Available: May 2025 – Dec 2025

EDUCATION

Northeastern University , Boston, MA	Sep 2024 – Present
Khoury College of Computer Sciences	Expected Graduation: Dec 2026
Candidate for a Master of Science in Computer Science	GPA: 3.6/4.0
Related courses: Programming Design Paradigm, Algorithms, Fundamentals Of AI	
Anna University , Chennai, India	Sep 2020 – Apr 2024
Bachelor of Engineering in Computer Science,	GPA: 8.1/10.0
Related courses: Object Oriented Programming, Data Structures, Software Engineering, C# and .NET	

TECHNICAL SKILLS

Languages & Web Technologies:	Java, JavaScript, Python, C++, C#, C, Swift, PHP, Kotlin, HTML, CSS, React, Tailwind
Databases:	SQL, MongoDB
DevOps & Cloud:	AWS (S3, EC2), Docker, Git, CI/CD Pipeline
Frameworks & Libraries:	React, Flask, Django, Tailwind, Express.js

WORK EXPERIENCE

Synergy Folks Inc. , Escondido, CA, AI Product Development Intern	May 2025 – Aug 2025
- Developed RESTful AI endpoints with Spring Boot and Spring AI to integrate large language model (LLM) outputs into production microservices for intelligent data processing. - Architected DL4J-based pipelines that transformed 1000+ data records into embeddings stored in a vector database, enabling high-accuracy semantic retrieval and fine-tuning of LLMs on domain-specific data. - Deployed containerized LLM workflows using Ollama and Docker, reducing setup time by 50%.	

PROJECTS

Image Manipulator Java, MVC, JUnit (Code available upon request)	Oct 2024 – Dec 2024
- Engineered an image processing application using Java and MVC architecture, implementing 15+ advanced manipulation features including compression, color correction, and filtering, resulting in a tool for complex image editing tasks. - Designed and implemented an intuitive graphical user interface (GUI) that increased user interaction efficiency by 30%, significantly enhancing the overall user experience and productivity in image editing workflows. - Created a comprehensive test suite using JUnit, achieving 95% code coverage and ensuring high reliability and maintainability of the application, while reducing bug occurrence by 40% in production.	
MBTA Tracker Python, Flask, SQL Alchemy, HTML/CSS/JS GitHub	Oct 2024 – Dec 2024
- Developed a full-stack transit tracking web application using Flask and SQL Alchemy with secure authentication, processing 500+ MBTA API calls daily to deliver schedules, alerts, and stop information. - Designed relational database schema and ORM models to manage 1,000+ records of routes, stops, user profiles, and feedback, ensuring scalable commuter data management. - Built dynamic frontend interfaces with HTML, CSS, JavaScript, and Jinja2 templating, enabling real-time commuter dashboards for streamlined access to schedules, favorite stops, and travel groups.	
AR Study App Kotlin, C#, Unity, Vuforia Published (IC3IoT) GitHub	Oct 2023 – Mar 2024
- Built an AR study app in Unity with Vuforia, integrating 10+ interactive 3D models for science learning. - Integrated image recognition technology, enabling the app to identify and display relevant AR content for more than 20 different textbook pages, resulting in a 40% increase in student engagement. - Enhanced AR rendering to achieve 60 FPS on mobile, improving app responsiveness and user experience by 25%.	
MediRX Vue.JS, JavaScript, Express.JS, MongoDB GitHub	Sep 2022 – Nov 2022
- Implemented an NFC-based medical record management platform using Vue.js, Express.js, and MongoDB, enabling instant access to 1000+ patient records and reducing retrieval time by 75%, significantly enhancing healthcare provider efficiency. - Integrated robust security measures including AES encryption, ensuring HIPAA compliance and safeguarding sensitive medical data, while maintaining 98% uptime during stress testing with 500 concurrent users. - Automated processes for 75% lower operational overhead, enhancing efficiency and patient care quality.
