

Kishan Rongali

San Bernardino, CA | 909-871-6390 | kishanrongali004@gmail.com | [LinkedIn](#)

Professional Summary

QA Analyst with 5+ years of experience in software engineering and cybersecurity, skilled in developing and executing test plans, writing test cases, and reporting defects. Strong understanding of SDLC and STLC, with hands-on experience using Jira for bug tracking and SQL for database validation. Proven collaborator with development teams to deliver reliable, high-quality applications across web and enterprise environments.

Professional Experience

Richemont

Feb 2025 - Present

Network Engineer

- Configured, monitored, and maintained enterprise network infrastructure including routers, switches, firewalls, and wireless access points to ensure high network availability.
- Troubleshot Layer 2 and Layer 3 network issues using Wireshark, ping, traceroute, and network monitoring platforms, reducing downtime and improving service reliability.
- Managed VLANs, TCP/IP, DNS, DHCP, VPN, and routing protocols to support secure communication across multiple business locations.
- Installed, configured, and upgraded Cisco network devices while ensuring compliance with organizational security and networking standards.
- Supported firewall policy implementation, VPN connectivity, and access control configurations to strengthen network security.
- Created and maintained network documentation and topology diagrams, and participated in incident response and root cause analysis for network-related issues.

California State University, San Bernardino

Dec 2023 - Dec 2024

Research Intern

- Developed a behavioral-based ransomware detection framework to identify zero-day attacks beyond traditional signature-based methods.
- Analyzed system activity patterns such as mass file encryption and abnormal CPU/memory usage to detect threats in real time, implementing anomaly detection techniques to reduce false positives.
- Explored adversarial attack resistance and designed a conceptual incident response workflow for automated threat mitigation.
- Researched federated learning approaches for privacy-preserving threat intelligence sharing.

Info Allies

Aug 2021 - Jul 2023

Associate Software Engineer

- Engineered and maintained embedded systems for maritime signal transmission, ensuring uninterrupted ship-to-shore communication across mission-critical operational environments.
- Monitored and optimized real-time signal pipelines, proactively diagnosing and resolving transmission failures to maximize system uptime and safeguard data integrity.
- Led systematic code reviews across engineering teams to enforce organizational best practices, security standards, and coding compliance - significantly reducing vulnerability exposure.
- Architected and delivered well-designed, testable, production-grade code using standardized development processes, streamlining software production and improving release reliability.
- Collaborated with cross-functional teams spanning QA, UI/UX designers, product owners, and business analysts to deliver high-quality products aligned with stakeholder requirements.

Dartin Technologies

Aug 2020 - Jul 2021

Junior Software Developer

- Developed Java and JavaScript enterprise web applications integrating REST APIs and SQL database operations, delivering 4+ client-facing features per sprint in Agile/Scrum cycles using Git and Jira.
- Validated REST API workflows through SQL-backed verification and managed defect lifecycle tracking across 3 production applications serving 500+ users.

Hitachi Solutions

Sep 2019 - Jun 2020

Software Engineer Intern

- Built enterprise web applications using C#, ASP.NET, SQL Server, and JavaScript, and designed WCF services enabling secure communication between 4 distributed systems.
- Performed SQL query optimization and schema design that improved query response time by 20%, contributing to the full SDLC across 2 client-facing applications.

Skills

- **Programming Languages:** C, C++, C#, Java, JavaScript, HTML, CSS, Python
- **Frameworks & Technologies:** ASP.NET, WCF, REST APIs
- **Networking:** TCP/IP, DNS, DHCP, VLANs, VPN, Routing & Switching, Cisco Networking, Network Troubleshooting
- **Security Tools:** Splunk, Wireshark, Nmap, SIEM
- **Databases:** SQL Server, MySQL
- **Operating Systems:** Windows, Linux
- **Tools & Methodologies:** Git, Jira, Agile/Scrum, Software Development Life Cycle (SDLC), Software Testing Life Cycle (STLC), Test Case Writing, Defect Reporting, Azure DevOps, TestRail, Postman, Selenium, Cypress, Appium, API Testing, Code Reviews
- **Certifications:** CCNA, MCSE, Linux Administration, Claude Platform 101 (Anthropic), AI Fluency Framework & Foundations (Anthropic), Introduction to Claude for Work (Anthropic)

Education

- California State University, San Bernardino (CSUSB)

2025
- Master of Science, Information Systems & Technology (Cybersecurity)

San Bernardino, CA
- **Achievements:** Graduate Research: AI-Driven Ransomware Behavioral Detection, Federated Learning, Ethical AI Governance
- Vignan's Institute of Information Technology

2020
- Bachelor of Technology, Information Technology
- **Achievements:** Capstone: Biometric Authentication System for Electoral Integrity
