

Kavyasri Kunta

Business Intelligence Analyst | Data Analyst | SQL & Tableau Specialist
513- 289-3489 | kavyasrikunta17@gmail.com | www.linkedin.com/in/kavyasrikunta

Business Intelligence professional with hands-on experience in SQL, Python, R, Tableau, and data modeling. Skilled at building scalable dashboards, automating ETL pipelines, and generating actionable insights from large datasets. Highly detail-oriented, curious, and passionate about using data to drive business impact.

Skills & abilities

Programming Languages & Database: Python, R, C, Java, MySQL, DBMS, Snowflake, Oracle

Cloud & ETL Technologies: Azure, Jupyter Notebook, NumPy, Pandas, LIWC, Azure Data Factory

Analytics & Machine Learning: Statistics, Linear & Logistic Regression, Decision Trees, Random Forests, Naïve Bayes, Cluster Analysis, KNN, Neural Networks, A/B Testing, Text Mining, Natural Language Processing (NLP), Large Language Models (LLMs)

Data Visualization & Reporting: Power BI, Tableau, Metabase, Datadog tool, NodeXL

Productivity & Collaboration: MS Excel, MS Word, MS PowerPoint, Jira

Core Competencies: Data Analysis, BI reporting, Project Management, Data modeling, Dashboard development

Experience

Analyst | University of Dayton

May 2024 – June 2025

- Designed and developed an interactive Tableau dashboard to analyze fertility rates, literacy levels, and education expenditure across South Asia (**2000–2022**), enabling data-driven insights into how government investment in education impacts family planning trends.
- Built a performance bonus automation system in Python by integrating employee timesheet, sales, and qualitative evaluation data; implemented logic for bonus eligibility, capping, and error handling, and produced year-end reports for HR analysis.
- Developed and evaluated predictive churn models in R, including logistic regression, decision trees, LDA, and Naive Bayes, achieving an AUC of **0.85** and recommending retention strategies based on contract type, tenure, and billing behavior.
- Applied statistical methods in Excel such as hypothesis testing, ANOVA, and confidence intervals to interpret business data, validate assumptions, and estimate population metrics for strategic recommendations.
- Simulated operational performance of a bicycle repair shop using Excel to model random customer arrivals and repair durations, quantifying key service metrics including overtime, wait times, and technician idle rates across **1,000 scenarios**.

Data Analyst Intern | Band Connect

Aug 2024 - Sept 2024

- Queried and analysed sensor-based patient exercise data (**100K+ rows**) in Metabase to identify adherence gaps and exercise quality issues, improving compliance tracking accuracy.
- Designed and automated weekly and monthly clinical reports using Metabase, reducing manual report creation time by **40%** and enabling PTs to monitor patient trends in real time.
- Built and tested custom SQL queries to generate compliance scores, track therapy progress, and support clinician decision-making with enhanced adherence metrics.

Data Analyst | Accenture

Sept 2022 - July 2023

- Built SQL-based dashboards and automated pipelines, cutting manual reporting time by **40%** and enhancing KPI visibility.
- Analysed **500K+ operational records/month** to reduce deployment failures by **15%** and improve SLA adherence by **20%**.
- Automated anomaly detection and validation scripts, improving data integrity by **25%** and saving **20+ hours/month**.
- Partnered with 5+ teams to develop scalable BI tools, increasing dashboard adoption by **30%**.
- Designed ETL workflows for HA-DR logs, cutting downtime analysis time by **35%**.
- Created weekly summary reports and root cause analyses that helped technical leadership resolve performance gaps faster.

Data Analyst Associate | Accenture

July 2021 - Sept 2022

- Developed Datadog dashboards for system monitoring (CPU, RAM, IO), boosting visibility by **25%** and saving **20+ hours/quarter**.
- Resolved 50+ pipeline issues, improving data accuracy by **15%** and reducing reporting delays by **20%**.
- Streamlined backup scheduling and storage checks, saving **15+ hours/month**.
- Documented ETL processes to support new deployments and collaborated with 3+ teams to align technical reporting with business goals.
- Supported onboarding of new analysts by creating SOPs for troubleshooting, improving ramp-up speed, and reducing dependency.

Projects

Smart Quote Engine: Predictive BI for High-Value Opportunities

- Built predictive models in R (logistic regression, random forest) to forecast quote win probability, improving prediction accuracy by 28%.
- Engineered ETL workflows and cleaned 100K+ quoting records to support modelling and dashboard development in Tableau.
- Delivered executive-level insights that increased quoting efficiency by 20% and identified \$13M+ in potential profit capture.

Scalable Reporting System for Public Safety Data

- Engineered a repeatable Python ETL process to integrate DC traffic violations with NOAA weather data.
- Created a normalized schema in MySQL to support scalable analysis and dashboarding.
- Automated monthly updates and delivered visual summaries of violation trends and environmental factors.

Education

University of Dayton - Dayton, OH

Sept 2023 - June 2025

Master of Business Analytics

CMR Institute of Technology - Hyderabad, India

July 2017 - June 2021

Bachelor of Technology: Computer Science and Engineering
