LinkedIn: <https://www.linkedin.com/in/kavita-m-9314b81a2/>

PROFESSIONAL SUMMARY:

- **8+ years of experience** in developing web-based, client/server, and business applications using **Java technologies**.
- Expertise in **SDLC methodologies** including **Waterfall, Rational Unified Process (RUP), Agile, and Test-Driven Development (TDD)**.
- Strong experience in developing **front-end applications** using **HTML5, CSS3, JavaScript, jQuery**, and frameworks like **Bootstrap, Angular, AngularJS, and ReactJS**.
- Proficient in **single-page application (SPA)** development using **ReactJS** and **Node.js**, with experience in **server-side validations**.
- Skilled in back-end development with **Java (v8 & v11), Spring Boot, JPA, Hibernate**, and secondary modules like **Spring Security, Spring Batch, and Spring IOC**.
- Hands-on experience with **RESTful web services**, leveraging both **Java** and **Node.js** for producing and consuming APIs.
- Proficient in working with databases like **Oracle, MySQL, and MongoDB**, with hands-on experience in **JDBC and Hibernate** for persistence.
- Extensive experience in **BPM (Business Process Management)**, specializing in **JBPM** and **IBM BPM** for workflow automation and business process orchestration.
- Strong understanding of **Core Java** concepts such as **Multithreading, Exception Handling, and Inheritance**.
- Hands-on experience with **automation testing** using **Selenium, Mockito, and JUnit**, and skilled in **CI/CD pipelines** using **Jenkins** and **Bitbucket**.
- Experience in **PaaS** services like **Pivotal Cloud Foundry (PCF)** for cloud deployment, and extensive knowledge of **AWS Cloud** for deploying microservices.
- Proficient in deployment automation for application servers like **IBM WebSphere, JBoss, and Apache Tomcat**.
- Skilled in build tools such as **Maven** for automating, testing, publishing, and deploying dependencies from repositories.
- Strong experience in source control management with tools like **Git, GitHub, and Bitbucket**, as well as issue tracking tools like **JIRA, Bugzilla, and HPQC**.
- Experienced in building secure applications using **Spring Batch, Spring Boot, Spring Security** and **Microservices** architecture with **OAuth2** and **JWT** for authentication.

CERTIFICATIONS:

- Six Sigma Yellow Belt Professional
- AWS Certified Solutions Architect - Associate

TECHNICAL SKILLS:

Category	Skills
Languages	Java, Python, Camunda
Frameworks	Spring, Spring Boot, Hibernate, JPA, Struts, Angular, ReactJS, Node.js, Express.js
Web Technologies	HTML5, CSS3, JavaScript, TypeScript, jQuery, Bootstrap, AJAX, JSON, RESTful Web Services
Database Technologies	Oracle, MySQL, MongoDB, DB2, JDBC, PL/SQL
Cloud Platforms	AWS, Azure, PCF
BPM Tools	jBPM, IBM BPM
DevOps/CI-CD Tools	Jenkins, Bitbucket, Git, GitHub, Maven, Docker, Nexus, Azure DevOps
Servers	Apache Tomcat, JBoss, IBM WebSphere
IDEs	IntelliJ IDEA, Spring Tool Suite (STS), Eclipse, Visual Studio
Version Control Systems	Git, SVN, Bitbucket
Project Management & Tools	JIRA, Confluence, Bugzilla, HPQC, ALM
Logging & Monitoring	Log4j, Splunk, AWS CloudWatch

WORK EXPERIENCE:

Client: HSBC Bank (Remote)

Role: Technical Lead

August 2020 – Till Date.

Responsibilities:

- Led projects using **Agile methodologies** (Scrum, Kanban) and facilitated **Scrum ceremonies** (stand-ups, sprint planning, retrospectives).
- Worked with **Product Owners** to prioritize and refine user stories, ensuring alignment with business objectives.
- Collected and analyzed data (e.g., bug counts, code quality, team velocity) to drive continuous improvement and informed **decision-making** within **Agile sprints**.
- Led and managed both development and testing teams, ensuring collaboration and adherence to sprint goals, while applying **root cause analysis** (RCA) to minimize defects and improve product quality.

