SUMMARY

Full Stack Software Engineer with 4+ years of experience building scalable, production-ready applications across e-commerce, SaaS, and internal systems. Proficient in modern web technologies including Node.js, Laravel, Vue.js, and React, with expertise in both backend architecture and frontend development. Passionate about clean code, comprehensive testing, and delivering solutions that solve real business problems. Proven ability to work independently or as part of a team, taking projects from concept to deployment.

Recently **designed, built, and launched BudgetBean**, a full-fledged SaaS platform featuring responsive Vue.js frontend, Laravel backend, AWS deployment, and Redis caching. Demonstrates ability to architect and deliver complete solutions using modern development practices and cloud infrastructure.

TECHNICAL SKILLS

Languages: JavaScript, PHP, SQL, HTML, CSS

Frameworks & Libraries: Node.js, Laravel, Vue.js, React.js, Inertia.js, Tailwind CSS

Databases: MySQL, Microsoft SQL Server, Redis, AWS DynamoDB

Dev Tools & Workflow: Git, Docker, Composer, NPM, Bitbucket, Vite, Webpack, Laravel Forge, Laravel Horizon, PhpStorm, VS Code, Linux, SSH, PHPUnit

Cloud & Infrastructure: AWS (Lambda, EC2, DynamoDB, CloudWatch, CloudFront, Route 53), Azure

Other Skills: REST API Development, Responsive Design, E-commerce Integrations, CI/CD, Agile, Project Management (Trello, Asana, Azure DevOps)

FLAGSHIP PROJECT

BudgetBean — Full-Stack SaaS Budgeting Platform

Laravel, Vue.js, MySQL, Inertia.js, Vite, Redis, AWS EC2, Plausible

budgetbeanapp.com | [GitHub](https://github.com)

- Designed and launched a gamified budgeting platform that transforms savings goals into a virtual garden, driving daily engagement among early users.
 - Built guest user functionality with persistent sessions to allow instant, frictionless exploration without account creation.
 - Implemented Redis caching to improve query performance and overall responsiveness.
 - Built with Laravel best practices, including PHPUnit testing for critical features, which caught regressions during development.
 - Developed a responsive Vue.js frontend with Inertia.js and Tailwind CSS, optimized for consistent use across mobile, tablet, and desktop.
 - Automated deployments via Laravel Forge with asset builds, migrations, and analytics integration to streamline releases.
-

JOB EXPERIENCE

Liberty Creative Solutions - Full Stack Developer

March 2021 – September 2025

- Developed a Node.js-based dynamic PDF generation system, reducing processing time from 3+ days to **15 minutes (99% improvement)** while automatically handling image downloads, database storage, and PDF compilation.
- Built an API integrating email campaign responses with warehouse fulfillment, automating **100%** of gift redemption processing and eliminating manual order coordination between healthcare provider and production team.
- Built internal reporting dashboards using Chart.js and SQL queries, serving **100+** client stakeholders and eliminating manual data pulls across multiple client accounts.
- Led migration of legacy Lumen projects to Laravel 12, improving maintainability and preparing the codebase for long-term scalability.
- Revamped an outdated client-employee communication platform using Laravel, resulting in a more intuitive system with positive beta feedback.
- Mentored junior developers through pair programming and code reviews, improving team code quality and development practices.
- Implemented Single Sign-On (SSO) across internal applications and collaborated on security enhancements with an external specialist.
- Used Laravel, Vue.js, Node.js, AWS, SQL, and Docker to deliver scalable, cloud-based solutions across a range of internal tools and client-facing apps.

Gabe & Co. - Freelance Full Stack Software Engineer

June 2020 – Present

- Built and maintained custom Laravel/Vue.js applications for small businesses, helping clients streamline operations and grow their digital presence.
- Developed a boat storage management system with booking automation and online payments, processing **\$2M+** in bookings across **2,000+** services and improving operational efficiency.
- Launched an online self-service portal for over **500** customers, saving an estimated **150+** hours of manual admin work annually.
- Delivered scalable products using Figma, Stripe API, AWS, and modern Laravel architecture.
- Managed project timelines, budgets, and client communication; led all phases of product development from planning to deployment.

ADDITIONAL PROJECTS

Mix & Mastering Services Site — SaaS-style e-commerce platform for a freelance music producer.

Laravel, Blade, MySQL, Vite, Stripe, PostHog

services.adrielrivera.com

- Supports checkout, coupon codes, client intake forms, and real-time audio demo previews.

Dude Where's My Money? — Lightweight React.js tool for splitting receipts with tax/tip calculations.

React.js, JavaScript, HTML, CSS

dudewheresmy.money

- Features dynamic inputs, shareable links, and a playful UX for casual group expenses.

EDUCATION

Lewis University *Computer Science* *Concentration in Software Engineering*
