

Vishnu Varshini Motupalli

Dallas, Texas - (469)-269-0452 | vishnuvarshini.motupalli@gmail.com

PROFESSIONAL SUMMARY:

- Certified Java Developer with nearly **5 years** of experience in web development, user interface design, development, and implementation of web and mobile applications using the latest web technologies. Experienced in Java **Full Stack/ J2EE/Core Java/ Core Spring/Cloud** software development.
- Worked in various software development life cycles such as **Agile, Scrum, Waterfall Model, Iteration Test-driven development (TDD)** and **Behavioral Driven Development (BDD)** to developed applications.
- Used front-end technologies such as **JavaScript, TypeScript, ReactJS, Vue JS, AngularJS, Backbone.js** as JavaScript libraries for open-source view models. Used **ES6, Bootstrap, CSS, and HTML** to build web services.
- Practical experience in **Angular CLI** and handling reactive forms or web forms and their validation in Angular to create desktop application using **Angular**. Experienced in **ReactJS** and worked with **Redux** architecture, **ECMAScript 6** feature. Experience in Cross-Platform Mobile Development using **React Native + Type Script** based mobile app.
- Worked on proof of concepts (POC) with **NodeJS, REST** Framework and helped team in choosing right framework.
- Involved in creating a reusable component using **ReactJS** for **DOM** manipulation. Developed various screens for front end using **ReactJS**, used various predefined components from **NPM** and **Redux** libraries.
- Experienced in developing SPA in **React JS** framework and worked with **React Flux** Architecture, Implemented **Redux** architecture using complex **OOPS concepts** to improve the performance of the website.
- Strong knowledge in developing **Dynamic Single Page Application (SPA)** using **ReactJS, NodeJS** and **MongoDB**.
- Good experience with **Java 8** features, such as **Lambda expression, defaults and static methods in interface, Streams API, Optional Class, and parallel sort in Arrays** and experience with **Collections, Lists, Sets and Maps**.
- knowledge on **Exception handling and OOPS concepts** such as **multithreading, encapsulation, inheritance, and polymorphism** and worked with **Eclipse and IntelliJ** for the java coding platform.
- Used **Log4j** and **Slf4j** utility to compute **run-time logs** for project management and version management. Used **Swagger** to document the API's and validated the **RESTAPI's** using **Postman**.
- Used **Spring Tool Suite (STS)** which is based on Eclipse to develop and debug application code. Worked on multiple components of spring framework like **Spring Boot, Spring MVC, Spring DAO, Spring AOP** and **Hibernate** frameworks.
- Good experience in developing application with **SOAP & REST** Web Services.
- Used Spring Core annotations for **Spring DI and Spring MVC** dependency injection for **REST APIs** and **Spring Boot**. Extensive Experience in **JDBC, Servlets, JSP, Java Beans, JMS, Struts, Spring, Hibernate**. Implemented **Spring and Spring DAO (Data Access Object) services** for controller interaction and developed an asynchronous message listener using **Spring JMS** templates and worked on **MapReduce** program migration.
- Microservices used for architectural and organized approach for development in Cloud Services. Experience in developing applications as **Microservices** using **Spring Boot** on a Service Oriented Architecture with **ESB**.
- Experience in development and implementation of **ORM framework Hibernate/ Hibernate** with **Spring Data Access**. Used **Java Messaging Services (JMS)** for reliable& asynchronous exchange of important information.

