

LILIANE NAOMIE SIKADIE

Denton, TX - (940)354-5844 - snaomie913@gmail.com - www.linkedin.com/in/naomie-l-s-8a90a7277

PROFESSIONAL SUMMARY: A Results-driven Software Engineer with over 3 years of experience in designing, implementing, and managing cloud solutions for organizations. Seeking a challenging position to leverage my expertise in cloud architecture, automation, and DevOps practices to contribute to the success of a forward-thinking company.

TECHNICAL SKILLS

Overview: Able to develop and deploy efficient and reliable software, troubleshoot and support operating systems and applications, as well as manage and troubleshoot network connections and wireless networks. Technical skills include:

- **Cloud Platforms:** AWS, Azure, GCP
 - **AWS** - Launching, resizing, managing and monitoring an Amazon EC2 instance, Create security groups, Configure routing tables, Launch EC2 instance, Launch NAT Gateway to connect my resources in my private subnet. Create Auto-scaling, Launch Templates, Auto-scaling groups, Elastic Load Balancer with, AWS CLI, Identity and Access Management, Using AWS VPC peering and Transit Gateway, Familiar with CloudFormation, writing infrastructure as code using YAML, Writing policies in JSON, Create S3 Buckets, Writing lambda functions with python
 - **Linux** - Familiar with CLI (Bash shell, Python, AWS), Familiarity with text editor (Vim, Nano), Experience creating users and groups, Experience managing log files, Experience troubleshooting network connectivity using ping and nslookup, also file transfer with scp command, Managing file permissions and user passwords, Automation of auditing commands, Experience with ssh, Update configuration files, Managing processes, Compressing and unzipping files using tar command, Copying, moving and deleting files
 - **Network Security** - Hashing, PKI configuration, Security groups, Network Hardening, IDS/IPS intrusion detection and prevention systems, Implement data encryption (86), Use integrity controls (86), Security Lifecycle, Penetration Testing, Threat Mitigation.
 - **Database** - Import data, data manipulation (select,insert,delete,update), Amazon Relational Database, Amazon DynamoDB, Amazon Redshift, MongoDB, MySQL, Microsoft Management studio, Database migration to Amazon RDS, Connected Amazon RDS database with Amazon EC2 server, Querying data across tables (inner, left, right joins, Performing data transactions, PostgreSQL, RedShift, Data collection (data integrity)
 - **DevOps Tools** - Familiar with CI/CD tools (e.g. Jenkins, Git, Docker); Kubernetes, Sonarqube, Nexus, Tomcat, Github, Prometheus, Git actions, AWS, Linux, Python, Ansible, Helm, and Azure. Setting up servers in AWS (EC2 and S3) and troubleshooting applications, building images and running containers using Docker.
-

PROFESSIONAL EXPERIENCE

NEXTGEN TECHNOLOGY SOLUTION, Remote

Aug 2022 - Nov 2024

Cloud/DevOps Engineer Apprenticeship

- Configured and integrated CI/CD tools (e.g., Jenkins, GitLab, CI/CD) to enable automated builds, tests, and deployments.
- Assisted developers and operations team in order to build strong and reliable infrastructure; great with working in teams to accomplish tasks
- Architected, implemented, and maintained AWS (Amazon Web Services) cloud infrastructure for multiple clients, ensuring high availability, security, and scalability.
- Containerized applications using technologies like Docker, and managed container orchestration using platforms like Kubernetes; while ensuring scalability, availability, and security. Implemented best security practices for infrastructure and applications, including secure network configurations, access controls, and data encryption
- Resolved and troubleshooted infrastructure and deployment issues, ensuring system availability and reliability.

- Designed and implemented resilient and fault tolerant systems leveraging AWS services like Auto Scaling, Elastic Load Balancers, and AWS Lambda.

ALBERTSONS, Remote

Jun 2021 - Aug 2022

Cloud Support Internship

- Troubleshooting Issues: Assist customers or internal teams by diagnosing and resolving cloud-related problems like server downtimes, connectivity, or configuration errors.
- System Monitoring: Use monitoring tools to track cloud service performance, identify bottlenecks, and report anomalies.
- Documentation: Create or update technical guides, FAQs, and user documentation for cloud services or solutions.
- Testing and Validation: Help test new features, deployments, or updates to ensure they work as expected in the cloud environment.

EDUCATION

North Central Texas College, Corinth, TX.

Dec 2024

Associates of Arts - Software Engineering.

Per Scholas - AWS/Restart - Remote

May 2023

Computer Technician Training of 450+ hours - A comprehensive I.T. curriculum, incorporating a unique blend of formal instruction and hands-on activities, in a real-world working environment. Obtained profound understanding of Cloud Security while configuring personal networks in AWS; using VPCs.

NewEra Solutions Bootcamp - DevOps Training - Remote

Jan 2023

A 6 months DevOps Engineering Training - A comprehensive, in-depth, and on hands training on Developing and Operating Software. Using tools such as Docker, Jenkins, Github to build, develop, and manage software applications.
