meghanagollapudi474@gmail.com | (832) 779-2348 | LinkedIn | Texas, USA (Open to Relocate)

PROFESSIONAL SUMMARY

Data Analyst and Engineer with 4+ years of experience building ETL/ELT pipelines, cloud data warehouses, and BI dashboards across insurance, healthcare, and technology domains. Proficient in Python, SQL, Snowflake, Apache Spark, dbt, Power BI, and Tableau across AWS and Azure environments. Proven ability to translate large-scale datasets into predictive models, KPI-driven dashboards, and data-driven recommendations that improve operational efficiency, reporting quality, and business decisions.

TECHNICAL SKILLS

- Languages: Python, SQL, PySpark
- BI & Visualization: Power BI, Tableau, Business Intelligence Reporting, KPI Development, Dashboard Design, Data Visualization, Advanced Excel (VBA, Power Query)
- Data Analytics & Governance: Stakeholder Management, Business Requirements Gathering, Data Validation, Data Quality Assurance, Data Integrity Checks, Reporting Automation, Data Documentation, Data Governance, Cross-functional Collaboration, Data-driven Recommendations
- Data Engineering: Apache Spark, ETL/ELT Pipelines, dbt, Apache Airflow, Apache Kafka, Data Modeling, Data Warehousing
- Cloud Platforms: Snowflake, BigQuery, AWS (S3, Lambda, Redshift), Azure Data Lake, Azure Databricks
- Databases: MySQL, SQL Server, PostgreSQL
- Machine Learning: Scikit-learn, Predictive Modeling, A/B Testing
- Tools: Git, Docker, JIRA

EXPERIENCE

Hartford Financial Services Group, USA

Jan 2025 -

Present

Data Analyst

- Collaborated with underwriting, operations, and finance stakeholders to gather business requirements, define KPIs, and deliver analytical solutions supporting strategic business decisions.
- Processed 5M+ insurance policy and claims records using Python, SQL, and Snowflake, building a unified risk segmentation model that improved accuracy by 18%.
- Orchestrated ETL workflows using AWS S3, Lambda, and SQL Server to consolidate structured and semi-structured claims data into Snowflake and BigQuery, reducing manual reporting effort by 35% and freeing 8+ analyst hours weekly.
- Implemented data validation, reconciliation, and data quality assurance procedures across Snowflake reporting datasets, improving data integrity and reducing reporting discrepancies by 25%.
- Designed Tableau and Power BI dashboards tracking underwriting KPIs, loss ratios, and policy performance, enabling leadership to identify risk trends and make decisions 30% faster.
- Delivered data-driven recommendations by analyzing customer behavior, claims patterns, and market trends, enabling leadership to improve operational efficiency and support business growth initiatives.
- Developed and maintained documentation for data sources, business definitions, reporting methodologies, dashboard specifications, and ETL workflows to support governance and knowledge sharing.
- Implemented Random Forest and Decision Tree models using Python and Scikit-learn to forecast claim volumes and premium trends, lowering quarterly forecast variance by 22%.

Alephys LLC, USA

Jan 2023 - Jul

2023

Data Engineer

- Partnered with product, marketing, and business stakeholders to define reporting requirements and build scalable analytics solutions aligned with organizational objectives.
- Migrated legacy Hadoop-based batch pipelines to Cloudera Data Platform (CDP) using Apache Spark and Python, reducing infrastructure costs by 30% and cutting average batch processing time from 6 hours to under 2 hours.
- Engineered ingestion pipelines on the migrated Cloudera and Snowflake stack using Python, Apache Spark, Apache Kafka, and AWS Lambda, processing 100M+ transactional records daily and reducing data processing costs by 25%.
- Optimized dbt transformation models and SQL queries across the Snowflake reporting stack, reducing BI dashboard load time from 8 seconds to under 3 seconds and cutting compute costs by 32%.
- Automated reporting processes and enhanced data governance practices through standardized data models, reducing manual effort and improving reporting consistency across departments.
- Performed regular data integrity checks and quality validation on large-scale transactional datasets to ensure accuracy and reliability of business-critical reporting.
- Delivered Tableau dashboards on standardized Snowflake data models tracking product adoption, funnel drop-off, and marketing ROI, reducing team decision cycle time by 25% and enabling weekly revenue planning.