- Experience working with messaging systems using message brokers like **RabbitMQ** and worked with **Spring Kafka**.
- Experience in managing **MongoDB** environment from availability, performance, and scalability perspectives.
- Implemented to reprocess the failure message in **Kafka** using offset id and implemented **Kafka** producer and consumer applications on **Kafka** cluster setup with help of **Zookeeper**. Worked on Implementing the **Apache Kafka** cluster as messaging system between the **APIs** and **Microservices**.
- Experience in coding using **SQL, PL/SQL** involving procedures/ Functions, Triggers. Used **Hibernate** to extract and HQL to query from **MYSQL** database. Experienced in database modelling, design and development of **PL/SQL** stored procedures, packages in relational databases: **Oracle, SQL Server, PostgreSQL, and MySQL**.
- Experience in **Amazon Web Services (AWS)**, such as **EC2, AWS RDS, Dynamo DB S3, Lambda function, cloud formation, Elastic Beanstalk, VPC and security groups, simple email services, SNS and SQS**.
- In-depth understanding of **AWS Dynamo DB, AWS SNS and AWS Lambda functions** in area of distributed technologies like **C++, Java, J2EE** (JDBC, Servlets, JSP, AJAX, EJB, Struts, Hibernate, Spring, Web Services).
- Expert in **Cloud infrastructure**, by using various tools like **GitHub, SVN, Bitbucket, Terraform, Gradle, Maven, Jira, Jenkins, Chef, Ansible, Docker, Kubernetes** which mainly used as containers in cloud.
- Used **Kubernetes** to orchestrate **Docker containers** and configure the pods to run applications and to manage micro services for development of **(CI/CD) Continuous Integration and Continuous Delivery**.
- Good with the application server, web server and various development tools like **Apache, Tomcat Server, WebLogic server, WebSphere server, JBoss and Nginx**. Repositories used **GitHub, Bitbuckets, SVN and CVS**.

WORK EXPERIENCE:

Arcane Systems LLC (Experian PLC)

Feb 2022 – Nov 2023

Client: Experian PLC

Role: Full Stack Java Developer

Responsibilities:

- Worked in all phases of **Software Development Life Cycle** using **Agile Development Methodology**. Worked with cross-functional engineering teams to resolve integration issues.
- Wrote technical design documents, performed code reviews, and maintained state of the art engineering practices and used version control system **GIT** and **slack** to communicate during daily work and while release days.
- Used **Bootstrap** to create standards-compliant, cross-browser compliant **CSS**-based page layout.
- Worked on creating Component for various Button, Checkbox, Input, Icons, Toggle Button, Multi-select Dropdown.
- Involved in creating a reusable component using **ReactJS** for **DOM** manipulation. Developed various screens for front end using **ReactJS**, used various predefined components from **NPM** and **Redux** libraries.
- Used **Spring Boot**, which is quicker in creating cloud microservices and used **RESTful** Web Services were extensively used to enter, delete, and update details, and their data would be used by the other two applications.

- Used model of **Microservices**, with **Spring Boot** based services connecting with a combination of **REST** and **Spring Boot** moreover also integrated **Microservices** design of spring boot focused on **RESTful** resources.
- Called Restful web services calls for **POST, PUT, DELETE & GET** Methods & tested Web API http calls using **Postman**.
- Experience in installing, configuring, managing, upgrading and migrating, monitoring and troubleshooting **MySQL, SQL** Server and **Oracle** databases. Integrated **REST** endpoints and 3rd party **APIs** in front-end.
- Checked results for any new bug fixes/ failures and getting them fixed by coordinating with other team members. Experience in creating **Splunk** dashboard and alerts creation.
- Developed various test plans, test conditions and test cases to be used in testing, based on business requirements given by our Product Owners, technical specifications and/or product knowledge.
- Used **Java 8** features like **Lambda** expressions along with **Streams** for creating internal iteration and performing chain operations such as **Map**, collect on a **collection** Objects, **Filters**.
- Implemented authentication and authorization for the application using **Spring Security** and **OktaAUTH**.
- Used **Spring Boot Actuator** to externalize application's configuration properties for various environments. Used **Spring Boot, Spring Security, Spring DAO** to build **Microservices** and deployed to **AWS**.
- Designed and implemented employee search function based on their skills with **Java 11, Spring** and **Hibernate**. Fetched the data from database based on the search query using these technologies.
- Implemented **MySQL** and **AWS** connection with Hibernate and **Spring Data JPA**.
- Experience with an in - depth level of understanding in the strategy and practical implementation of **AWS** cloud-specific technologies like **Elastic Compute Cloud (EC2), Simple Storage Services (S3), Route 53, CloudFormation, Elastic IPs, RDS, Red Shift and Cluster**. Deploy web application using **AWS Elastic BS Service**.
- Set up Cron jobs to automate log files management including archiving, compressing, and backing up on remote server tasks. Configuration of **AWS S3 bucket** creation, **AWS IAM Security policy**, user creation.
- Responsible for writing and maintaining **Terraform modules** and scripts to provision company infrastructure.
- Used **Kubernetes** to **Orchestrate** the **Docker Containers** and configure the containers to run the application.

