Experience

ByWater Solutions

Jan. 2025 – Dec. 2025

Software Developer I (Jan. - Oct.) — Software Developer II (Oct. - Dec.)

Remote Work

- Developed, maintained, and enhanced features for Aspen Discovery ([🔗 GitHub](#)), an open-source library catalog application, using PHP, Java, and JavaScript with jQuery.
- Debugged, improved, and expanded functionality for Aspen LiDA ([🔗 GitHub](#)), a companion mobile application to the Discovery layer, using JavaScript, React Native, and Expo.
- Collaborated closely with team members to troubleshoot, debug, and resolve issues reported by clients, employing SOLR for search optimization and MySQL for database management.
- Built and customized features to support unique library workflows, integrating third-party services to streamline and enhance the user experience.
- Managed codebase contributions using GitHub for version control and collaborative development, ensuring seamless integration and deployment with Docker containers.
- Provided technical support and communicated effectively with clients to ensure smooth operation and optimal utilization of Aspen Discovery, utilizing Linux and Apache for server management.

Education

Iowa State University of Science and Technology

Aug. 2020 – May 2024

Bachelor of Science in Computer Science with a Minor in Economics

Ames, Iowa

GPA: 3.77 | Magna Cum Laude

Projects

VetGo Application | Role: Full Stack Developer

Feb. 2024 – May 2024

- Collaborated with a team to develop VetGo, an Uber-like, cross-platform application designed to simplify and ease the process of scheduling veterinary appointments.
- Utilized MySQL to create screening questions for pet owners to assess symptoms and provide actionable recommendations.
- Implemented a secure forgot-password feature with token generation and email confirmation.
- Enhanced the backend to support new database structures for pet information management.
- Integrated location services using Google APIs for managing user and veterinarian locations.
- Improved frontend navigation and user experience using React Native and Expo.

Machine Learning Project on Happiness Prediction

Oct. 2023 – Dec. 2023

- Developed a machine learning model to predict happiness scores from the World Happiness Report.
- Utilized Python and libraries such as Pandas, NumPy, and Matplotlib for data analysis and visualization.
- Applied machine learning techniques with Scikit-Learn for predictive modeling, including support vector regressor (SVR), random forest regressor (RFR), and gradient boosting regressor (GBR).
- Leveraged PyTorch to develop and implement a neural network model.
- Presented findings in a detailed report, describing the project, related work, methodology, and results.

StudyUp Website | Role: Full Stack Developer

Sept. 2022 – Dec. 2022

- Engineered a comprehensive website to provide the following study tools: notes, flashcards, and quizzes.
- Employed Visual Studio Code for integrated development and Figma for wireframing and design prototyping.
- Developed the front-end using React and JavaScript, creating an interactive and responsive user interface.
- Implemented the back-end using Node.js and AJAX for efficient server-side operations.
- Managed data storage and retrieval using MongoDB with Mongoose for database schema modeling.
- Ensured code reliability and functionality through unit-testing with JUnit and system-testing with Jest.

Infinity Application | Role: Frontend Developer

Jan. 2022 – May 2022

- Collaborated with a team to develop a social media app with notes, guilds, and profiles using the SCRUM model.
- Utilized Android Studio for frontend development, creating an intuitive and engaging user interface.
- Managed version control and collaborative coding efficiently through Git and GitLab with CI/CD pipeline to automate testing and deployment processes.
- Built HTTP Requests for server communication and used Postman for API testing and debugging.

- Adhered to the Model-View-Controller (MVC) architecture for maintainable and scalable code structure.
- Incorporated Websockets for real-time user interaction and communication features.
- Conducted frontend testing using JUnit and Espresso to ensure robustness and high-quality performance.

Garry's Mod DarkRP Server | *Role: Owner/Developer*

July 2020 – April 2021

- Developed and managed a popular Garry's Mod DarkRP server, implementing custom scripts and features with the Lua scripting language.
- Collaborated with a team of administrators to maintain server performance, enforce rules, and handle player feedback.
- Designed a robust economy system and administrative tools to manage in-game resources and player interactions.
- Managed server hosting, configuration, and security to ensure a stable and secure gaming environment.
- Leveraged community engagement through forums and social media to grow the player base and foster a positive community atmosphere.
- Generated revenue through donations and in-game purchases, achieving profitability while maintaining a fair and enjoyable player experience.

Technical Skills

Languages: Python, PHP, Java, C/C++, C#, HTML/CSS, JavaScript (jQuery), TypeScript

Developer Tools: Visual Studio, Visual Studio Code, Eclipse, IntelliJ, Android Studio, Maven, Gradle, Postman, Linux

Technologies/Frameworks: Git/GitHub/GitLab, SpringBoot, React (React.js and React Native), Node.js, AJAX, Expo, JUnit/Jest, Espresso, Apache

Database Management: Entity-Relationship Modeling, Relational and Graph DBMS, MySQL, MongoDB, Query Optimization, Database Application Development

User Interface Design: UI/UX Design Principles, Web and Desktop Interface Development, Frameworks and APIs for UI Construction, Event-Driven Programming

Game Development: Video Game Programming, Game Engine Interfaces, 2D and 3D Graphics

Machine Learning: Supervised and Unsupervised Learning, PyTorch, Scikit-Learn, TensorFlow, Model Evaluation, Feature Engineering
