Linkedin: <https://www.linkedin.com/in/geethajavvaji/>

Summary

- Experienced Python Developer with 4 years of experience in python full-stack development, specializing in both frontend and backend solutions.
- Proficient in **Django**, **FastAPI**, and Flask frameworks, with expertise in implementing in-built forms for user input, authentication, and interactive web solutions.
- Skilled in developing and optimizing database models, **APIs**, and business logic to create robust, scalable applications.
- Strong understanding of Resilient Distributed Datasets(RDD) and Dataframes in PySpark enabling efficient data manipulation.
- Knowledge of **python**, **AWS**, Django framework for web development.
- Extensive experience in leveraging **PySpark** for large-scale data processing and transformation tasks.
- Advanced use of **Pandas** and **NumPy** for data processing, statistical analysis, and creating efficient data pipelines.
- Proficient in PySpark, the python API for apache spark for scalable and distributed data processing.
- Automated **CI/CD** pipelines using Jenkins, improving deployment efficiency and reducing manual effort.
- Containerized applications with **Docker** to ensure consistency across development, testing, and production environments.
- Proficient in writing **Python** programs to create web services.
- Enhanced database performance by creating and refining stored procedures, functions, Triggers, Subqueries and optimizing **SQL** queries.
- Involved effectively in handling releases, managing merges, and deployments.
- Designing and implementing end -to end ETL pipelines using Pyspark for efficient data extraction, transfaormation, loading.
- Experienced in troubleshooting and debugging production issues, ensuring minimal downtime and smooth operation.
- Adopted **Agile** methodologies, actively participating in sprint planning, standup meetings, and iterative development processes.

Technical Skills

Languages:	Python , Shell Script, Java, C#, Ruby, C/C++, SQL, PHP
Frameworks:	Django, Flask, FastAPI, Pyspark
Python Libraries:	Pandas, Numpy, Scikit-Learn, Matplotlib, Plotly, tensorflow
Databases:	SQL, MySQL, PostgreSQL, SQL Server
Web Technologies	HTML5, CSS3, Java Script, AWS, Jenkins
Versioning Tools	Git, Github Desktop
Tools	Jupyter Labs, SQL Server Management Studio, Visual Studio Code

Certifications

- Microsoft Azure Fundamentals - AZ900
- R Programming from Coursera

Education

Masters in Computer Science
Southeast Missouri State university - Missouri

Aug 2022 – Dec 2023

Professional Experience

VKore Solutions LLC
Python Developer

Loc: Austin, TX
Jan 2023 – Present

- Worked on creating Python-based database models, **APIs**, and views in order to provide an interactive web-based solution.
- Used python to create the business logic, together with the **FastAPI** and **Flask** frameworks.
- Utilized Python to construct Planning and Tracking functions utilizing Business Logic.
- Enhanced database efficiency by creating new **Stored Procedures** and refining existing ones to boost overall performance.
- Responsible for Analysis of existing application code and prepare the requirements for user stories.
- Used **Pandas** library for statistical Analysis.
- Developed entire frontend and backend modules using **Python** on Django Web Framework.
- Participated in troubleshooting, debugging, and resolution of production issues.
- Used Git Lab and Github Desktop as the source version control tool for code operations such as check-in, check-outs, merge, compare, clone, etc.
- Supported the **CI/CD** pipeline processes, automating testing and deployment using jenkins , leading to a 15% increase in deployment efficiency.
- Leveraged **Docker** to containerize applications, ensuring consistency across development, testing, and production environments.
- Utilized **Pandas** to manipulate and analyze large datasets, creating efficient data pipelines that reduced processing time by 40%
- Worked closely with cross-functional teams to design and implement software features, participated in code reviews, and provided constructive feedback to improve code quality.
- Involved in **Agile** - Sprint methodologies to do requirements gathering, analysis and planning.

Environment: SQL Server, MySQL,Django, FastAPI, Python,Pandas, Matplotlib, RestAPI'S,Streaming,Jenkins,Docker,Openshift,Agile, Jira, Rally, Scrum,Git,AWS,Gitlab

Optum(United Health Group)
Associate Software Engineer

Loc: Hyderabad, India
May 2020– Jul 2022

- Assisted in developing Python scripts using **Pandas** and **NumPy** for data processing and analysis, handling large datasets with ease.
- Developed server by using Django framework, writing routes and queries to build Restful API.
- Involved in writing scripts using python modules and its libraries like **NumPy**, Matplotlib, **Pandas** to develop programs that improve processing of access requests.
- Developed Python scripts to efficiently update database content and automate file manipulation tasks, streamlining data management processes and reducing manual workload.
- Involved in Developing a **Restful API'S** service using **Django** framework.
- Wrote python scripts to parse **XML** documents and load the data into database.
- Involved in automating data movements using python scripts, involved in splitting, validating, and processing of files.
- Proficient in crafting stored procedures, functions, views, and triggers for **SQL** Server databases.
- Conducted Query Optimization and Performance tuning in **SQL Server**, resulting in significant code performance enhancements.
- Timely resolution of system issues/bugs to maintain operational efficiency.
- Utilized **SonarQube** for comprehensive code analysis, identifying and rectifying code smells and bugs to improve code quality.
- Implemented real-time data processing solutions using **PySpark** Streaming, enabling the organization to respond swiftly to changing data.
- Created Bulk fake data that is required to the project using python **faker** libraries which is used for performance testing ensuring accurate simulations.
- Utilized Git for version control, maintaining code integrity and facilitating collaboration across the development team.
- Developed internal auxiliary web apps usingpython Flask framework with Angular.js and Bootstrap, CSS.
- Wrote python scripts to parse XML documents and loaded the data in database.
- Applied SQL Profiler for real-time monitoring and analysis of extended-duration queries and stored procedures to optimize database performance.
- Followed Agile Methodology with a 2-week sprint process, which included iterative application development, standup meetings, planning sessions, elaboration sessions and customer reporting.

Environment: PostgreSQL, SQL Server,Django, Python,Pandas, NumPy, Matplotlib, XML, Rest API'S, PySpark, CSS,Bootstrap, Streaming,Jenkins, SonarQube ,Agile, Jira, Rally, Scrum

KL University
Student teaching Assistant

Feb 2019 – Nov 2020

- Designed and implemented advanced lab programs for Data Science, Data Warehousing, and Data Mining, leveraging Python and R to create efficient and scalable solutions.

- Provided mentorship to peers, offering guidance on Python programming, data analysis techniques, and best practices for completing lab experiments and academic projects.

Academic Project Experience

- **Toxic Comment classification**

August'2023

- Conducted an in-depth comparative study of five machine learning algorithms using Python for the development of a Toxic Comment Classification model.
- Implemented data preprocessing techniques with Pandas and utilized NumPy for efficient data manipulation. Evaluated algorithm performance with the F1 score, where Support Vector Machine (SVM) demonstrated the highest F1 score, showcasing its effectiveness.
- Employed scikit-learn for model training and evaluation, and visualized results using Matplotlib, enhancing the interpretability of the model's performance.

- **Cancer Tumor Malignancy Prediction**

Nov'2019

- Developed a comprehensive model using Python and leveraging neural network architecture with TensorFlow and Keras to accurately predict tumor malignancy.
- Incorporated advanced data features through data wrangling with Pandas and optimized model performance using iterative refinement techniques.
- Employed techniques such as hyperparameter tuning and cross-validation to enhance predictive accuracy. Utilized visualization libraries like Seaborn to analyze data distributions and present insights, effectively communicating findings to stakeholders.
