

## DATA ENGINEER / DEVELOPER

**HARIPRIYA G**

Contact No: +1 (572)-208-8690

Email Id: [gamidiharipriya02@gmail.com](mailto:gamidiharipriya02@gmail.com)

LinkedIn: <https://www.linkedin.com/in/hari-priya-naidu-330733291/>

---

### Summary:

- Cloud Engineer with **5+ years** of expertise in **AWS (EC2, RDS, S3, Lambda)**, **GCP (Pub/Sub, Big Query, Dataflow, Cloud Composer)**, and **Azure (Databricks, Data Factory, SQL, Synapse)**. Proficient in **Talend** for data integration and quality, **MySQL** management, and task automation using **Unix/Linux shell scripts**. Skilled in **CI/CD using Jenkins, Git, and Ansible**, with hands-on experience in Hadoop (**HDFS, Hive, MapReduce**) and **x (NumPy, SciPy)**. Extensive background in **ETL** (Informatica PowerCenter), **Spark** for data warehousing, **Kubernetes** management, and **Snowflake SQL**. Experienced in **Databricks** (Unified Analytics, Delta Lake) and healthcare data standards (HL7 V2.x, 3.x, FHIR). Experienced with **WIFI data replication** API technologies and analytics using **HVR** or **Talend**.

### TECHNICAL SKILLS:

|                                  |                                                                                                                                                 |
|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| Cloud Platforms:                 | Azure, AWS, GCP                                                                                                                                 |
| Databases:                       | Oracle, MS SQL Server, PostgreSQL, NOSQL, MySQL 5.x, MongoDB, DBeaver, Mongo compass                                                            |
| Reporting Tools:                 | Excel, SQL Server Reporting Services 2012,2008, 2005, HVR, Data Quality Analyzer, Informatica MDM.                                              |
| Datawarehouse:                   | Cloudera, Spark, Hadoop, Snowflake, Google Big Query, Python, Hive                                                                              |
| Query Tools:                     | SQL Developer, SSIS, SQL Navigator, SQL* Plus, PL/SQL Developer, SQL Server, DB2, Oracle Data Build Tool (DBT)                                  |
| Operating Systems:               | UNIX, Windows95/98/NT/2000/XP/Windows10, Linux                                                                                                  |
| CI/CD & Frameworks:              | Jenkins, Docker, Kubernetes, Cradle, Terraform, fast Api's, Junit, Jasmine, JEST                                                                |
| Programming/Scripting Languages: | UNIX, SQL, PowerShell, Python, C, C++, Java, Scala, JavaScript, Typescript, Bootstrap, Linux, HTML, CSS, RESTful APIs, Golang, SOAP Webservices |
| Methodologies:                   | Software Development Life Cycle (SDLC), Agile, Testing and Implementation (UAT, system, integration), GIT                                       |
| Collaboration Leadership:        | Project planning, estimation, code review, technical expertise                                                                                  |

### Work Experience

---

#### **Senior Developer - Fulltime**

**HCL Technologies - Hyderabad, India**

**January 2022 to December 2022.**

**Client: NETAPP - Senior Data Engineer**

#### **Responsibilities:**

- Developed, tested, and supported large-scale databases** for high-volume transactional applications, ensuring efficient data storage, retrieval, and processing.
- Created key database objects** such as **Tables, Views, Triggers, Indexes, Stored Procedures, and User-Defined Functions**, optimizing database structure for performance and maintainability.
- Led **Data migration** projects from **SQL Server**, ensuring data consistency and accuracy through validation techniques, managing large datasets efficiently.
- Developed AMDS/EDM (Analytical Master Data Services / Enterprise Data Management) solutions** to manage hierarchical and reference data, ensuring data standardization and governance.
- Designed and deployed infrastructure as code (IaC) solutions using **Terraform** for consistent and scalable **AWS environment** setup. Wrote services to store and retrieve user data from the MongoDB for the application on devices.
- Designed and developed large-scale enterprise databases** by creating optimized schemas, indexing strategies, and data partitioning techniques to enhance query performance and scalability.
- Developed complex T-SQL queries** with Dynamic SQL, Common Table Expressions (CTEs), and Window Functions to handle large data processing and transformation tasks efficiently.
- Responsible for handling Deployments for Install base Data platform (IBDP), Contact Master, MDM-Colibra, NextGen Firewall and Recon in Production and Month end activities.
- Designed and implemented end-to-end scalable data pipelines using **Python** and **PL/SQL** to process and transform **large datasets** from multiple sources into **relational databases** and data lakes on AWS/GCP.
- Optimized T-SQL code** using execution plans, indexing, and performance tuning techniques, reducing query execution time by over **50%** in critical reporting and transactional systems.
- Utilized SQL Server tools** like Profiler, Execution Plans, and Performance Monitor to analyze and optimize database performance, identifying and resolving bottlenecks.
- Optimized **PL/SQL queries**, reducing query runtime by **50% for reporting** and analytical dashboards.
- Implemented data integrity constraints** with **Triggers, Constraints, and Auditing Mechanisms**, ensuring data consistency and compliance with business rules.
- Performed user acceptance testing (**UAT**) and postproduction validation for software deployments.

