## EDUCATION

---

### Master of Science in Business Analytics (STEM-Certified Program)

Dec 2025

Simon Business School, University of Rochester

- Simon Product Management Club, *Vice President*
- Coursework: Applied Product Management, Data Warehousing, Analytical Design, AI & Business, Prescriptive Analytics

### Bachelor of Commerce

September 2023

Rani Channamma University

- Student Advisory Council, *President*

## PROJECTS

---

### Customer Segmentation & Purchase Analytics Using Tableau & Python

- Raw purchase records contained inconsistencies that limited their usability; I applied PCA and K-Means clustering on 3,900+ transactions to detect patterns, reconcile data, and identify four reliable customer segments for improved performance monitoring.
- Business teams lacked structured insights into consumption trends; I built an interactive Tableau dashboard with dynamic filters and seasonal views, transforming unstructured data into accurate KPIs that improved real-time reporting and decision-making.

### AI-Driven Inventory Optimization for University Dining

- Dining operations suffered from recurring inefficiencies and error-prone ordering; I led a 5-member team to design predictive models and automate monitoring dashboards, projecting a 20–30% reduction in waste, 40% fewer manual errors, and improved system accuracy.
- Limited visibility prevented early detection of discrepancies; I implemented real-time dashboards with automated low-stock alerts, flagging anomalies before they escalated and converting raw data streams into reliable KPIs for proactive decision-making.

### Healthcare Analytics – Time-Series Modeling for Clinical Decision Support

- ICU environments required continuous monitoring of high-volume patient data; I processed 100K+ rows of time-series vitals and built visualizations that highlighted anomalies early, ensuring accurate trend detection and dependable reporting.
- Manual oversight delayed responses to critical risks; I designed automated alert logic (e.g., HR > 120 bpm) to flag irregularities, a framework transferable to detecting discrepancies in financial datasets and improving overall data reliability.

## EXPERIENTIAL LEARNING – CASE COMPETITIONS

---

### VinFast Go-to-Market & Market Prioritization Strategy (EU vs US)

- VinFast faced uncertainty in prioritizing U.S. vs. EU expansion; I conducted SWOT, STP, and financial modeling to evaluate both markets, recommending an EU-first entry projected to yield 17% higher profitability over five years.
- Leadership required a clear roadmap for execution; I developed a phased go-to-market plan integrating lean manufacturing, premium positioning, and localized strategies, aligning the global growth roadmap with measurable market adoption goals.

### AI-Powered GTM Strategy for Urban Water Systems

- Built predictive maintenance dashboard using IoT and AI, reducing projected water waste by 30% and creating a scalable framework for infrastructure rollout.

## PROFESSIONAL EXPERIENCE

---

### Research Analyst Intern | Bynaric Systems Private Limited

November 2021 - February 2022

- Conducted in-depth research on financial literacy topics for children aged 10–16, translating complex concepts into clear, actionable insights demonstrating strong analytical and communication skills.
- Collaborated with cross-functional teams to compile findings into structured documents, enabling the creation of engaging, educational content reflecting ability to turn data into effective outputs.

### Community Marketing Intern | Ischoolconnect Technologies Pvt Ltd

August 2021 - February 2022

- Led outreach initiatives with universities and influencers across the USA, UK, and Germany, securing 9 successful partnerships showcasing stakeholder engagement and project coordination skills.
- Built and maintained Power BI dashboards tracking outreach progress by region, improving reporting accuracy and enabling data-driven decision-making directly relevant to analytics work like CareFlow's dashboards.

## SKILLS

---

- Python, SQL, PowerBI, Tableau, MS Office Suite, A/B Testing & Experimentation, Healthcare data workflows, Predictive analytics, AI & GPT Integration for Scalable Automation, Product Strategy & 0→1 Execution, Cross-Functional Collaboration
