

MOHIT JAWALE | JAVA FULL STACK DEVELOPER

Mjawale995@gmail.com | +1 (669)-200-9671 | [LinkedIn](#) | Santa Clara, California

SUMMARY

Results-driven Java Full Stack Developer with 5+ years of experience architecting scalable, high-performance web and backend systems across fintech, mobility, and semiconductor domains. Expert in Java 17, Spring Boot, React.js, and cloud-native technologies including Docker, Kubernetes, and AWS. Proven success optimizing system performance, enhancing security, and driving full lifecycle feature development. Skilled in distributed systems, real-time analytics, and secure API integration. Strong collaborator and mentor with a commitment to clean, maintainable code and agile best practices.

PROFESSIONAL EXPERIENCE

Java Full Stack Developer - Qualcomm | Santa Clara, US

Feb 2024 - Present

- Reduced GPU driver compilation time by 40% by refactoring build pipelines leveraging Java 17, Spring Boot 3, and GraalVM for parallel task execution in native builds, improving CI/CD efficiency and build scalability.
- Designed and developed a real-time modem diagnostics dashboard using React 18, WebGL, and RESTful APIs, enabling hardware teams to debug 5G connectivity issues 50% faster and enhancing cross-team collaboration.
- Built robust automation frameworks using Jenkins, JUnit 5, and custom hardware simulators to achieve 95%+ unit and integration test coverage on embedded system APIs, supporting continuous testing in Agile sprints.
- Optimized PostgreSQL queries and implemented advanced indexing strategies to enhance patent lookup service performance, reducing average search latency from 15 seconds to under 2 seconds and improving overall database efficiency.
- Deployed and monitored containerized AI workloads using Kubernetes and Docker, configuring resource limits and horizontal pod autoscaling (HPA) to increase on-device ML inference test throughput by 35%.
- Strengthened chipset API security by integrating OAuth 2.0 authentication, implementing rate limiting, and aligning with Qualcomm's internal QTI Security Framework, ensuring compliance with enterprise security standards.
- Mentored 3 junior engineers on Spring Boot performance tuning, React component optimization, and state management patterns, improving their productivity and feature delivery speed by 30% within Agile development cycles.
- Collaborated closely with cross-functional teams, including hardware engineers, DevOps, and security, to deliver end-to-end solutions with CI/CD pipelines and infrastructure as code (IaC).

Java Full Stack Developer - PayTM | Pune, India

Aug 2018 - Sep 2022

- Scaled core payment gateway microservices architecture to reliably handle 5M+ daily transactions with 99.99% uptime, ensuring seamless performance and fault tolerance during high-volume seasonal events like Diwali and Big Billion Days.
- Led redesign of merchant dashboard frontend using React.js, Redux, and WebSockets, implementing asynchronous data fetching and efficient state management that reduced report generation latency from 2 hours to 15 minutes, significantly improving merchant analytics and partner satisfaction.
- Architected improved MongoDB schema design and developed optimized aggregation pipelines for voucher redemption services, boosting cashback redemption speed by 60% during promotional campaigns and ensuring data consistency under heavy load.
- Built a scalable real-time fraud detection system using Apache Kafka streams and event-driven microservices, processing over 500K transactions daily and successfully blocking fraudulent transactions valued at ₹2Cr+ (~\$250K) per month.
- Executed migration of legacy monolithic payment modules to serverless architecture on AWS Lambda, applying API Gateway and AWS CloudFormation, resulting in a 30% reduction in infrastructure costs and increased service resiliency and fault isolation.
- Implemented PCI-DSS compliant card tokenization and integrated 3DS 2.0 authentication protocols to enhance transaction security and reduce chargebacks by 12%, ensuring adherence to industry security standards.
- Spearheaded front-end modernization for Paytm Money platform, migrating from legacy AngularJS to React, improving application performance metrics and boosting Lighthouse score from 45 to over 80, enhancing overall user experience and SEO.
- Collaborated within Agile teams, conducting code reviews, writing unit and integration tests using JUnit and Mockito, and employing CI/CD pipelines to automate deployments and improve release velocity.
- Participated actively in sprint planning, backlog grooming, and daily stand-ups, promoting best practices in code quality, documentation, and continuous improvement.

EDUCATION

Santa Clara University | Santa Clara, USA Sep 2022 - June 2024

Master of Science in Computer Science and Engineering

MIT College of Engineering | Pune, INDIA June 2015 - May 2019 Bachelor

of Information Technology

SKILLS

Languages & Frameworks: Java 8/11/17, Spring Boot, React.js, Redux, TypeScript, Microservices, REST

APIs Cloud & DevOps: AWS (EC2, Lambda, S3), Kubernetes, Docker, CI/CD (Jenkins, GitHub Actions)

Databases: PostgreSQL, MongoDB, Redis

Messaging & Streaming: Kafka, Web Sockets

Testing & Observability: JUnit, Prometheus, Grafana

Domain Specialization: Payments (PCI-DSS), Geospatial Systems, Semiconductor Tools

Methodologies: Agile, TDD, Performance Optimization
