

Harini Mulakala
(314) 591-7151
SQL/BI Developer
Harini170220@gmail.com

Professional Summary

- Over **4+** years of IT experience specializing in Database and **Business Intelligence** (BI) technologies with a strong focus on ETL processes and reporting using SQL Server (2016/2014/2012/2008R2/2005), **SSIS**, and SSRS.
- Proficient in building and implementing data engineering pipelines using Azure services like Azure Data Factory, Azure Data Lake Storage, Azure Data-bricks, and Azure Synapse Analytics.
- Extensive experience in building interactive dashboards in Tableau, along with performance tuning and issue resolution on Tableau Server.
- Expertise in developing **ETL** interfaces using **SSIS** and generating enterprise-level reports with SSRS using the latest versions and features.
- Solid understanding of database design methodologies, including normalization/de-normalization and Normal Form.
- Strong ability to write complex SQL queries, including sub-queries, dynamic queries, and joins for creating stored procedures, triggers, user-defined functions, indexes, views, and cursors.
- Experienced in working with Azure cloud platform and AWS services, including AWS Glue and EMR, for data extraction and transformation.
- Proficient in the full cycle of **DTS/SQL** Server Integration Services including development, deployment, scheduling, troubleshooting, and monitoring for data transfers and ETL purposes.
- Highly skilled in using **T-SQL** for developing complex stored procedures, triggers, tables, functions, user profiles, relational database models, and data integrity.
- Extensive hands-on experience creating indexed views, stored procedures, functions, and triggers to ensure efficient data manipulation and consistency.
- Expertise in using SQL Profiler and Windows Performance Monitor to monitor and optimize SQL Server performance.
- Provided strategic Azure technical expertise, including design, architectural mentorship, assessments, and POCs to support sales life cycle or consulting engagements.
- Experience deploying **SSIS** packages using both the Legacy deployment model and the newer Project Deployment Model from SQL Server 2012 via **SSISDB** catalog, including configuring project parameters and environments.
- Strong knowledge in Power BI, including importing, shaping, transforming data for BI, visualizing data, authoring reports, scheduling automated refreshes, and creating and sharing dashboards.
- Extensively used custom R-Visuals, Clustered Bar Charts, Donut Charts, Hierarchy Slicers, Waterfall Charts, Scatter Charts, Area Charts, and KPIs in Power BI reports.
- Hands-on experience with database administration across various environments (production, staging, test, development), including installation, configuration, maintenance, monitoring, backup, disaster recovery, and replication.
- Proven ability to collaborate effectively within teams, with excellent verbal, written communication, and interpersonal skills.
- Expertise in developing and extending MSBI solutions, including SQL Cubes, Dimensions, Data Source Views, and SQL Data Mining Models, as well as deploying and processing **MSBI SQL** objects.
- In-depth experience in Data Extraction, Transformation, and Loading (ETL) using tools such as SQL Server Integration Services (SSIS), Log Shipping, Bulk Insert, and BCP.
- Demonstrated ability to develop, monitor, and deploy SSIS packages, along with performing database administration tasks such as installation, configuration, and monitoring.

Education

- Master of Science in Cybersecurity & Data Analytics, Webster University.

Technical Skills

Data Warehousing & BI	SQL Server BI Studio (SSIS, SSRS, SSAS, DTS)
Databases	SQL Server (2016/2014/2012/2008R2), MySQL, PostgreSQL, AzureSQL, Oracle, MS- Access, Azure Cosmos DB
ETL & Data Integration	SSIS, Azure Data Factory (ADF), Azure Databricks (ETL using PySpark, Pandas), Data Warehousing (Star Schema, Snowflake Schema)
Reporting & Visualization	SSRS , Power BI (Data Modeling, DAX, Power Query),Tableau, QlikView, Excel
Cloud Technologies	Azure Data Lake Storage, Azure Blob Storage, Azure Synapse Analytics AWS (AWS Glue, S3, Redshift)
Version Control & Deployment	Git, Azure DevOps, Jenkins
Automation & Monitoring	SQL Server Agent Jobs, SSIS Job Scheduling, SQL Server Profiler
Scripting & Programming	T-SQL, C#, VB.Net for ETL scripting, Python, DAX, MDX
Data Analysis & Quality	Data Profiling, Cleansing, Data Quality Rules
Operating Systems	Windows Vista/NT/XP, Windows Server, Unix, Linux
MS Office Suit	Word, Excel, Access, Visio, MS Project

Professional Experience

Client: Kaiser Permanente,Oakland, CA.

May 2023- Present

Role: SQL/BI Developer

Responsibilities:

- Developed complex SQL stored procedures using **Microsoft SQL** Server 2008/2008 R2.
- Designed and implemented **SSIS ETL** packages based on a data warehouse architecture, creating fact tables, role-playing dimensions, and conformed dimensions.
- Wrote advanced SQL queries with inner/outer joins, sub-queries, CTEs, tally tables, and complex filters to retrieve data from multiple database links.
- Designed and generated reports using **SSRS** 2008/2008 R2.
- Created SSIS ETL packages to load data into the data warehouse, utilizing SSIS tasks such as Execute SQL Task, Bulk Insert Task, Data Flow Task, File System Task, and Execute Package Task.
- Developed SSIS packages to transfer data across different SQL Server instances.
- Managed data transfer tasks from remote servers to local folders using **FTP**.
- Deployed SSIS packages and reports to production environments.
- Generated reports by connecting **SSRS** to Analysis Services cubes.
- Developed **SSIS** packages for data migration from SQL Server 2000 to SQL Server 2005, including the creation of interface stored procedures for data loading and transformation.
- Created complex reports in SSRS by developing stored procedures for data-set management.
- Configured report snapshots and subscriptions for automated report distribution.
- Designed complex **SSIS ETL** packages using both control and data flow elements to meet business requirements.
- Developed and extended OLAP cubes, dimensions, and data source views in SQL Server Analysis Services (**SSAS**).