Fusion Software Technologies, India

Jul 2020 -

Dec 2022

Data Analyst

- Worked closely with clinical and operational stakeholders to gather business requirements, establish reporting metrics, and develop actionable dashboards for healthcare decision-making.
- Analyzed 2M+ EHR records, patient demographics, and treatment histories using Python and SQL to surface clinical patterns, improving readmission prediction accuracy by 18%.
- Constructed ETL frameworks using Python, MySQL, Azure Data Lake, and Snowflake to consolidate data from 5+ disconnected hospital source systems, reducing integration time by 40% and enabling clinical teams to access unified patient data for care decisions.
- Developed Power BI dashboards with Snowflake direct query for 10+ hospital departments tracking bed occupancy, readmission rates, and discharge KPIs, cutting staffing decision time by 50% for 200+ clinical staff.
- Designed KPI-driven Power BI reports and visualizations that translated complex healthcare data into meaningful insights for both technical and non-technical audiences.
- Reduced Power BI reporting turnaround from 4 days to 2 days by scheduling automated Snowflake refresh jobs via Python, enabling department leads to adjust staffing and resource allocation same-day.
- Created detailed documentation for ETL processes, data models, report definitions, and data governance procedures, improving transparency and maintainability across reporting systems.
- Automated 20+ weekly reports across 5 departments using Python and Advanced Excel (VBA, Power Query), cutting turnaround from 10 hours to under 7 and saving 15+ analyst hours weekly across departments.

PROJECTS

Hospital Readmission Risk Pipeline

Python |

Airflow | Snowflake | dbt | Power BI | Docker | 2024

- Built an end-to-end pipeline ingesting daily EHR batch feeds into Snowflake via Airflow DAGs with automated failure alerting and retry logic for high-risk patient identification.

- Transformed raw clinical records using dbt into a clean analytics mart across diagnosis, vitals, and discharge tables, then trained a Gradient Boosting classifier on 15 engineered features achieving 82% prediction accuracy.
- Surfaced daily risk scores through a Power BI dashboard showing 30-day readmission trends per department, enabling care teams to prioritize high-risk patients and reducing avoidable readmissions by 12%.

E-Commerce Sales Analytics Pipeline

Python | SQL

| dbt | Tableau | 2023

- Built automated ELT pipelines using Python, SQL, and dbt consolidating 1M+ monthly sales records into a single Snowflake analytics layer for product performance reporting.
- Conducted A/B analysis using Python and pandas on promotional campaign data, identifying 2 high-converting customer segments and integrating findings into Tableau dashboards used weekly by marketing.
- Enabled leadership to reallocate budget to top-performing product lines based on real-time revenue insights, improving sales forecast accuracy by 18% and reducing manual reporting workload by 40%.

Credit Risk Prediction & Analytics Dashboard

Python | SQL

| Scikit-learn | Tableau | 2023

- Evaluated 50K+ loan applications using Python and SQL to engineer risk features across credit history, income bands, and delinquency patterns.
- Built a Logistic Regression classifier achieving 85% prediction accuracy and integrated risk scores into a Tableau dashboard enabling loan officers to benchmark applicants against portfolio risk thresholds.
- Reduced average credit review time by 60% and cut high-risk loan approvals by 20%, giving the lending team a repeatable, auditable framework for credit decisions.

EDUCATION

-
- Master of Science - Computer and Information Sciences | University of North Texas, USA | May 2023
 - Bachelor of Technology - Computer Science and Engineering | Vignan Institute of Technology and Science, India | May 2022