- Developed and implemented responsive **single-page applications (SPA)** using **ReactJS**, ensuring **cross-browser compatibility** and utilizing **Redux** for state management and **Bootstrap** for consistent styling.
- Used **ReactJS (v16.14.0)** in components like JSX, creating React components **NPM** (Node Package Manager), Virtual DOM, React Props, Lifecycle methods, working with **React States** and Events.
- Worked with **Java 8** and **Java 11**, leveraging the latest features of each version to enhance application performance and scalability. Specifically utilized Java 11 features like the **var keyword**, **HTTP client improvements**, and **stream enhancements** for better code optimization.
- Architected **RESTful microservices** using **Spring Boot**, integrated with front-end React applications, enabling scalable, distributed systems.
- Developed and Implemented **Business Process Management (BPM)** workflows using **jBPM** to automate and streamline business processes within the application, enabling efficient process execution and decision management.
- Familiar with **IBM BPM**, working with BPMN models, process orchestration, and integration for enterprise solutions.
- Utilized **jBPM** to model, execute, and monitor business processes, enhancing decision-making workflows and ensuring compliance with business rules.
- Developed workflow-driven applications integrating **jBPM** with **Spring Boot** microservices architecture for handling dynamic, rule-based business logic.
- Created and scheduled Batch process using Java Batch and **Spring Batch** and implemented job throttling for **Spring** batch process.
- Applied Core Java concepts such as **Collections**, **multi-threading**, and **exception handling**, integrating **MySQL/Oracle** for persistent storage.
- Integrated **OAuth2** and **JWT** for secure token-based authentication in the microservices architecture, improving security and scalability.
- Managed dependency management and build processes with **Maven**, utilizing IDEs like **Eclipse**, **IntelliJ**, and **Visual Studio** for efficient development workflows.
- **Implemented Spring Security** to provide authentication and authorization functionalities, ensuring secure access to application endpoints.
- Utilized **Spring's dependency injection** (via **@Autowired** and **@Qualifier**) to manage and inject services, ensuring loose coupling between application components.
- Used **Swagger/OpenAPI** to generate API documentation automatically for the RESTful services, enhancing collaboration.
- Developed and managed CI/CD pipelines using **Jenkins**, ensuring high-quality delivery for Java applications.
- Deployed applications on **AWS** services like **API Gateway**, **EC2**, and **CloudWatch**, optimizing cloud infrastructure for performance and reliability.
- Collaborated with **stakeholders**, **developers**, and **testers** to ensure cohesive and scalable solutions, ensuring adherence to best practices in software architecture.
- Led both **manual and automation testing** efforts, utilizing **Tosca** for test automation, significantly reducing regression testing time.

- Managed test planning, execution, and reporting to ensure that the software delivered met functional and performance expectations.
- Utilized **Log4J** for logging and monitoring production issues via **AWS CloudWatch** and **Jenkins**, ensuring smooth incident resolution.

Environments: Java8, Java11, Spring boot, jBPM, Swagger, NPM, Rest API, Maven, NodeJS(v20), ReactJS, JavaScript, Bootstrap, Redux, AWS, Jenkins, MySQL, Oracle, Postman, Insomnia, Tosca, ALM, Jira, Confluence, Git, Nexus, Log4J, STS, Visual studio

Client: Cerner, Kansas, KS

Role: Java Full Stack Developer

August 2019 –July 2020.

