

Gedeon Niyonsenga

Arizona, United States ✉ gedeon0607@gmail.com ☎ (972) 903-9498 🌐 <https://linkedin.com/in/gedeon-niyonsenga>

SUMMARY

Accomplished software engineer with 5 years of experience in developing, deploying, and maintaining business-critical enterprise software as key member of elite technical teams. Highly versatile; constantly developing expertise in new and emerging technologies. Hands-on experience in software development and testing using core Java, Experience working with Databases such as SQL and Non-SQL like Mongo DB and cosmos Database. Adaptable team player with talent for collaboration and communication with diverse technical and cross-functional teams, highly motivated self-starter with excellent presentation; problem-solving skills and committed to learning new technologies.

EDUCATION

Master of Science in Computer Science, Maharishi International University, Fairfield, Iowa, United States

Key Courses: Fundamental Programming practices, Modern Programming practices, Database management system, Web Application programming, Enterprise Architecture, Algorithms, Software Architecture, Mobile Development Application, Big data and Web Application Architecture framework.

Bachelor of Science in Electronics & Telecommunications Engineering, Kigali Institute of Science & Technology, Kigali, Rwanda

SKILLS

Languages: Java 21,17,11,8,7,6,1.5

Web: HTML5, CSS3, JavaScript, Bootstrap, Servlets, JSP

Web Services: REST, Microservices

Web and Application Servers: Apache Tomcat **Frameworks:** Spring MVC, Spring Boot, Hibernate, Mockito, OneTrust which is a **platform** designed to help organizations manage data privacy, security, and governance which uses Freemarker language to write scripts

Databases: Cosmos Db, SQL Server MS, MySQL, MongoDB

Tools: Eclipse, IntelliJ, Visual Studio code, Maven, Git, StarUml, Postman, swagger, scenebuilder, Spring Tool Suite (STS), Docker, kubernetes, Kafka, Jenkins, RabbitMQ, AtiveMQ

Platforms: Windows, Apple

SDLC: Agile, Scrum

PROFESSIONAL EXPERIENCE

PEARSON VUE

01/31/2024 - Present

Software developer (US Lead)

Key Responsibilities:

- Developed secure, scalable software solutions for Pearson VUE's testing platforms, enhancing exam delivery and user interaction across web applications.
- Designed and implemented microservices using Core Java and Spring Boot, with a central utility service that provides shared libraries and functionalities.
- Utilized SQL databases (Squirrel SQL Client) to manage data and ensure efficient database interactions.
- Wrote and maintained unit tests using JUnit and Mockito, ensuring high-quality code.
- Automated testing using Gauge for specification-driven tests, improving testing accuracy and efficiency.

Key Technologies & Tools:

- Languages & Frameworks: Java, Spring Boot
- Database: SQL, Squirrel SQL Client
- Testing Frameworks: JUnit, Mockito, Gauge
- CI/CD: GitHub, TeamCity, Azure, Udeploy

Achievements:

- Streamlined CI/CD processes, automating builds and deployments via TeamCity and Udeploy, improving release efficiency.
- Optimized backend services, contributing to high system availability and better performance.
- Collaborated across teams (DevOps, QA, Product) to ensure smooth deployments and reduce manual intervention.

WALMARTLABS, CA, USA.

09/29/2021 – 01/31/2024

Software Developer

I worked in a team from W+ called Streaming, where I have contributed on a project which was called partner service, which is like the orchestration layer between Walmart systems and external partners' applications, and according to the partners API contract, we onboard them and pass through authentication steps to invoke Walmart API. After that for that specific partner, we do internal development in core service to connect that partner to other services like payment, so that when you pass through Walmart app, you see that partner logo and when you signup through Walmart app, you get discount and more benefits.

- Worked in Walmart Plus teams where my last team is called MCAM-SPRK
- The projects I have worked on are included: core service, Renewal-engine service, and Event-processor service.
- Worked in Walmart International team as well and I was backend Developer.
- My last project in International team was called grs-sales posting which was one module in multimodule spring boot project called oms-integrations, my task was to convert the whole functionalities from camel framework to rest call services where it used timer to trigger once in a day a call from SQL db using dynamic query to fetch a record, apply some mapping and filtering and then save those records in local directory and after upload the record in sftp server where other team use to download those records every day.
- I use core Java, J2EE in Spring Boot, ORM frameworks like Hibernate, Cosmos dB, SQL db, Kafka, as technologies in my tasks and write unit test cases using Junit and Mockito frameworks
- Used postman and swagger API endpoints.
- Experience in CI/CD using GitHub, Looper (Walmart CI tool which built on top of Jenkins), SonarQube and Contributing to all phases of the software development lifecycle.
- Experience using pcf and rlm in deployment.

Walmart Projects/microservices: I also worked on to add new features and to fix some bugs.

1. Driver Metrics: used to calculate driver's trips data and Information.
2. Pricing: calculate the earnings of all drivers
3. Driver Messaging: notification platform (Ntransit) for iPads in Walmart trucks
4. Spark Notification platform: communication platform for drivers who works for Walmart.
5. Driver earning Adjustment: new project which was not yet deployed, there is a rule called proposition 22 where all employees who works in California zones must be paid amount, which is greater than minimum wage, so that raw is being applied also for Walmart drivers in California, I worked on that project to implement the mechanism to detect all CA zones drivers have worked in and compare their earnings with minimum wage, if the total amount per zone are less than minimum wage, we had to calculate the difference and Walmart has to pay that amount.
6. Ship confirmation: to confirm that the order has been shipped.
7. Carrier notification: to generate notifications across the Walmart network.
8. Ch-updates: consumes events from one service and do some filtering and publish the new payload to Kafka topic
9. Grs-sales posting : consumes from topic and send records to vendors and save that record in db
10. Mx-host-po: deals with purchase order receipts creation

BANK OF KIGALI, Kigali, Rwanda

2014 - 2020

Commercial bank licensed by National Bank of Rwanda.

Software Engineer (ATM)

- Worked on ATM services and digital payments.
- Use core Java and J2EE technologies to develop web application for client server environments and add functionalities to existing applications.
- Proficient in implementation of frameworks like Spring, Spring MVC, Spring Boot, and ORM frameworks like Hibernate.
- Developed highly interactive web applications and customized UIs using HTML. CSS, JSP, JavaScript, jQuery, and Bootstrap
- Ensuring designs comply with specifications.
- Contributing to all phases of the software development lifecycle

Technologies Used: Eclipse, Vs code, MySQL, Java, HTML5, CSS3, Spring, Spring boot, Bootstrap, postman, swagger, Git.

IT Support Technician

Assisted in creating and maintaining software of region-wide ATM network for Bank of Kigali.

- Installed and configured ATMs; implemented solutions that minimized network downtime.
- Installed updates to enhance availability of technical services.

ACADEMIC PROJECTS

Bug Management System (Maharishi International University, 2021): Developed application as member of 5-person team that allowed developers to manage change requests and product issues.

- **Technologies Used:** Java, MySql, Tomcart, JavaFx

The EasyDrive School of Motoring (Maharishi International University, 2021): Database project

- **Technology used:** Sql server management studio, star uml.

Attendance-tracking system (Maharishi International University, 2021): Developed application as member of 5-person team that allowed faculty to keep track of how many students attended classes, make reports from data saved in database.

- **Technology used:** IntelliJ, java, MySQL, Tomcat, Maven, Postman, spring boot, swagger, GitHub.

PROFESSIONAL DEVELOPMENT

Java Tutorial for Beginners: Udemy

Advanced Function Dispenser 2.0: Diebold Nixdorf (Germany)
