

Gauri Doiphode

206-602-9953 | Seattle, Washington | gauridoiphode@outlook.com | [linkedin.com/in/gauridoiphode](https://www.linkedin.com/in/gauridoiphode)

SUMMARY

Recent **Master's** graduate in **Information Systems** with a strong foundation in commerce and law. Skilled in **Python, SQL, and data visualization** with a focus on transforming data into actionable insights.

SKILLS

- **Programming & Analytics:** Python (Pandas, NumPy, Scikit-learn, Matplotlib), SQL (MySQL), Excel (Solver, TreePlan, CrystalBall)
- **Data Visualization:** Power BI, Tableau, Matplotlib
- **Machine Learning & Modeling:** Linear Regression, Random Forest, Clustering, TensorFlow, CNNs
- **Database & Cloud:** MySQL, Data Warehousing Concepts, Database Design & Modeling
- **Tools & Platforms:** Google Collab, Visual Studio Code, SQL Developer

EDUCATION

Master of Science in Information Systems	University of Washington	June 2025
Bachelor of Commerce	University of Mumbai	May 2017
Bachelor of Law	University of Mumbai	June 2020

EXPERIENCE

Legal Analyst & Junior Lawyer – Nitin Satpute and Associates (Jan 2022-June 2022)

- Analyzed case files, extracted key insights, and identified trends to inform legal strategies
- Managed and organized large volumes of legal documents, ensuring accuracy and reliability
- Drafted and summarized legal documents, developing strong skills in data reporting and presentation.

PROJECTS

Skin Cancer Classification Using Deep Learning (Python, TensorFlow, Keras, NumPy, Matplotlib)

- **Achieved a high-accuracy CNN model for skin cancer detection**, increasing classification precision by 15% compared to baseline.
- Developed and deployed a CNN-based image classification pipeline using TensorFlow and Keras.
- Implemented data preprocessing and image augmentation to improve model generalizability and robustness.

Predicting House Prices in King County (Python, Pandas, NumPy, Scikit-learn, Matplotlib, Google Collab)

- **Created a predictive model with an R^2 of 88.2%**, enabling targeted marketing strategies based on key features like square footage and renovation history.
- Conducted extensive EDA and feature engineering on a dataset of 21,000+ properties.
- Applied hierarchical clustering to segment properties into value tiers for better pricing decisions.

Unlocking Insights from Shopping Data (SQL (MySQL), Excel, Tableau)

- **Delivered actionable business insights on customer spending behavior**, helping stakeholders identify high-frequency shoppers and regional purchasing trends.
- Analyzed 3,900 transactions using advanced SQL techniques (window functions, aggregations, partitioning).
- Created interactive Tableau dashboards to visualize insights and support strategic planning.

CERTIFICATIONS

- Excel Spreadsheet Software Course by UW Foster School of Business, Programming in Python by Meta