Environment: HTML5, CSS3, Bootstrap, React, Redux, JavaScript, Java, REST API, Spring Boot, Spring Security, OktaAUTH, Spring Cloud concepts, Spring Data JPA, Jenkins, Mongo DB, GitHub, AWS Devops, JUnit, Mockito, Docker, Kubernetes.

Client: USAA

Oct 2019 – Nov 2021

TCS – Hyderabad, India

Role: Java Backend Developer

Responsibilities:

- Collaborating with product owners, business analysts and other team members in a cross-functional agile environment to produce content management system that is fully integrated with various user account systems.

- Worked in all phases of **Software Development Life Cycle** using **Agile Development Methodology**. Worked with cross-functional engineering teams to resolve integration issues.
- Wrote technical design documents, performed code reviews, and maintained state of the art engineering practices and used version control system **GIT** and **slack** to communicate during daily work and while release days.
- Worked on the analysis, design, and development of Java-based applications using **J2EE** design patterns. Used simple client-side technologies like **JavaScript**, **AJAX**, **JSON**, **HTML5**, and **CSS3** to consume **RESTful** web services.
- Used model of **Microservices**, with **Spring Boot** based services connecting with a combination of **REST** and **Spring Boot** moreover also integrated **Microservices** design of spring boot focused on **RESTful** resources.
- Generating **TypeScript** interchangeable modules and resources to consume **REST APIs** through **Angular8**. Module oriented design and focused on designing **REST** web server as part of transmission process of existing system to be separate entities and reached by **RESTFUL** calls. Designed and developed **microservices** with **Spring Boot** and **REST**.
- Developed & maintained standalone application using tools such as **Spring Boot Microservices** based on **Service Oriented Architecture(SOA)** with **ESB** (Enterprise Service Bus). Used **Spring Boot** at back-end to develop application.
- Spring Framework used in current project & the features used for **Spring** Framework are **Spring Boot**, **Spring MVC**, **Spring Core**, **Spring AOP**, **Spring Security**, **Spring Cloud**. Installed **microservices** using **Spring MVC**, **Spring Boot**.
- Used **Spring Boot**, which is quicker in creating cloud microservices and designed spring-based software with far less setup. Developed **Spring Cloud** Stack with **Microservices** and design Web Services in **Java** and **Java** Framework utilizing the **Spring Boot & Spring Cloud Stack**.
- Involved in writing **GRADLE** script for creating destination folders, compiling, creating jar, war, and ear files, and copying the files to deployment folder.
- **RESTful** Web Services were extensively used to enter, delete, and update details, and their data would be used by the other two applications.
- Implemented **Kafka producer** and **consumer** applications on **Kafka** cluster setup with help of **Zookeeper**. Designed, Implemented and Supported Confluent **Kafka** for this project. Used **Apache Kafka** confluent distribution both as a traditional messaging queue platform and streaming platform for triggering Alerts.
- Used **Swagger** pages for endpoint documentation, used Lombok plugging, Apache for logging, **RabbitMQ** setup for configuration files by performing event bus, operated on **NoSQL** database, **Cassandra DB**.
- Hands on experience with an in - depth level of understanding in the strategy and practical implementation of **AWS** cloud-specific technologies like **Elastic Compute Cloud (EC2)**, **Simple Storage Services (S3)**, **Route 53**, **CloudFormation**, **Elastic IPs**, **RDS**, **Red Shift** and **Cluster**. Deploy web application using **AWS Elastic BS Service**.
- Experienced in working with version control systems like **GIT** and used Source code management client tools like **GitBash**, **GitHub**, **Git Lab**.

Environment: HTML5, CSS3, Bootstrap, jQuery, JavaScript, TypeScript, ECMA, Java 8, Microservices, REST API, RESTful, SOAP, Spring Boot, Spring Security, Spring Cloud concepts, Spring Data JPA, RDBMS, Gradle, Jenkins, JBOSS, Gitlab, Swagger, RabbitMQ, Cassandra DB, SVN, Log4J, Apache Kafka, Jasmine, Karma, Junit, Mockito, Apache Camel, Docker, Hibernate.

Client: RS Components

Mar 2018 – Sep 2019

TCS – Bangalore, India.

