Objective

A highly dedicated computer science professional with a strong foundation in patience and problem-solving. I am eager to expand my expertise in the field, continually learning and embracing new challenges. Seeking opportunities that allow me to broaden my horizons and make meaningful contributions to innovative projects in computer science.

Experience**Janitor**

Service Source, Fort Carson, Colorado
June/2021 – [Jan/2022]

- Swept and Cleaned Floors
- Clean tables and dishes
- Work in high stress cleaning with others specifically cleaning pots
- Fulltime

Housekeeper

Kingship Landing, 415 S Nevada Ave, Colorado Springs, CO 80903
July/2023

- Making Beds and Cleaning Rooms
- Scrubbing Toilets and Bathrooms
- Vacuuming Hallways and Laundry
- Part Time 24 Hours per week

Revature Trainee

Remote
Feb/2025 - [May/2025]

- Learning Basics of Java
- Enhanced Understanding of SQL
- Coding Projects applying Java, SQL, and Spring

Education

Bachelor of Science

Computer Science Major, Mathematics Minor

Colorado Mesa University, Grand Junction

August/2020 – May/2024

- Graduating GPA: 3.61
- Relevant Computer Science Coursework:
 - Computer Architecture/Assembly Lang
 - Adv Programming: Java/Kotlin
 - Adv Prog: Python
 - Software Engineering
 - Video Game Design
 - Database Design
 - Robotic Perception & Planning
- Relevant Mathematics Coursework:
 - Numerical Analysis
 - Mathematical Modeling
- Honors or Awards: Cum Laude

Skills

- **Exhibit proficiency in game development, efficiently designing and implementing feature extraction engines, and consistently delivering high-quality, performance-driven gameplay experiences**
- **A consistent high level of performance working with people and services requiring solid management, organization, time management producing goal driven results.**
- **Exceptional problem-solving abilities, effectively navigating complex challenges with strategic planning and methodical execution, consistently delivering targeted and impactful solutions**
- **Technical Skills: Java, Python, MySQL, Github, C++**

Projects

Feature Extraction Engine

The creation of a feature extraction engine to be used on PCAP files that would run through them and create a CSV folder filled with over 660 different types of data including IP length avg, payload length standard deviation and others, accounting both for UDP and TCP. On the project I had been responsible for programming the process of acquiring the data, while my colleague chose what data to look for. <https://github.com/sonia828/Feature-Extraction-Engine>

Farm Game

A school project for a video game design class. A small farm game in space. This was done through Simple DirectMedia Layer or SDL. In the project I had programmed the movement of the character, the mechanics for watering and the growth of plants, and for selling crops. Helped greatly in learning to work with others on projects and getting used with multiple contributors to Github. <https://github.com/teldrynsero/Farm-Game>

Volunteer Experience

Helper at Local Library

Pikes Peak Library District - Cheyenne Mountain Library, 1785 S 8th St #100, Colorado Springs, CO 80905

April/2018

- Restocking Books
 - Decorated the Library
-

Languages

- **English: Native**
-

Interests

- AI and Robotic Development especially those of the humanoid variety
 - Art, as I dabble in the creation of Pixel Art
-
