EXPERIENCE

BNY (formerly known as BNY Mellon)

Aug 2023 - Present

Software Engineer

Jersey City, NJ

- Developed and enhanced interactive data and analytics portlets for the Wealth Dashboard of Pershing's AI-powered NetX360+ platform using Angular and Spring Boot, presenting custodial client financial data through dynamic charts, graphs, and tables. The dashboard is used by 100,000+ financial advisors managing \$2.5T+ in assets.
- Designed, developed, and debugged RESTful APIs in Spring Boot, implementing robust service-layer logic to retrieve and process financial and user data from MongoDB (hosted on AWS DocumentDB). Utilized JPA/Hibernate for efficient ORM mapping and wrote optimized native SQL queries for complex data retrieval.
- Led a major front-end revamp, upgrading Angular to a modern version and redesigning the homepage with sleek UI improvements and enhanced usability. Implemented high-impact UX features, including drag-and-drop portlet reordering with session persistence (stored in AWS S3) and dynamic resizing of portlets, enabling additional data visualization (e.g., expanded charts/tables in larger views).
- Optimized backend performance by implementing Hazelcast caching in Spring Boot services, caching high-volume queries (10K+ rows) to reduce database load, mitigate resource-intensive operations, and resolve application crashes by 20%.

Cboe Global Markets

Jan 2023 - Aug 2023

Software Engineer

New York, NY

- Designed, developed, and deployed a Data Reconciliation page using Angular, Spring Boot, and PostgreSQL to automate data integrity checks and proactively identify system anomalies before they could impact production. Built a configurable rule-based validation engine that allowed users to define constraints on data (e.g., row count thresholds, specific value conditions) and continuously monitor query results. Implemented Spring Batch to schedule and execute SQL queries, integrated Kafka event streaming and SMTP email notifications to trigger alerts when constraints were violated, and optimized database interactions using JDBC with HikariCP to improve query performance and reduce latency.
- Implemented requested features and efficiently resolved reported issues on a web-based foreign exchange platform using Django, React, and Angular technologies on a regular basis as a member of the Webtools team.
- Designed and developed a continuous deployment (CD) tool that automatically triggered Jenkins test suites upon pull request creation, significantly increasing development efficiency and streamlining the testing process.

W.L. Gore & Associates

Summer 2022

Software Engineer Intern

Newark, DE

- Developed an analytics dashboard using React and Django, displaying reported issues in cardiovascular devices submitted to the FDA. Integrated data from a PostgreSQL database and presented insights through interactive charts and graphs for enhanced visualization and analysis.
- Created SQL database scripts for Postgres to facilitate capturing clinical trial data in stem cell research for treating Crohn's disease, managing data for five patients, each with reports containing 20+ pages of detailed information.

SKILLS

- Programming Languages: Java (Spring Boot), Python (Django, Flask), JavaScript/Typescript (Vue, React, Angular, Node.js, Jest), C/ C++ (Familiar), SQL (Postgres, MongoDB, Snowflake), JDBC, JMS, Bash, Rest/JSON/HTML/XML.
- Other: Git, AWS (EC2, S3), Redis, Azure, Selenium, Jenkins, Snowflake, Postman, SDLC, Agile/Scrum/JIRA

EDUCATION

Rensselaer Polytechnic Institute

Aug 2019 - Dec 2022

B.S. Computer Science

3.3 out of 4.0 GPA
