

JAHNAVI BADDILA

+1(840) 200-5776 ♦ jahnavibaddila0526@gmail.com ♦ Sterling, VA

EDUCATION

Master's in Business Analytics, Governors State University, Chicago, Illinois

Dec 2022

Bachelor's In Computer Science And Engineering, JNT University, India

May 2019

EXPERIENCE

Computer Software Specialist

Jul 2024 - Present Day

Memphis Light, Gas and Water Division (MLGW)

Memphis, TN

- Developed and optimized ETL pipelines using Python, SQL, and AWS Glue, processing millions of records daily with integrated monitoring and logging.
- Followed software engineering best practices including code reviews, version control (Git), testing, and performance optimization in ETL workflows.
- Built and maintained Data Lakes and Redshift warehouses on S3, implementing partitioning and compression that reduced query runtime by 40%.
- Designed and implemented data models and transformed datasets (CSV, Excel, Parquet) with Pandas and NumPy, enabling accurate analytics for reporting teams.
- Automated data conversion pipelines from CSV to Parquet for meter and utility data, cutting storage usage by 50% and improving processing speed.
- Wrote and optimized complex SQL and PL/SQL queries, stored procedures, and functions to integrate data from multiple sources (SQL Server, Azure SQL DW, Snowflake).
- Leveraged AWS services (Glue, Redshift, S3, Lambda) and applied best practice code reviews, version control, testing—to ensure robust, scalable ETL workflows.
- Developed Java-based automation processes to validate, transform, and process large volumes of utility and meter data as part of ETL workflows.
- Built and scheduled Java batch jobs integrated with AWS services and relational databases to automate recurring data processing tasks.
- Created Power BI dashboards from processed data, delivering actionable business insights and improving decision making for stakeholders.

Data Analyst

Jan 2023 - Jul 2024

Industry Experts, Inc.

San Dimas, CA

- Supported ETL development in Informatica PowerCenter, assisting with data migration, transformation, and workflow design.
- Wrote and optimized SQL queries, views, joins, and stored procedures to enable accurate reporting and analytics.
- Assisted in extracting and transforming data from SQL Server to Oracle using Informatica, ensuring data consistency and integrity.
- Developed Python scripts to clean, standardize, and pre-process data, improving quality across reports.
- Created basic visualizations using Matplotlib to summarize trends and support data-driven decision-making.

- Utilized Pandas for data manipulation, handling missing values, reshaping datasets, and preparing data for ETL processes.
- Assisted in managing data on Amazon S3, including file uploads, permissions, and organization for ETL pipelines.
- Created Java automation programs to extract, clean, and validate data from SQL Server and Oracle databases for reporting and analytics.
- Used Java batch processing and JDBC to automate data loading and reduce manual effort in ETL-related tasks.
- Participated in Amazon RDS tasks, including database setup, configuration, and monitoring backups to ensure availability and reliability.

Software Engineer
Capgemini Pvt. Ltd

Jul 2019 - May 2021
Bangalore, India

- Managed IT service processes in ServiceNow, including incident tracking, change management, approvals, and CAB (Change Advisory Board) participation to ensure minimal disruption.
- Collaborated with stakeholders to define change strategies, configure workflows, and implement approval mechanisms, improving process efficiency and organizational adaptability.
- Trained teams on ServiceNow change management workflows, streamlining adoption and reducing process errors.
- Performed data analysis with Python, cleaning, transforming, and analyzing large datasets to generate actionable insights for decision-making.
- Developed and optimized complex SQL queries, joins, views, and test tables to extract and manipulate data from multiple databases.
- Utilized Informatica to ETL data from SQL Server to Oracle, ensuring reliable and efficient data flow between systems.
- Built and maintained Tableau dashboards and visualizations (Dual Axes, Histograms, Maps, Bubble Charts, Stacked Bars, Tree Maps, Box & Whisker, etc.) to support reporting and business analytics.

PROJECTS

Utility Meter Data ETL & Analytics Pipeline

Developed Using Python, SQL, AWS Glue, Redshift, S3, Power BI, Tableau

- Developed automated ETL pipelines using Python, SQL, and AWS Glue/Redshift to process, transform, and validate large-scale meter and operational data.
- Built dashboards in Power BI/Tableau to monitor usage patterns, detect anomalies, and support billing and operational decisions.
- Collaborated with business and operations teams to understand meter data requirements, define transformation logic, and implement validation rules within ETL pipelines.
- Monitored daily ETL job executions, troubleshooted Glue job failures, and resolved data issues to ensure timely and accurate data availability for reporting and billing.
- Implemented Java-based automation processes to handle batch validation, transformation, and preprocessing of large-scale meter data, reducing manual intervention and improving data processing reliability.

Meter Data Reconciliation

Developed Using Python, SQL, Data Quality, ETL Automation

- Developed Python scripts and SQL pipelines to reconcile meter readings with billing systems, implementing automated error detection for missing or inconsistent data.

- Reduced manual effort by 70% and improved billing accuracy.
- Designed reconciliation logic to compare source meter readings with billing records, identifying variances at daily and monthly levels.
- Implemented automated data quality checks using Python and SQL to flag duplicates, null values, and mismatched consumption values.

Outage & Maintenance Analytics

Developed Using SQL, Power BI, Data Analysis, Reporting

- Automated Reporting and Visualizations in Power BI, analyzing the utility outage and maintenance data improving operational decision making and response times.
- Created SQL pipelines to extract and aggregate outage and maintenance data from multiple sources for timely analysis.
- Performed root-cause analysis using SQL, Python identifying recurring outages and providing insights to reduce downtime and optimize maintenance schedules.

Customer Data ETL Pipeline

Developed Using Python, Pandas, SQL Server, Oracle, Informatica

- Extracted customer records from SQL Server, transformed and standardized them using Python and Pandas, and loaded into Oracle for reporting dashboards.
- Implemented data validation and cleansing routines in Python to ensure accuracy, consistency, and completeness of customer records before loading.
- Automated ETL workflows using Informatica, scheduling and monitoring jobs for timely data availability in Oracle.

SKILLS

Programming	: Python (Pandas, NumPy, Matplotlib), SQL, Java
ETL & Data Tools	: Informatica, SAS, JIRA
Cloud & Big Data	: AWS (S3, Redshift, Glue, EMR, IAM), Hadoop, Spark
Databases	: Oracle, SQL Server, Snowflake
BI & Visualization	: Power BI, Tableau, SAP, SSRS, Excel
IDE/Other Tools	: Jupyter, PyCharm, VS Code, ServiceNow

CERTIFICATIONS

- AWS Certified Solutions Architect-Associate
