

Indravathi Kalepalli Full Stack Developer

indravathi@jobhuntmails.com | (513) 430-5118 | USA | [LinkedIn](#) | [GitHub](#)

Summary

Experienced Full Stack Developer with over 4 years of expertise in designing, developing, and maintaining scalable web applications. Skilled in modern frontend frameworks, backend development with Java Spring Boot, and building secure, efficient RESTful APIs. Proficient in database design, cloud platforms, containerization, and DevOps practices. Adept at implementing security best practices, optimizing application performance, and collaborating in Agile environments. Passionate about delivering high-quality software solutions that enhance user experience, reliability, and system scalability.

Technical Skills

- **Frontend:** React.js, Redux, Angular, NgRx, WebSocket, HTML5, CSS3, JavaScript (ES6+), TypeScript, Responsive Design, RESTful Web Services, AJAX, Bootstrap, Material-UI, SASS/SCSS, Cross-Browser Compatibility
- **Backend:** Java Spring Boot, RESTful APIs, Spring Security, JWT, Spring Scheduler, Spring Actuator, Node.js (basic knowledge), Express.js (basic knowledge), Microservices Architecture, OAuth 2.0, Exception Handling, Caching with Redis
- **Databases:** PostgreSQL, Redis (caching), MySQL (familiarity), NoSQL (MongoDB basics), Database Schema Design, SQL, Query Optimization
- **Cloud & DevOps:** AWS (RDS, EC2, Auto-scaling, Load Balancing, S3 basics), Azure (App Services, Key Vault, API Gateway), Kubernetes, Docker, Azure DevOps, CI/CD Pipelines, Blue-Green Deployment, Infrastructure as Code (IaC) basics
- **Monitoring & Logging:** Grafana, Prometheus, Spring Actuator, ELK Stack (Elasticsearch, Logstash, Kibana basics)
- **Security:** Role-Based Access Control (RBAC), OAuth 2.0, Penetration Testing, Encryption, Code Audits, Secure API Access, OWASP Best Practices
- **Messaging & ML Integration:** Apache Kafka, XGBoost (Fraud Detection), Event-Driven Architecture
- **Testing & Quality:** JUnit, Mockito, Selenium (automation basics), Unit & Integration Testing, Code Quality (SonarQube), Test-Driven Development (TDD) basics
- **Development Tools & Methodologies:** Git, GitHub, Agile & Scrum, A/B Testing, Jira, Postman, Swagger (API documentation), Visual Studio Code, IntelliJ IDEA

Professional Experience

Full Stack Developer, Citi Bank

10/2024 – Present | Remote, USA

- Work on the Online Loan Application System; collaborate with cross-functional teams in Agile ceremonies and requirement gathering. Develop a web platform enabling customers to apply for loans, handle user authentication, eligibility checks, document uploads, and application tracking.
- Lead frontend development using React.js, implementing dynamic forms, real-time validations, and state management with Redux. Conduct A/B testing to improve UX, collaborating closely with UX/UI and QA teams to enhance user engagement by 25%.
- Design and optimize PostgreSQL database schemas for efficient data storage and retrieval. Implement encryption, role-based access control (RBAC), and leverage AWS RDS for high availability and automated backups, improving data security and system uptime by 99.9%.
- Develop RESTful APIs and business logic using Spring Boot, including loan eligibility engine and document management. Implement JWT-based security, Spring Security for authentication and authorization, exception handling, caching with Redis, and Spring Scheduler for automating background tasks, improving API response time by 40%.
- Integrate Apache Kafka with a pre-trained XGBoost ML model for real-time fraud detection, improving suspicious transaction flagging by 35%. Monitor application health and metrics using Spring Actuator, visualized with Grafana and Prometheus for proactive alerts and system insights.
- Write unit and integration tests using JUnit and Mockito, achieving 90% code coverage. Conduct penetration testing to identify and fix security vulnerabilities. Collaborate with DevOps engineers to deploy Docker containers on AWS EC2, configure auto-scaling and load balancing to improve fault tolerance and reduce downtime by 30%.

Full Stack Developer, Tata Consultancy Services

08/2021 – 07/2023 | Bangalore, India

- Developed Digital Loan Origination System for Retail Banking and collaborated in agile ceremonies and requirement workshops. Streamlined customer onboarding, credit scoring (CIBIL), document verification (OCR/AI), and eKYC using Aadhaar and PAN APIs for retail and SME customers.
- Built frontend with Angular and NgRx by implementing reusable components, dynamic forms, dashboards, and real-time tracking via WebSocket. Collaborated with QA for A/B testing and ensured responsive, accessible UI with role-based rendering for different user types.
- Engineered backend using Java Spring Boot with REST APIs, Spring Security with JWT, and Spring Actuator for observability. Implemented Redis caching, handled asynchronous workflows, and ensured scalability with API gateway and load balancing techniques.
- Integrated Grafana and Prometheus with Spring Actuator for real-time health monitoring, system metrics, and alerting. Designed backend to support horizontal scaling and deployed services with Kubernetes on Azure Cloud for resilient and high-availability infrastructure.
- Implemented role-based access control using Spring Security and OAuth 2.0 with encrypted JWT tokens for secure API access. Performed code audits, conducted penetration testing with the security team, and integrated third-party APIs using secure protocols.
- Created and maintained unit and integration tests using JUnit and Mockito achieving over 85 percent test coverage. Collaborated with QA for regression and performance testing. Automated CI/CD pipelines via Azure DevOps and enforced code quality using SonarQube.
- Worked with DevOps to deploy services in Docker containers using Kubernetes on Azure. Ensured zero-downtime blue-green deployments. Configured Azure App Services, Key Vault, and API gateway. Implemented load balancing and auto-scaling for peak demand handling.

Jr. Software Developer, Agile Solutions

09/2020 – 08/2021 | India

- Assisted in developing a Customer Support Portal for retail clients, contributing to frontend development using Angular to build reusable UI components and implement responsive design for better user experience.
- Supported backend development using Java Spring Boot by creating REST APIs, integrating basic security features, and collaborating with the team to troubleshoot bugs and improve application performance.
- Participated in code reviews, wrote unit tests using JUnit, and helped automate build and deployment processes using Azure DevOps pipelines, ensuring smooth CI/CD workflows and maintaining code quality standards.

Education

University of Cincinnati
Master of Engineering in Computer Science

08/2023 – 05/2025
Cincinnati, Ohio

Certifications

- AWS Certified Solutions Architect - Associate
- CodeChef Certified Data Structures and Algorithms Program
- ServiceNow System Administrator

Publications

Disease detection of plants using Deep Learning and Convolutional Neural Networks:

- Built a CNN-based plant disease detection model using TensorFlow, OpenCV, and Tkinter, trained on 10,000+ images with high classification accuracy; published in IRJET.
