

SUMMARY

- Full Stack Developer with 3+ years of experience in Python and Java (backend: Spring Boot) and React.js with TypeScript (frontend). I am skilled in MySQL, PostgreSQL, MongoDB, AWS, and Azure, with expertise in Docker, Kubernetes, and Agile methodologies for delivering scalable software solutions.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python
- **Web Technologies:** HTML, CSS, JavaScript, TypeScript, Bootstrap, jQuery, Ajax, JSON, XML
- **Frameworks:** Spring MVC, Spring Boot, Spring Security, Microservices, Hibernate, Angular, Node.js, React.js
- **API Development:** RESTful APIs (Using swagger and postman), SOAP-based Web Services (JAX-WS)
- **J2EE Technologies:** Servlets, JSP, JSTL, JavaBeans, JDBC
- **Databases:** MySQL, MS SQL Server, PostgreSQL, MongoDB, Oracle DB, NoSQL (non-relational database)
- **Cloud/Deployment:** AWS, Azure, GCP, Docker, Kubernetes
- **Version Control:** Git, GitHub, Bitbucket
- **QA tools:** Jest, Cypress, React Testing Library (for testing front-end).
- **Other Tools:** Maven, Gradle, Jira, Jenkins, JUnit, Mockito, Elasticsearch, JMeter, SVN, Jasmine, SoapUI, cucumber

PROFESSIONAL EXPERIENCE**Google, TX | Software Engineer****Oct 2024 – Present**

- Automated data workflows by integrating Google Sheets API with Python and TypeScript, enhancing efficiency by 30% and enabling type-safe client-server interactions.
- Built TypeScript and Python prototypes for Gemini AI, enhancing NLP tasks like summarization and conversational interfaces.
- Optimized data handling with TypeScript and Python, ensuring seamless integration between Google Sheets, APIs, and the UI for improved performance.

Albertsons, TX | Software Engineer**July 2023 – Sept 2024**

- Developed and maintained a high-traffic eCommerce backend using Java, Spring Boot, and Kafka, creating scalable APIs and enabling real-time, event-driven microservices for high-volume transactions.
- Built a dynamic and responsive front-end for the eCommerce platform using **React.js** and **TypeScript**, improving user experience and performance.
- Designed and optimized **MySQL** databases for storing and querying eCommerce product catalogs, orders, and customer data, ensuring high performance and data integrity.
- **Debug critical workflows** like checkout by replicating issues, analyzing logs, and using tools like breakpoints to quickly identify and fix the root cause.
- Developed a cost-efficient, scalable platform using **AWS** services (EC2, S3, RDS) for hosting and Amazon Postgres **DynamoDB** for low-latency, real-time inventory and order management, ensuring high availability.
- Containerized the eCommerce application using **Docker** and implemented automated CI/CD pipelines with **Kubernetes**, ensuring consistent environments across development, testing, and production, while streamlining deployment and scaling of **microservices**. **JSON** helps in **storing, sending, and receiving data easily**.

Tata Consultancy Services, India | Software Engineer**Sep 2020 - Aug 2022**

- Developed secure, high-performance banking applications on **Apache Tomcat** using **Core Java** and **Java 8** features, including Functional Interfaces, Lambda Expressions, Stream API, and Collectors, with **Spring MVC** to build scalable, maintainable web applications, while adhering to SOLID principles.
- Built dynamic front-end interfaces for banking solutions using **Node.js** and **JavaScript**, ensuring smooth user interactions and real-time data updates.
- Deployed and scaled banking applications on **Azure** and Managed huge data on **Google Cloud**, leveraging cloud services for high availability, security, and optimized infrastructure management.
- Designed and optimized **SQL** databases for transactional banking data, while leveraging non-relational databases (**MongoDB**) for storing unstructured or semi-structured data.
- Used **GitHub** for version control, ensuring efficient collaboration, code reviews, and management across development teams.
- Implemented CI/CD pipelines using **Jenkins**, GitLab CI, and Docker, automating code deployment and reducing deployment time by 40%, while ensuring high availability and scalability in production environments.
- Developed unit tests using **JUnit** for backend code quality and utilized **JMeter** for performance testing, ensuring the banking platform met reliability and scalability standards.
- Integrated **Splunk** and **Grafana** to monitor transaction processing systems, ensuring real-time performance insights and early detection of anomalies in high-availability banking applications.
- Optimized performance and incident management using **Splunk**, **AppDynamics**, and **ServiceNow**, improving reliability by 80%

EDUCATION:

Master of Computer Science in Texas A&M -Commerce | CGPA 3.1

May 2024
