SUMMARY

Java Developer with **3+ years of experience** delivering scalable applications using Java, Spring Boot, Microservices, and REST APIs. Proficient in SQL optimization, PostgreSQL, and Redis for improved database efficiency. Experienced with Kafka event-driven systems and AWS cloud deployments, reducing release cycles by 40% and enhancing system throughput by 28%. Adept at CI/CD automation, unit testing, and Agile collaboration, consistently improving performance, reliability, and maintainability while supporting enterprise applications handling millions of user transactions daily.

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript, Python (basic)

Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JUnit, Mockito

Web & APIs: RESTful APIs, SOAP, Microservices, JSON, XML, Swagger/OpenAPI

Front-End: HTML5, CSS3, JavaScript (ES6+), Angular, React

Databases: MySQL, PostgreSQL, Oracle, MongoDB, JDBC, Stored Procedures

Cloud: AWS (EC2, S3, RDS, Lambda), Azure (App Services, SQL Database), GCP (basic)

DevOps & Tools: Git, GitHub, GitLab, Jenkins, Docker, Kubernetes, CI/CD, Apache Tomcat, JBoss, IntelliJ, Eclipse

Testing: JUnit, TestNG, Postman, Selenium (basic)

Practices: Agile/Scrum, SDLC, OOP, Design Patterns, MVC, SOLID, TDD, BDD

Additional: Multithreading, Concurrency, Exception Handling, Performance Tuning, Kafka, RabbitMQ, Redis

PROFESSIONAL EXPERIENCE

UBER, KS, USA

Jan 2025 - Current

Java Developer

- Developed Spring Boot microservices for ride-matching, increasing backend throughput by 28% and ensuring platform scalability to reliably handle more than two million daily ride requests across multiple regions.
- Designed REST APIs integrated with PostgreSQL and Redis caching, decreasing average response times by 22% during high traffic peaks while improving transaction reliability across distributed systems supporting nationwide operations.
- Implemented Spring Security with JWT authentication, strengthening access controls and reducing unauthorized data access attempts by 35%, thereby improving compliance with internal enterprise security requirements and industry regulatory standards.
- Automated CI/CD pipelines using Jenkins and AWS services including EC2, Lambda, S3, and RDS, reducing release cycles by 40% while maintaining high deployment stability and reliability.
- Built Kafka-based event-driven processing workflows, enabling real-time ride event tracking and achieving 99.9% uptime during unpredictable demand surges, ensuring continuous service availability for millions of concurrent application users.
- Optimized PostgreSQL queries, stored procedures, and indexes, boosting transaction performance by 20% while minimizing latency during peak load, supporting critical ride allocation workflows for global customers.
- Increased code quality standards by implementing unit tests with JUnit and Mockito, achieving 95% test coverage, reducing production defects, and ensuring long-term system maintainability across evolving application requirements.

Hexaware Technologies, India

Mar 2021 - Aug 2022

Java Developer

- Migrated legacy monolithic applications into Spring Boot microservices, improving scalability, modularity, and maintainability while reducing system downtime during deployments by 30% for high-transaction enterprise banking platforms.
- Designed REST and SOAP services documented with Swagger/OpenAPI, enhancing integration speed by 25% for client systems and reducing third-party onboarding complexities across multiple financial product environments.
- Optimized Oracle and MySQL queries through JDBC and stored procedures, boosting query execution speed by 20% while supporting high-volume transaction processing across business-critical enterprise workflows.
- Developed Hibernate-based data access layers, reducing query execution errors by 15% and ensuring stable data persistence across financial applications handling sensitive customer information at scale.
- Containerized applications using Docker and deployed onto Kubernetes clusters, decreasing environment provisioning time by 45% and ensuring consistent deployments across testing, staging, and production environments.
- Collaborated with QA engineers using Selenium, TestNG, and Postman, reducing post-production defects by 18% and ensuring delivery of stable software aligned with business acceptance criteria.
- Contributed to Agile sprint planning and delivery, supporting feature releases that improved delivery timeliness by 25%, increasing stakeholder satisfaction and reducing bottlenecks within cross-functional development teams.

EDUCATION

Master of Science in Computer Science

May 2025

University of Central Missouri, USA

Bachelor of Technology in Computer Science and Engineering

Jul 2022

JNTUH University College of Engineering, Jagityal, India

CERTIFICATION

Programming in C - NPTEL | **Python** - Coursera (University of Michigan) | **Web Development** – Oakspro

Machine Learning - Verzeo | **Web Development** - Internshala | **IoT Workshop** - JNTU Jagitya

PROJECT

Online Food Ordering and Delivery System

- Built a scalable online food ordering and delivery platform using Java, Spring Boot, JSP/Servlets, and MySQL, enabling secure authentication, order management, and efficient backend services for users.
- Developed responsive interfaces with HTML, CSS, JavaScript, and Bootstrap, integrating backend APIs for menu browsing, cart management, payment processing, and real-time order tracking, improving user experience and overall system performance.
