Skills

Languages: Java | C# | C++ | C | Python | JavaScript | TypeScript | HTML | CSS | SQL

Technologies: Linux | Docker | AWS | Git | GoogleTest | VIM

Education

Honors Bachelor of Science (H.B.S.) in Computer Science

University of Utah

Minor in Mathematics and Spanish

Master of Science (M.S.) in Management and Leadership

Western Governor's University

Experiences

Senior Associate Software Engineer, L3 Harris

June 2023 - Present

- Coding primarily in C++.
- Built automated Docker containers to launch large-scale applications.
- Conducted research and implemented code on IRAD projects.
- Integrated unit test with Jenkins builds to confirm functionality of new or updated software.
- Performed code reviews to ensure code adheres to standards set by the organization.
- Enhanced existing applications by implementing new features utilizing Agile Development Process.

Software Engineer Intern, L3Harris

Summer 2022

- Used Virtual Machines and GIT versioning to work on a radio system.
- Developed additional software states with protobuf messages for a radio communication controller to allow for more user functionality.

Software Engineer Intern, L3Harris

Summer 2021

- Created additional GoogleTest unit test framework for my software team.
- Updated a navigation system to account for roll, pitch, and yaw throughout an internal simulation of a plane with a satellite.

Project

MyRate

May 2023

- Website application hosted on AWS that allowed users to rate multiple forms of media (Books, Movies, and TV Shows) in one succinct easy-to-use way.
- Utilized the MERN (MongoDB, Express, React, NodeJS) stack to implement CRUD operations and maintain continuity of website, all managed by the AGILE Development process.
- Utilized multiple API calls to populate the MongoDB database and present user data in interactive visualization charts.
