San Francisco, CA, USA · ceecevanwest@gmail.com · +1 7042870556 · USA/UK Dual Citizen

EDUCATION

University of North Carolina at Charlotte
Bachelor of Science in Computer Science

Charlotte, NC
May 2022

- GPA: 3.85/4
- Minor in Mathematics
- Duke Energy Full Tuition STEM Scholarship Recipient

EXPERIENCE

SAP
Software Engineer

Palo Alto, CA
June 2022 - January 2025

- Developed full stack in Javascript (React, Node.js) and Python for a business-to-business sustainable marketplace web application, contributing to the creation of a robust and scalable application.
- Solely developed and deployed a Python web scraping microservice from the ground up, utilizing recursive web crawling functions to extract e-commerce listings and comprehensive textual and tabular data from client websites, and integrated it with Temporal.io workflows for simple management and integration with concurrent processes.
- Developed an adaptive marketplace web scraping functionality utilizing Langchain and GPT models to automatically generate configuration files from single e-commerce pages, allowing for efficient, autonomous and customizable web scraping from any site.
- Utilized Python libraries such as Pandas, NumPy, and Scikit-learn to clean, analyze, and model complex datasets, leading to data-driven insights and improved decision-making.
- Developed interactive dashboards in PowerBI and Tableau to visualize key performance indicators, enabling stakeholders to monitor business metrics in real-time.
- Automated data processing pipelines using Jupyter Notebooks and Python, reducing manual effort and increasing reporting accuracy by 30

CMR Surgical
Software Engineer

Cambridge, UK
August 2020 - August 2021

- Contributed to the end-to-end development of a surgical data visualization tool, built using Typescript and Python (React, Flask), which enabled the live tracking of robotic laparoscopic procedures. This enhanced cross-team collaboration and remote debugging efficiency, resulting in a significantly increased issue resolution time.
- Collaborated closely with multiple teams to identify and implement optimizations for data classification and filtering, resulting in a 30% improvement in surgical data accuracy.
- Wrote unit and integration tests increasing test coverage overall by 25% and reducing critical bugs by an estimated 20%.

London Stock Exchange Group
Technology Intern

London, UK
July 2020 - August 2020

- Participated in an immersive program, gaining practical familiarity with data science and machine learning tools. Collaborated with peers and engaged in hands-on learning to explore real-world applications of these tools in financial data analysis.

SKILLS

Languages:	Python, JavaScript/TypeScript, Java, Go
Full Stack Development:	React, Angular, Node.js, Flask, MySQL, PostgreSQL, MongoDB, GraphQL, AWS, Azure
Dev Tools:	Git, Docker, Kubernetes, Jenkins, Power BI, Tableau