- Extracted data from various sources, including CSV files and MS SQL 2000, and loaded it into the staging database via **SSIS**.
- Designed and implemented SSIS packages to transform data using Data Flow Tasks from staging databases.
- Developed complex stored procedures in **T-SQL** to generate ad-hoc reports for SSRS.
- Prepared and delivered day-to-day and weekly/monthly reports in formats such as Excel, PDF, HTML, and XML.
- Created interactive Power BI dashboards and visualizations based on user requirements.
- Developed visualizations in **Power BI** using charts like bar charts, clustered column charts, waterfall charts, gauges, pie charts, and tree maps.
- Designed and developed SSIS packages for importing and exporting data between MS Excel, SQL Server 2012, and flat files.
- Wrote complex SQL queries, stored procedures, triggers, views, and user-defined functions to implement business logic.
- Developed SSIS packages to integrate data from flat files into SQL Server.
- Managed the migration of **SSIS** packages from SQL Server 2008 to SQL Server 2012 during data migration projects.
- Optimized SQL queries by analyzing execution plans for improved database performance.
- Used temporary tables to reduce rows in joins and aggregated data for various reports.
- Created detailed reports in **SSRS**, including drill-down, drill-through, and cross-tab reports.
- Designed SSIS packages for data extraction from BW/BI to SQL Server.
- Managed database backups and deployment processes for production environments.
- Documented technical processes for staging area operations for future reference.
- Scheduled and configured report snapshots and subscriptions in SSRS 2012.
- Managed the installation and configuration of SQL Server Reporting Services (SSRS) 2012.

Environment : SQL Server (2016/2014/2012/2008R2), Power BI, Azure Data Lake Store (ADLS), Azure Blob Storage, SSIS, Azure Synapse Analytics, Azure Databricks, Azure Data Factory (ADF), SQL Server Profiler, SQL Server Agent, SSRS , Power BI, SSAS, Tabular Model, VB.Net, C#, Azure Monitor, Azure Log Analytics, T-SQL, Database Performance Tuning, ETL, DAX.

Client: Optum (Remote)

Jun 2020 to Nov 2022

Role: Data Analyst

Responsibilities:

- Designed and developed SSIS packages to transfer data from various sources, including text files, XML files, Excel, and flat files into SQL Server 2012.
- Built and maintained SSIS packages to import/export data from diverse data sources using BIDS, based on the designed data models.
- Created interactive Power BI dashboards and reports, using SQL Server tables as the data source and incorporating lock objects for report security.
- Developed reports using Power BI Desktop, and published them to the Power BI Report Server for centralized access.
- Developed and deployed Tabular Model cubes using SSAS 2012, including creating calculated columns and measures with DAX.

- Utilized Microsoft Power BI Power Query to extract and format data from external sources, such as Excel, and built SSIS packages to load Excel data into the database.
- Wrote and optimized T-SQL queries and stored procedures to build SSIS packages and SSRS reports.
- Developed SQL queries to create dashboard-style reports tailored to business requirements.
- Designed, developed, and deployed reports in MS SQL Server using SSRS 2012, ensuring proper parameterization and stored procedure usage.
- Used SQL Server Profiler for auditing, analyzing events during specific time frames, and storing them for troubleshooting and performance optimization.
- Optimized database performance by refining indexes, SQL queries, and stored procedures to improve overall software performance.
- Developed VB.Net and C# scripts for error handling and data flow management in SSIS to improve integration workflows.
- Wrote complex SQL and T-SQL procedures, functions, and packages to validate data and test processes in Azure SQL Database and Synapse Analytics.
- Streamlined data integration processes by using Azure Data Factory's interface and automation features, reducing development time.
- Refactored complex workflows into Azure Databricks notebooks using PySpark and Pandas, developing data quality rules and transformation logic.
- Developed and optimized Azure Data Factory pipelines to orchestrate data movement and transformation tasks across Azure platforms.
- Tracked and resolved performance bottlenecks through SQL Server Profiler and implemented performance improvements.
- Developed detailed drill-down, drill-through, matrix, and parameterized reports in SSRS to provide actionable business insights.
- Created advanced SSRS reports with calculated fields, parameters, groups, sets, and hierarchies for deeper data analysis.
- Designed and implemented ETL strategies for insurance data extraction, transformation, and loading from various source systems using SSIS.
- Developed Power BI visualizations such as bar charts, trend lines, and forecasting models to provide actionable insights for future projections.
- Published multiple drill-mode Power BI reports using tables, financial tables, cross-tabs, and charts for comprehensive business analysis.
- Created advanced Power BI reports using SSAS Tabular models for in-depth data analysis and reporting.
- Published Power BI Desktop reports to the Power BI service, enabling seamless sharing and collaboration across the organization.
- Transformed and combined data using the Power Query Editor in Power BI for efficient data preparation.

Environment : T-SQL, SQL Server, Azure SQL Database, SQL Server Profiler, Azure Synapse Analytics, SSIS (SQL Server Integration Services), Azure Data Factory (ADF), Azure Databricks, Data Warehouse, Azure Data Factory, Azure Blob Storage & Data Lake Store, SSRS (SQL Server Reporting Services), Power BI, SSAS (SQL Server Analysis Services), VB.Net & C#, Python (PySpark/Pandas), ETL Development.