- Developed and executed comprehensive testing and implementation plans, covering unit, system, integration, and **UAT phases** to ensure seamless project rollouts.
- **Developed and automated SQL jobs** using **SQL Server Agent** to schedule database maintenance, ETL processing, and data synchronization across environments.
- **Troubleshoot and resolved complex database issues**, including deadlocks, blocking queries, and performance degradation, ensuring high system availability and efficiency. Design approval workflow using BPM in **Oracle Fusion Application**
- **Designed and implemented advanced indexing strategies** using clustered and non-clustered indexes, covering indexes, and filtered indexes to enhance data retrieval performance.
- Worked with a team to **migrate** SQL Server from Legacy/On Prem environment into AWS.
- Developed and optimized ETL processes with **SQL Server Integration Services (SSIS)** to build a comprehensive data warehouse solution, managing data extraction, transformation, and loading for business-critical applications.
- Ensured data integrity by troubleshooting and resolved system mismatches. Streamlined ticket management using **SNOW(Service-now)** application to improve efficiency and customer satisfaction.
- Collaborated with cross-functional teams to integrate **Terraform** into **CI/CD** pipelines, streamlining infrastructure deployment processes.
- Designed and developed POCs in Spark using Scala to compare the performance of Spark with **Hive** and **SQL/Oracle cloud dataproc** and **Apache airflow** services.
- **Implemented dynamic SQL solutions** to handle **parameterized queries, flexible reporting, and metadata-driven automation** in SQL Server environments.
- Developed and **deployed Java** applications using **Jenkins**, leveraging the AWS Code Deploy plugin for seamless deployment to AWS. Additionally, managed and optimized AWS Cloud services to support application infrastructure.
- Developed **Data Factory pipelines** to automate the ingestion and transformation of structured and unstructured data from multiple data sources. Connected to **AWS S3** using **SSH** and ran **spark-submit jobs**
- configured cloud run environments, including VPCs, IAM roles, and security groups, to support **Databricks operations**.
- Integrated Python scripts with **Airflow** for orchestrating data workflows and monitoring pipeline performance.
- Written automation scripts for creating resources in **OpenStack cloud** using **Python, R** and **terraform modules**.

Environment: AWS, S3, SQL, Azure Data Lake, Collibra, MDM, Informatica, HVR, ETL, Oracle cloud, Lambda, Terraform, Redshift, Service-Now, DBT, MongoDB, Machine Learning, Big Query, Apache Spark, HBase, Apache Kafka, Python, Pyspark, Azure Repository, NoSQL, ETL.

**Software Developer / Data Engineer - Fulltime**  
**Caliber - I Technologies Pvt Ltd. - India, Hyderabad**

**November 2020 – December 2021.**

**Responsibilities:**

- Applied Software Project Management (**SPM**) principles to oversee project lifecycles, including planning, execution, monitoring, and stakeholder communication.
- Designed data models and authored **Source-to-Target Mapping (STTM)** documents for **seamless data migration**.
- **Designed and implemented database partitioning strategies** to improve **query performance and data manageability** for large transactional datasets.
- Utilized **Git** and **Azure Repositories** for version control, resolving merge conflicts, and leveraging Spark-SQL in Databricks to extract, transform, and analyze data for customer insights.
- **Developed ETL solutions** using **SQL Server Integration Services (SSIS)** to extract, transform, and load large datasets between on-premises and cloud-based systems.
- Published many reports and **visualizations** created to the **Power BI** service and thereby develop dashboards.
- Migrated database using SQL Server Integrations Services (SSIS) and Data Transformation Services (DTS Packages).
- Managed build automation and dependency management using Gradle, optimizing project configurations for CI/CD pipelines.
- Migrated previously written cron jobs to airflow (**Dagster**) /**composer in GCP**.
- Integrated with GCP BigQuery for storing and querying large volumes of structured and semi-structured data, enabling **ad-hoc analytics** and reporting & created the views using the **LookML**
- **Implemented security best practices** by **configuring roles, permissions, and encryption** to ensure data protection and compliance with organizational security policies.
- **Integrated third-party monitoring and optimization tools**, such as **SolarWinds, Redgate SQL Monitor, and Idera SQL Diagnostic Manager**, for proactive database performance monitoring and tuning.
- Developed and optimized complex **Snowflake SQL scripts** for data extraction, transformation, and loading (ETL) workflows.
- Building/Maintaining Docker/ Kubernetes container clusters managed by Kubernetes Linux, Bash, GIT, Docker, on GCP
- Designed and implemented data pipelines, initially for SQL Server and later migrating to Snowflake, ensuring efficient data flow, transformation, and loading.
- **Automated database deployments and migrations** using **SQL Server Data Tools (SSDT)** and **CI/CD pipelines in Azure DevOps**, reducing deployment errors and improving release efficiency.
- Transformed and analyzed large sets of data by running Hive queries and Apache Spark with Scala.
- Migrated on-premises SQL Server databases to SQL Database leveraging Azure Data Migration Service.
- Worked on integrating DBMS (SQL Server, Oracle, DB2) and RESTful APIs to ensure seamless data flow across systems.
- Planning and performing **MongoDB** and **PostgreSQL** database upgrades and migrations from master data management.
- Utilized **Python libraries** such as Pandas and NumPy for advanced data processing and manipulation in analytics workflows.
- Worked on scheduling all jobs using Airflow scripts using python. Adding different tasks to DAG's and dependencies between the tasks.

