SUMMARY:

Experienced Java Full Stack Developer with 5+ years of professional expertise in designing, developing, and deploying web applications using Java, Spring Boot, and microservices. Proficient in Test-Driven Development (TDD) and Agile methodologies, with expertise in cloud platforms like PCF, Azure, and event streaming frameworks like Kafka. Skilled in SQL/NoSQL databases, distributed systems, and performance optimization.

TECHNICAL SKILLS:

Programming Languages: Java (JDK 17+), C, Python, R. **Web Technologies:** JavaScript, PHP, Node.js, HTML, CSS, JSON
Frameworks: Spring Boot, Spring MVC, Spring Cloud, Django, Angular, React, Redux
Cloud platforms: Microsoft Azure, AWS, Google Cloud Platform
Database: PostgreSQL, MongoDB, MySQL, NoSQL, Oracle, Cassandra, Redis
Operating systems: Windows, Ubuntu. **Testing Tools:** JUnit, Mockito, Selenium, Postman
Software Tools: Eclipse, Visual Studio, Call Studio, Git **DevOps Tools:** Jenkins, Docker, Kubernetes, Terraform, GitHub Actions

EDUCATION AND TRAINING:

Master of Science in Computer Science (3.66 GPA) Computer Science, University of Illinois at Springfield, Springfield IL	2022-2023
Bachelor of Technology in Computer Science (3 GPA) Computer Science, CMR College Of Engineering and Technology, Hyderabad	2018-2022

PROFESSIONAL EXPERIENCE:

Client: Goldman Sachs, Richardson, Texas.	Jul 2024 - Present
Role: Java Full Stack Developer.	

- Developed scalable and secure microservices using Java 8, Spring Boot, and Kafka, adhering to modern architecture principles.
- Designed and implemented RESTful web services for seamless integration and efficient client-server communication.
- Leveraged Hibernate for ORM, ensuring efficient data management and reduced boilerplate code.
- Configured and optimized enterprise-level web servers, including WebSphere, for improved application performance.
- Implemented advanced authentication and authorization mechanisms using Spring Security.
- Automated deployment pipelines with Jenkins and GitLab, aligning with CI/CD best practices.
- Ensured efficient project life cycle management, contributing to both development and production support phases.
- Enhanced performance by optimizing database queries and utilizing JPA for seamless ORM interactions.
- Participated in Agile methodologies, utilizing tools like JIRA for sprint planning and issue tracking.
- Enhanced application scalability by deploying microservices on Spring Cloud platforms and monitoring performance.
- Led troubleshooting and resolution efforts for complex production issues, ensuring system stability.
- Conducted extensive testing with Postman and SOAPUI to validate API functionality and performance.
- Collaborated with cross-functional teams to drive technical discussions and deliver solutions.
- Leveraged Oracle PL/SQL and PostgreSQL for complex database operations and data modeling.
- Collaborated on GraphQL API endpoint development and frontend interfaces using Angular.
- Leveraged AWS cloud services for deploying and managing applications, ensuring cost efficiency and reliability.
- Enhanced system observability using logging and monitoring tools like ELK and Splunk.
- Built and managed fault-tolerant, scalable containerized applications using Docker on Kubernetes.
- Leveraged Terraform and CloudFormation for infrastructure provisioning and management, incorporating Camunda infrastructure to automate and version-control deployment of process engines and related components.

Client: United Airlines, Houston, Texas.

Oct 2022 – Nov 2023

Role: Java Full Stack Developer

- Engineered microservices using Java 8, Spring Boot, and Hibernate, ensuring high scalability and maintainability.
- Built RESTful services and ensured compliance with enterprise standards for API design and security.
- Developed JSP-based components and used JavaScript for interactive and dynamic web functionalities.
- Managed deployments and configurations on enterprise web servers such as JBoss and WebSphere.
- Followed the software development life cycle (SDLC), ensuring systematic and efficient development processes.
- Automated test cases and enhanced application stability through test-driven development (TDD) practices.
- Designed and implemented event-driven solutions with Kafka and MQ for asynchronous messaging.
- Utilized XML and JAXP for data transformation and integration between services.
- Monitored CI/CD pipelines and integrated DevOps tools to automate the build, test, and deployment process.
- Supported cross-functional teams in JIRA to prioritize and resolve security vulnerabilities.
- Collaborated on cloud-native deployment strategies across AWS, utilizing Lambda, S3, and RDS.
- Designed and executed workflows using Apache Flink and Airflow for data streaming and automation.
- Automated batch processes and workflows using Apache NiFi and Airflow.
- Delivered high-quality code by implementing unit testing with JUnit and conducting peer code reviews..
- Actively participated in Agile development cycles, contributing to sprint planning and reviews.
- Designed and implemented fault-tolerant systems, focusing on multithreading and performance tuning.
- Experience with creating scripts for data modeling and data import and export. Extensive experience in deploying, managing and developing MongoDB clusters. Experience in creating JavaScript for using DML operations with MongoDB .

Client: Accenture, Hyderabad, India.

July 2019–July 2022

Role: Application Developer.

- Developed robust applications using Java/J2EE technologies, focusing on frameworks like Spring and Hibernate.
- Designed and implemented APIs, ensuring compatibility with REST principles for seamless client interaction.
- Built interactive web components using JSP and JavaScript, enhancing user experience.
- Deployed and optimized enterprise web servers, including WebSphere, for application hosting.
- Followed end-to-end SDLC processes, including development, testing, and production maintenance.
- Automated workflows using CI/CD pipelines and tools such as Jenkins and GitLab.
- Developed XML-based solutions and employed JAXB for object-to-XML mapping.
- Designed and maintained relational database schemas, optimizing performance using Hibernate and JPA.
- Automated development and deployment workflows through CI/CD pipelines using GitLab and Jenkins.
- Conducted extensive testing and debugging of modules to ensure reliability in global delivery environments.
- Enhanced system monitoring with Splunk and integrated logs with container orchestration systems like Kubernetes.
- Used OpenShift for enterprise-grade deployment, ensuring high availability and scalability.
- Optimized distributed algorithms to handle complex data operations and improve application efficiency..
- Conducted performance tuning and optimization for large-scale applications using Splunk and Dynatrace.
- Maintained compliance with best practices and standards, including WCAG 2.1 accessibility requirements.
- Maintained robust APIs adhering to RESTful standards and incorporated GraphQL endpoints.
- Implemented flow-based frameworks like Flink and Apache Airflow for workflow automation.

RELEVANT PROJECTS:

Log Analysis and Monitoring System (Java|SpringBoot|ElasticSearch|Logstash|Kibana)

- This model is designed to collect, analyze, and visualize application logs in real-time. This project helps in monitoring application performance, identifying issues, and gaining insights from log data.
- The system leverages Elasticsearch for indexing and searching logs, Logstash for log processing, Kibana for visualization, and Spring Boot for managing the application's backend services.

Chat Application with Real Time Notifications (Java|AWS API Gateway|AWS Lambda|AWS DynamoDB)

- This model is to develop a chat application that supports real-time messaging and notifications. The application leverages AWS services to ensure scalability, reliability, and efficient handling of real-time communications.
- This project highlights Java and AWS services to build scalable, efficient, and user-friendly applications, demonstrating your proficiency in cloud computing and real-time communication technologies.

Stock Screener and Scanner (Java|SpringBoot|MySQL|Chart.js|JSON Web Tokens|Docker)

- The project aims to provide users with a powerful and user-friendly tool for screening and analyzing stocks based on predefined criteria and market data.
- Data visualization is achieved using libraries like Chart.js or Highcharts to represent stock market trends and screening results visually
