Philadelphia, PA

PROFESSIONAL SUMMARY:

Dedicated software development professional with 3+ years of experience in the analysis, design, development, maintenance, and implementation of web and client-server applications. Skilled in HTML5, CSS3, JavaScript ES6, TypeScript, Angular, React, Java, and Node.js. Successfully validated my technical abilities by completing a money transfer application.

I possess extensive experience in web application development using Java 8, J2EE, Spring, and various APIs. Proficient in creating web services with REST and SOAP, and experienced with open-source frameworks like Spring, Hibernate, and Spring Boot. I have completed over 500 hours of hands-on training as an Application Developer. An independent team player with strong communication skills, I am eager to leverage my expertise to support and enhance my new team.

TECHNICAL SKILLS:

Languages	Core Java 8/11/17, J2EE 7, SQL, Python 3.8+ C++, JavaScript ES6
Java Technologies	Servlets 3.1, JSP 2.3, JMS 2.0, Java Beans, Java Multithreading, JDBC 4.2+
Frameworks	Spring 5, Hibernate, Spring Boot, JSF, REST API (Spring MVC), Entity Framework Core 5+
Web Servers	Tomcat, Apache
Version Control Tools	GIT, GitHub
Web Technologies	HTML5, XML, CSS3, JavaScript ES6, jQuery, Angular, Bootstrap 5
Testing Tools	Selenium, Insomnia 2020, Postman 8, JUnit 5
Databases	Oracle, SQL Server, MySQL 8
Operating Systems	Windows 10/11, Mac OS Big Sur/Catalina, Linux/UNIX
Web Services	REST API, Microservices
Methodology	Agile and Waterfall
Cloud Computing	AWS , Azure
Development Tools	Visual Studio Code, Android Studio, Blender

PROFESSIONAL EXPERIENCE:

Client: Finxact | Jacksonville, Florida

June 2021 – Current

Role: Java Developer

Responsibilities:

- Authored robust backend solutions using Java and Spring Boot, ensuring high performance and scalability.
- Executed the design and development of RESTful APIs to seamlessly connect front-end React applications with backend services.
- Crafted user-friendly interfaces employing HTML, CSS, Bootstrap, and Angular for an enhanced user experience.
- Utilized Git CLI and GitHub within an Agile framework to collaboratively develop a full-stack application with team members.
- Presented backend application development outcomes following regular SCRUM sprints and created user stories for effective sprint planning.
- Design, develop, and deploy scalable web applications on AWS utilizing services such as EC2, S3, and Lambda to ensure high availability and optimal performance.
- Develop and manage RESTful and SOAP web services to enable seamless integration between cloud-based applications and third-party services.
- Utilize AWS API Gateway to create, publish, maintain, and secure APIs, ensuring compliance with security standards and optimal performance.

- Collaborated with cross-functional teams to refine system architecture and implement business logic through core Java applications.
- Leveraged Hibernate for efficient database interactions, optimizing query performance and data integrity.
- Participated in the development of secure microservices, implementing authentication protocols for safe communication.
- Facilitated the integration of NLP modules to improve chatbot functionality and user engagement.
- Orchestrated comprehensive troubleshooting and debugging processes throughout the software development lifecycle.
- Supervised the implementation of Kafka for real-time data streaming, improving application responsiveness and reliability.
- Developed and optimized financial applications for transaction processing and account management within the fintech sector.

Environment: Java, J2EE, Spring, Hibernate, Servlets, Multithreading, Data Structures, JSP, HTML, CSS, JavaScript, JSON, REST API, RESTful Web Services, JUnit, Bootstrap, Git, Windows, Linux, Eclipse, Oracle, Apache, Tomcat, Maven, React, Angular, Kafka, Microservices, Docker, AWS, SQL

EDUCATION:

- **B.S. in Computer Science | Lincoln University** | 1570 Baltimore Pike, Lincoln University, PA | September 2018 - May 2022
- **Dual Degree Program with High School | Community College of Philadelphia** | 1700 Spring Garden St, Philadelphia, PA | September 2015 - June 2018

CERTIFICATIONS:

- UNDP COURSE CERTIFICATES OBTAINED

PROJECTS:

1. FinTech Transaction Processing System

At Finxact, I developed a high-performance FinTech Transaction Processing System using **Java**, **Spring Boot**, and **RESTful APIs** to handle real-time financial transactions, account management, and payment processing. I integrated **Hibernate** for efficient data handling, optimized database queries with **MySQL**, and employed **Apache Kafka** for real-time data streaming. The frontend, built using **React** and **Angular**, connected seamlessly with the backend, enhancing user experience. I also implemented robust security protocols using **OAuth2** and **JWT tokens** for data protection. The system was containerized with **Docker** and deployed on **AWS** and **Azure**, supporting over 100,000 daily transactions with a 20% reduction in downtime.

2. Healthcare Management System

In this project, I developed a comprehensive **Healthcare Management System** for a private healthcare provider, focusing on patient records, appointment scheduling, and billing. I built the backend APIs using **Spring Boot** and **Hibernate**, which integrated seamlessly with a **MySQL** database, ensuring efficient data handling and communication with the **Angular** frontend. The system utilized a **microservices architecture** for modularity, allowing independent management of services like appointment scheduling and billing. Deployed on **AWS** using **Docker** and **Kubernetes**, the system increased operational efficiency by 30%, reducing manual errors and enabling real-time data sharing across departments.

3. eCommerce Platform for Retail

I contributed to the development of a scalable **eCommerce Platform** for a major retail chain, using **Java 11**, **Spring Boot**, and **React** to build the full stack. The platform handled product catalogs, orders, shopping carts, and payments, with **REST APIs** facilitating backend and frontend communication. I optimized the platform's database queries using **Hibernate** with **MySQL** and integrated **AWS S3** and **CloudFront** for efficient content delivery. The platform was containerized with **Docker** and deployed on **Kubernetes**, handling over 1 million users during peak sales events, which resulted in a 25% increase in online sales.