- Worked and led on various project methodologies like **Agile** Software Development, Testing and Scrum.
- Developed a GUI using **Angular 7** that enabled users to interact dynamically at runtime.
- Involved in Creating **Angular** controllers, directives, models for different modules of the application.
- Designed the UI using **HTML5**, **CSS** and connected various pages using JavaScript for interactivity.
- Involved in the development of services with **Angular** injectable property, as to make the service available for dependency injection when creating components.
- Created reusable templates using **Angular directives** and worked with **NPM** package manager tools (**Node JS**).
- Used **Node.JS** to run Angular on server with mock **JSON** data and completed the UI development independent of server. Extensively involved in the integration of the Front-end web interface with the **Spring MVC**, **Angular**, **JSP**, **HTML**, **CSS** and **jQuery**.
- Used **spring** framework and **J2EE** components, Utilized **Spring MVC**, **IOC**, **AOP** and **DAO** modules. Developed controller classes, backend processes, complex services and database interaction.
- **Implemented Spring Security** to provide authentication and authorization functionalities, ensuring secure access to application endpoints.
- **Implemented JWT** for secure token-based authentication in the microservices architecture.
- **Implemented caching** mechanisms using Spring Boot's caching abstraction with providers like **EhCache/Redis**, optimizing performance by reducing redundant database queries.
- Utilized **Spring Boot Actuator** to monitor and manage application health, providing real-time insights into performance metrics, request tracing, and application diagnostics.
- Configured **Spring Boot Profiles** to manage different application environments (development, testing, production) for seamless deployment and environment-specific configurations.
- Implemented **Spring Controllers**, Processors, Display classes, Command classes, and Beans. While Creating web services based on **Rest** Architecture using **Spring Boot** framework.
- Employed **Microservice** architecture using Spring Boot to modularize code and implemented **Rest API's** using **Spring Rest**.
- Worked with **Spring Data JPA** to interact with relational databases, simplifying data access layers and writing custom queries using **JPQL** and **Criteria API**.
- Responsible for managing **Microservices** i.e. design, deployment and supporting documentation. Analyze, design and develop solutions to complex business and technical problems.

- Wrote stored procedures, complex queries using **PL/SQL** to extract data from the database, delete data and reload data on **Oracle DB**.
- Developed, and deployed cloud-based solutions using **Azure services** like **App Services**, **Azure Functions**, and **Azure Kubernetes Service (AKS)**.
- Implemented and managed **CI/CD pipelines** using **Azure DevOps**, automating build, test, and deployment processes for seamless integration and faster delivery cycles.
- Implemented security measures using **Azure Active Directory (AAD)**, **Role-Based Access Control (RBAC)**, and **Managed Identities** to secure applications and resources.
- Deployed containerized applications using **Azure Container Instances (ACI)** and **Azure Kubernetes Service (AKS)** for scalable and efficient microservices management.
- Led the **end-to-end testing** process through **ALM**, including test planning, execution, and defect tracking, ensuring comprehensive coverage and efficient resolution of defects across various modules.
- Developed and executed both **manual** and **automated test** cases in **ALM**, ensuring traceability of requirements to test cases, and used ALM for tracking test results, improving overall test management and reporting efficiency.
- Coordinated and executed **production deployments**, following best practices for release management and ensuring minimal disruption during deployment windows.

Environments: Java8, Spring boot, Rest API, Maven, NodeJS(v16), NPM, Angular 7, Bootstrap, CSS, Azure DevOps, Docker, PL/SQL, Oracle, ALM, Jira, GitHub, Confluence, Postman, STS, Visual studio, Eclipse

Client: Citi Bank, Dallas, TX

Role: Java Full Stack Developer

Jan 2019- August 2019.

- Worked on **Agile** methodology with planning and estimation sessions and also participated in Scrum meetings for daily status calls.
- Developed UI applications using **HTML5**, **CSS3**, **AngularJS**, **Bootstrap**, **JSON**, **JSP** and **JavaScript**.
- Worked on Bootstrap framework for developing various mobile and web applications and also used **SOAP API** services.
- Good strong experience in creating web applications using **Angular 7**, **Node JS**, and **MongoDB** with **HTML**, **CSS**, **JavaScript**, **jQuery**.
- Implemented Typescript reusable components and services to consume **REST API's** using Component-based architecture provided by **Angular**.
- Build **Restful API** web services using **Node JS** and **Express JS** and used a full complement of Express, **Angular**, **Node.JS**, and **MongoDB** to store and present assessments.
- Worked in developing **REST APIs** using spring boot hosted all micro services on **Pivotal Cloud Foundry (PCF)**.
- Used **Microservices** architecture, with **Spring Boot** based services interacting through a combination of **REST** and **Spring Boot**.
- Implemented **integration testing** using **Spring Boot Test** framework to test service layers and REST APIs. Used **MockMvc** to simulate HTTP requests during tests.
- Utilized **Spring's dependency injection** (via **@Autowired** and **@Qualifier**) to manage and inject services, ensuring loose coupling between application components.