Role: Java Backend developer

Responsibilities:

- Worked in all phases of Software Development Life Cycle using Agile Development Methodology. Worked with cross-functional engineering teams to resolve integration issues.
- Involved in every phase of SDLC in design, development and testing of the application developed **JSP** pages and client-side validation by **Java script tags** through **Agile** methodology.
- Used **Java, HTML, TypeScript, CSS, Bootstrap, JavaScript**, and **jQuery** to design and developing UI.
- Application was built using **Micro Services** architecture where most of the functionality was exposed using web services. Overall architecture was polyglot in nature consisting of various languages (**Java**).
- Developed **Java** modules implementing business rules and workflows using **Spring MVC, IoC and Web Framework**. Had experience in performance tuning **J2EE** apps, performance testing, analysis, and tuning. Used **Spring** framework to implement middle tire with **Spring IOC, AOP**.
- Experience in Multithreading, CI/CD, Cloud computing, Web - **J2EE** technologies designed UI screens using **JSP, JSTL**. Used **Java 6** for client-side validation.
- Developing the application using **Spring MVC** and **Hibernate** based frameworks done with server-side validations using **Spring MVC** Validation framework **REST APIs**, including **JSON** data formats wrote shell scripts in Linux to call routines.
- Experience working with **GRADLE** as Build tool, STS/Eclipse as IDE, agile tool **JIRA, Confluence** for documenting, **Splunk** for log monitoring, and GitLab as repositories.
- Deployed the application on Web Sphere Application Server used **Junit** framework for unit testing of application and **SLF4J** to capture the log that includes runtime exceptions played an important role writing the **Junit** test case scenarios for all the validations.
- Used traditional relational Databases such as **Oracle & MS SQL** server for manipulating substantial amounts of data. Worked on **TOAD for Oracle** Tool which helps to access the Database and wrote many **SQL** queries.
- Experience using **SOAPUI** to test the existing services. Responsible for consuming Web Service from **WSDL** coming up with the test cases for unit testing before the QA release played a very important role in resolving the defects.
- Used to check the Server Health in **App Dynamics** and **Grafana** in daily bases. Worked on managing (Stop, Start, restarting) the web servers that are **Apache Tomcat Servers**. Worked on running the Jobs using Unix. Familiar with **PUTTY**.
- Involved in Java Production Support. Worked on **ServiceNow** Tickets which involves in resolving the website Issues. Worked on many production Issues.

Environment: Java 6, J2EE, Spring, Spring MVC, Hibernate, SOAP, REST API, JavaScript, Junit, jQuery, Oracle, PL/SQL, JDBC, Eclipse, Web Logic, CVS, Junit, Bootstrap, Agile, Dashboard, UML, JSP, JSTL, Servlets, Maven, CSS, JSON, Tomcat, TOAD.

TECHNICAL SKILLS:

Languages	C, C++, Python, Java, Advance Java, XML, HTML, PL/SQL.
Web Technologies	Java Servlets, JSP, HTML5, AJAX, XHTML, DHTML, CSS, Angular JS, Node JS, React JS, Redux, JSON, Bootstrap, JMS
Web service Frameworks	Spring, Hibernate, Spring MVC, Spring Boot, Spring DAO, Spring AOP, slf4j, Log4j
Application/Webservers	Web Logic Server, Apache HTTP Server, Apache Tomcat, JBoss
IDE Tools	Eclipse, IntelliJ, Spring Tool Suite
Web Services	SOAP, RESTful, JMS, JAX-RS, JAX-WS
Databases	Oracle No SQL, MySQL, PostgreSQL, MongoDB, Cassandra
Build Scripts & DevOps	Maven, Gradle, Jenkins, Docker, Kubernetes
Tools	Selenium, Postman, Log4j, Junit, Ant, Rational Rose, UML, CVS, Karma
Cloud	AWS, Azure
Version Control Tools	GIT, Rational Rose
Testing Tools/Others	Junit, Selenium, Jasmine, SoapUI
Messaging Tools	JMS, Apache Kafka
Operating System	Windows, Linux, Unix
Design patterns	Singleton, Data Transfer Object, Facade, Data Access Object, MVC
Software Methodologies	Agile, TDD, Scrum, SDLC

EDUCATION DETAILS:

Bachelor's of Computer Science (2013 – 2017)
Andhra University, India.