- **Developed stored procedures for real-time data processing and reporting**, optimizing data aggregation, transformation, and analytics for business intelligence applications.
- Perform Data Cleaning, features scaling, features engineering using pandas and numpy packages in python.
- Developed predictive analytics with PySpark and Spark SQL on Databricks to transform raw data into actionable insights.
- Responsible for loading data into S3 buckets from the internal server and the Snowflake data warehouse.
- Automated OpenStack and AWS deployment using Cloud Formation, Ansible, Chef and Terraform.
- Significant experience in automation and scripting using Jenkins, Maven, Docker, Git, Bash, JIRA, Artifactory, and Dynatrace on Linux/Unix.
- Developed backup strategies and implemented geo-replication for disaster recovery in Azure SQL.
- Used Agile (Scrum) Methodology for rapid and more disciplined development during implementation.
- Improved query performance by implementing **Snowflake clustering** keys and optimizing resource usage for large datasets.
- Used **GitHub** for version control of the source code along with the maintenance of the builds and the relevant documents. Writing Restful Web Services to expose all the services.
- Supported the development of **ETL processes** for large-scale data ingestion using **Python and SQL**.
- **Led database migration projects from SQL Server 2008/2012 to newer versions or cloud-based platforms** such as **Azure SQL Database and AWS RDS**, ensuring seamless data transitions.

**Environment:** Azure SQL, NoSQL, MDM, Azure Data Bricks, Redshift, Hive, Informatica, Dagster, Python, Informatica, ETL, Pyspark, Apache Kafka, Spark, Cloud Composer, Eclipse, GitHub, Java, Scala, Spring Boot, NoSQL, Bluetooth, Restful web Services, My SQLDB.

**Process Associate Data Engineer - Fulltime**  
**Hinduja Global Solutions – Hyderabad, India**

*September 2019 – October 2020*

**Description:** This project is built based on Concur Application for analysis and administration data process for Healthcare and Telecommunications.

**Responsibilities:**

- Employed Git in project development to manage version control, facilitate collaboration, and streamline branching, merging, and conflict resolution processes.
- Engaged in IT Service Management (ITSM) practices, contributing to incident management, change management, and service improvement initiatives.
- Implemented **Snowflake**-specific features like **cloning**, time travel, and data sharing to enhance storage management and historical data access.
- Worked on **AWS Data Pipeline** to **configure** data loads from **S3** to into **Amazon Redshift**.
- Built reusable **Python modules** to automate tasks such as **schema validation**, data cleansing, and error logging.
- Integrated **Azure SQL with Power BI** for building real-time business intelligence dashboards.
- Implemented a Python-based distributed random forest via PySpark and MLlib
- Used **Cloudera Manager** for continuous **monitoring** and **managing** of the Hadoop cluster for working application teams to install operating system, Hadoop updates, patches, **version upgrades** as required.
- In the preprocessing phase of data extraction, we used Spark to remove all the missing data for transforming data to create new features.
- Debugged and optimized Python-based workflows, reducing execution times by 20% for data processing tasks.
- Worked on AWS services utilized to deploy this service such as, Virtual Private cloud (VPC), VPC networking, Elastic Load Balancers, Route53, EC2, Security Groups, Auto-scaling, CloudWatch and S3, RDS.
- Implemented **CloudTrail** in order to capture the events related to **API calls** made to **AWS infrastructure**.
- Importing & exporting database using SQL Server Integrations Services (SSIS) and Data Transformation Services (DTS Packages).
- Developed jobs, components and Joblets in **Talend**. Designed ETL Jobs/Packages using Talend Integration Suite (TIS).
- For the data exploration stage used Hive to get important insights about the processed data from HDFS.
- Wrote service method and SQL queries, PL/SQL to interact with Oracle DBMS.
- Developed ETL pipelines in and out of **data warehouse** using a combination of Python and Snowflake & Writing SQL queries against Snowflake. Integrated Hashi corp Vault via Terraform.
- Used **Pandas** as API to put the data as time series and tabular format for manipulation and retrieval of data.
- Designed and implemented data ingestion pipelines from SQL Server, Oracle, and Kafka, ensuring smooth data extraction and transformation for machine learning and analytical workflows in Azure environments.
- Created various Parser programs to extract data from Business Objects, XML, Informatica, Java, and database views using Scala.
- Integrated Java-based microservices with cloud platforms and data lakes for real-time data processing and analytics.
- Developed Spark applications using Spark – SQL in Databricks for data extraction. Responsible for the execution of big data analytics, predictive analytics.

