

KYRON MCKENNA

Senior DevOps Engineer | Platform Engineer | Cloud Infrastructure

Denver, CO • (651) 785-3406 • contactkyronmckenna@gmail.com • [linkedin.com/in/kyronmckenna](https://www.linkedin.com/in/kyronmckenna)

PROFESSIONAL SUMMARY

Senior DevOps and Platform Engineer specializing in multi-cloud infrastructure at scale across 180+ AWS and Azure environments under PCI DSS and FedRAMP compliance contexts. Architect of internal developer platforms, ephemeral environments, and Terraform module ecosystems that eliminate ticket-based provisioning and shorten release cycles from days to minutes. AWS Solutions Architect – Professional certified.

SKILLS

Cloud Platforms: AWS (Solutions Architect – Professional), AWS GovCloud, Azure

Platform Engineering: Internal Developer Platforms, Self-Service Portals, Ephemeral Environments, Golden Paths, Reusable IaC Modules

Infrastructure-as-Code (IAC): Terraform, OpenTofu, Scalr, CloudFormation, Ansible

Containers & Orchestration: Kubernetes (EKS), Helm, Docker, ECS, Packer (AMI/image building)

CI/CD & Automation: GitHub Actions, Azure DevOps, AWS CodePipeline, AWS CodeBuild, Bitbucket Pipelines

Networking: Multi-Account VPC, Transit Gateways, Site-to-Site VPN, Route 53, CloudFront, Cloudflare

Observability: Datadog, Grafana, CloudWatch, ELK Stack, TrendMicro, Zabbix, SNS/PagerDuty alerting

Languages, Scripting & OS: Python, Bash, PowerShell, YAML, Linux, Windows Server

Databases: Amazon RDS, Aurora, DynamoDB, MySQL, Snowflake, Databricks

Compliance & Governance: PCI DSS, FedRAMP, AWS Config, AWS Organizations, FinOps / Cost Optimization

PROFESSIONAL EXPERIENCE

DevOps Engineer II • *i3 Verticals (remote)*

05/2022 – Present

- Architected an internal developer platform with self-service CI/CD pipelines and reusable Terraform modules, enabling on-demand provisioning of compute, databases, and services through a portal — eliminating ticket-based provisioning and accelerating release cycles.
- Built ephemeral environment platform integrated with GitHub Actions, enabling developers to spin up fully functional, production-like environments on demand in under 10 minutes with automated provisioning and teardown, cutting feedback loops from days to minutes and reducing non-prod cloud spend.
- Designed and deployed a secure multi-tier VPN providing company-wide access to 180+ AWS and Azure environments, replacing 40+ legacy point-to-point tunnels and reducing VPN-related support tickets by 60%.
- Led organization-wide adoption of Scalr for Terraform IaC management, driving code migration, automating stack provisioning via pipelines, and onboarding developers to enable seamless integration of newly acquired companies into the AWS Organization.
- Spearheaded multi-cloud expansion to Azure, designing secure landing zones, implementing best-practice security controls, and optimizing costs across the new estate.
- Led cloud migration of 18 on-premises applications (databases, Linux/Windows servers, DNS, CI/CD systems) to AWS in seven months, improving scalability and resiliency.
- Provisioned and managed AWS GovCloud accounts via Terraform, refactoring modules for partition compatibility (aws-us-gov) to support workloads with elevated federal compliance requirements.
- Operated production Kubernetes (EKS) clusters for stateful and stateless workloads, managing Helm-based deployments, ingress, and autoscaling, and authoring reusable manifests and pipelines that standardized how teams ship services to production.
- Conducted annual compliance audits across 90+ AWS accounts with AWS Config; remediated 700+ non-compliant resources within three weeks to achieve PCI DSS and FedRAMP alignment.
- Designed and implemented automated secret rotation for MySQL database users and IAM credentials using AWS Secrets Manager and Lambda, eliminating manual credential rotation and reducing credential-related incident risk.
- Participated in a weekly on-call rotation; drove alert tuning and noise reduction efforts that cut alert volume by 80–90%, improving signal-to-noise ratio and on-call quality of life.

- Embedded DevSecOps scanning into GitHub Actions pipelines using Trivy for container and IaC scanning, Snyk for Dockerfile vulnerability scanning, and Dependabot for automated dependency PRs across the organization.
- Authored production runbooks for in-place database and broker engine upgrades (Aurora MySQL, Amazon MQ RabbitMQ), enabling repeatable, low-risk maintenance across environments.
- Led bulk migration of 50+ repositories from Azure DevOps to GitHub, including history preservation, pipeline conversion to GitHub Actions, and branch protection / required status check enforcement across all migrated repos.
- Built and maintained CI/CD pipelines in GitHub Actions, Azure DevOps, and Bitbucket, standardizing build, test, and deploy stages across dozens of repos and reducing release errors.
- Implementing policy-as-code via OPA in Scalr to enforce required tag presence, formatting standards, and allowed values across all Terraform-managed resources, improving governance and cost allocation accuracy.

Systems Administrator • *WorkWave (remote)*

05/2021 – 05/2022

- Led consolidation of 100+ VPNs into a single high-availability, hardened cluster; deployed via Terraform with monitoring through CloudWatch, Zabbix, and the ELK Stack (Slack alerts via SNS), saving \$70,000+ annually and reducing administration effort by 95%.
- Maintained 1,500+ servers in AWS including patching, security hardening, and monitoring optimization; sustained 99.9% monthly uptime and closed monitoring gaps with Zabbix and the ELK Stack.
- Designed and built client environments hosted within AWS using CloudFormation, including RDGW, web servers, client servers, SQL servers, and app servers, resulting in improved scalability and reduced deployment times.
- Administered over 900 employees, providing support with tickets and setting up automation rules within Jira to streamline tasks and processes.
- Conducted infrastructure audits with scripting to discover unused or over-provisioned resources, resulting in yearly savings of over \$150,000.
- Increased team productivity by developing and implementing PowerShell scripts to automate repetitive or time-consuming tasks, reducing manual effort and increasing efficiency & productivity.
- Provided incident response for networking and system issues, updated current monitoring and alerting to provide awareness before customer impairment, and managed backups and disaster recovery plans.

Freelance Cloud Engineer • *Independent Consulting (remote)*

09/2020 – 05/2022

- Designed, built, and maintained highly available infrastructure using AWS CloudFormation, codifying multi-tier web application stacks and accelerating repeatable deployments.
- Managed service uptime and availability by utilizing AWS load balancers, auto-scaling groups, and CloudFront caching. Achieved 99.8% monthly uptime Service Level Objective (SLO).
- Implemented CloudWatch metrics and dashboards for performance and cost tracking, reducing monthly cloud costs by over 50% while improving application performance.

CERTIFICATIONS & EDUCATION

- **AWS Certified Solutions Architect – Professional**
- **AWS Certified Solutions Architect – Associate**

Self-directed learner. Progressed through the AWS certification track alongside ongoing study in platform engineering, GitOps, and cloud-native security.