- Implemented real-time communication between clients and servers using **Spring WebSocket** in a Spring Boot application.
- **Performed end-to-end testing** using Spring Boot's embedded server and test-specific configurations.
- Strong experience with relational databases like **Oracle, MySQL** and non-relational database **MongoDB**.
- Worked on **JIRA** tool which includes User management, workflow and field modification, installation of **JIRA-GIT** plugin.
- Created Proxies in **AWS Lambda** for backend APIs for faster response and better accessibility.
- Hands-on experience on developing **AWS** cloud formation templates and setting up scaling for **EC2** instances and involved in the automated provisioning of **AWS** cloud environment.
- Developed and maintained automated test scripts using **Selenium** WebDriver to validate UI functionality across multiple browsers.
- Designed and implemented **Selenium test cases** for functional testing of web applications, ensuring high test coverage and reliability.
- Integrated Selenium scripts with **TestNG/JUnit** for test execution and reporting, ensuring reusable and modular test cases.
- Logged and tracked bugs in **JIRA/ALM**, ensuring timely resolution and improving product quality.

Environments: Java8, Spring boot, Rest API, Maven, NPM, AngularJS(v7), Bootstrap, Typescript, NodeJS(v14), ExpressJS, AWS, Jenkins, PCF, MySQL, Oracle, MongoDB, Selenium, Jira, GitHub, Confluence, TestNG, Junit, Postman, STS, Eclipse, IntelliJ

Client: DBS Bank (Capgemini India Pvt Ltd), Pune, India

Role: Java Developer

July 2017- Dec 2018.

- Involved in Agile/ Scrum Methodology for implementing the projects.
- Involved in setting up **Spring MVC** and **Hibernate** framework.
- Developed **Spring** and **Hibernate data layer** components for the application. Integrated business layer using Hibernate with **Spring Frameworks**. Involved in coding of **JSP, Servlets, Struts actions, Java Beans, EJBS**.
- Implemented real-time bi-directional communication between clients and servers using **Spring WebSocket** in a Spring Boot application.
- Developed complex **SQL** queries and Stored procedures to perform efficient data retrieval operations. Used **SQL, PL/SQL** and **Stored Procedures** for **Oracle** back-end database.
- **Performed end-to-end testing** using Spring Boot's embedded server and test-specific configurations.
- Developed a Java based ETL tool which extracts data from sources like **MySQL** and dumps data in the target tables in **MySQL** database.

Environments: Java7, Spring MVC, Spring boot, Struts, JSP, MySQL, Jira, GitHub, Confluence, STS, IntelliJ

Client: Wawanesa Insurance (Capgemini India Pvt Ltd), Hyderabad, India

Role: Java Developer

July 2016- July 2017.

- Insurance domain related project to implement Personal lines products in 3 provinces of Canada.
- Performed Agile/ Scrum Methodology for implementing the projects.
- Performed on Struts framework for Controller components and view components.
- Implemented views using struts tags, and expression language.
- Implemented Session Bean **Components** and **Entity Beans (CMP)** which will manage transactions with the database that helps to deliver the content to the presentation layer and store data into the data layer.
- Worked on **AJAX** to make Asynchronous Requests for better performance and reliability.
- Implemented **MAVEN** build scripts for compiling and building the project.
- Used coding **SQL** Statements and Stored procedures for back-end communication using JDBC and used logging mechanism using **log4j**. Used Log4J for logging all the debugging and error information.
- Investigated and identified root causes of **production issues**, implementing fixes to improve system stability and prevent future occurrences.
- Actively involved in **post-production support**, diagnosing and resolving issues in real-time to ensure smooth operation and minimize downtime for end-users.

Environments: Struts, JSP, J2EE, AJAX, Maven, Log4J, SQL, JIRA, Confluence, Splunk