**Environment:** Slack, GIT, SQL, Tableau, Apache Airflow, GCP, Dagster, Matillion, ETL, DBT, Spark, Redshift, Apache Kafka, Oracle, Snowflake, Informatica, Python, SSIS, Big query, Hadoop, Java, ITSM, Golang, Hive, Pig, My SQL, Oracle, Spark, Scala, Pyspark, HDFS, Oozie, No SQL.

**Data Engineer - Fulltime**  
**PruTech Solutions India Pvt. Ltd - Hyderabad, India**  
**Project: Hirelytic**

*March 2018 – July 2019*

**Responsibilities:**

- Implemented ETL pipelines within Databricks for transforming raw data into actionable insights, utilizing Delta Lake for reliable data management.
- Automated data workflows using Apache Airflow and Talend, ensuring timely availability of data for analytics and supporting real-time data integration.
- Familiar with leveraging IDE-specific plugins and tools to enhance productivity, such as code refactoring, version control integration (Git/SVN), and automated testing setups.
- **migrated** and managed multiple applications from on premise to cloud using **AWS services** like S3, Glacier, EC2, RDS, SQS, SNS, SES, Cloud Formation, **VPC** etc.
- Developed scalable ETL solutions for ingesting and processing large datasets from SQL Server, Oracle, and Kafka, optimizing data flow and storage in cloud-based data lakes using Azure Data Factory and Databricks.
- Experience in designing and developing POCs in Spark using Scala, python to compare the performance of Spark with Hive and SQL/Oracle.
- Involved in designing database Model, API's, Views using python to build an interactive web-based solution.
- Used SSIS to build up high performance data integration solutions including extraction, transformation and load ETL packages for data warehouse.
- Built distributed data processing solutions using Hadoop and Spark to handle terabyte-scale datasets, ensuring high performance and low latency.
- Used Python and Pandas library, built data analysis graph for documentation and record.
- Creating the repositories specific to the application for storing the code specific application Dataflow pipelines using Apache Beam API in Java.
- Designed and Developed **Spark workflows** using Scala for data pull from **AWS S3** bucket and Snowflake applying transformations on it.
- Managed **Infrastructure as Code (IaC)** for cloud resources, optimizing cost and performance through modular and reusable Terraform scripts.

Environment: AWS, Typescript, Matillion, GCP Composer, Snowflake, DBT, Golang, Apache Kafka, Oracle, Big query, SQL, Terraform, JIRA, Python, Oozie, Redshift, MDM, Java, Hive, Spark, Spring, Hibernate.

#### **Educational Details:**

##### **Master of Science in Information Studies**

Trine University, Angola, IN

January 2023 - May 2024

GPA: 3.6

##### **Bachelor of Science**

ST. Ann's College for Women, [Hyderabad, India] 2015 - 2018

CGPA: 8.0

#### **Certifications:**

- "AWS Certified Cloud Practitioner (CLF-C02) Cert Prep: 2 Security and Compliance"

#### **Key Achievements:**

- Spearheaded the migration of on-premises data workflows to AWS, cutting infrastructure costs by 20% while improving system uptime to 99.8%.
- Reduced replication downtime by 50% through proactive monitoring and performance tuning of HVR pipelines.
- Enhanced the data processing pipeline reliability by implementing robust error-handling mechanisms, reducing downtime by 25%.
- Streamlined legacy Python scripts for data manipulation, improving maintainability and reducing lines of code by 40%.
- Collaborated with cross-functional teams to design data solutions for predictive analytics, enabling a 15% increase in operational efficiency.

#### **Responsibilities Highlighted in Projects:**

- Designed and maintained scalable data pipelines to support business-critical analytics workflows.
- Developed Python scripts for data extraction, transformation, and integration with cloud services.
- Optimized database queries using PL/SQL for high-volume data processing.
- Performed thorough data validation and profiling to ensure data integrity and compliance.
- Debugged complex data workflows, ensuring continuous operation in dynamic environments.
