

JAHNAVI PINNAMANENI

Health Informatics Analyst

Clinical & Pharmacy Data • Quality Reporting • Population Health Analytics

Hicksville, NY 11801

jahnavipinnamaneni28@gmail.com | (929) 642-6034

PROFESSIONAL SUMMARY

Health Informatics Analyst with 5+ years of experience applying analytics within clinical, pharmacy, and regulated healthcare environments. Proven ability to analyze EHR-adjacent clinical and prescription data, improve data quality, and support medication safety, quality reporting, and population health initiatives. Strong background in SQL, Tableau, Power BI, and healthcare data governance, with hands-on experience collaborating with clinicians, pharmacy teams, and quality stakeholders. Master's-trained in Health Informatics with a solid foundation in clinical workflows, compliance, and informatics-driven decision support.

SKILLS

- **Health Informatics & Clinical Systems:** Clinical workflow analysis, pharmacy & medication utilization analytics, healthcare quality & compliance reporting, population health concepts, data governance & integrity, EHR adjacent clinical and claims data
- **Analytics & Programming:** SQL, Python (Basic Exposure), Tableau, Power BI, Excel (Pivot Tables, Macros)
- **Data Engineering & Processing:** ETL pipelines, data validation & cleansing, metadata management, data standardization, data quality frameworks
- **Project & Delivery Methodologies:** Agile/Scrum, Jira, cross functional collaboration, requirements gathering & documentation

EXPERIENCE

Elevance Health

Feb 2025 -Present

Health Informatics Analyst (Data Analyst)

Irving, TX

- Analyzed clinical utilization and prescription datasets supporting medication management workflows across 15+ outpatient clinics, improving medication visibility for clinical and pharmacy teams.
- Automated clinical data quality validation checks using SQL and Python, reducing manual review effort by 30% and improving reporting accuracy.
- Developed Tableau dashboards tracking prescribing patterns and utilization trends, contributing to a 12% reduction in inappropriate medication use.
- Conducted exploratory analysis on pharmacy claims and clinical datasets, identifying anomalies that improved compliance and quality reporting accuracy by 20%.
- Supported root cause analysis for data discrepancies, resolving 90% of identified issues within SLA timelines.

- Documented clinical data workflows, validation rules, and quality procedures, reducing analyst onboarding time by 15%.
- Collaborated with pharmacy operations, quality, and informatics stakeholders to align reporting outputs with regulatory and clinical requirements.

Sterling Universal Group

Sep 2023 – Jan 2025

Health Informatics Intern

Hicksville, NY

- Automated healthcare data validation processes using SQL and Python, reducing manual effort by 50% and improving data reliability.
- Forecasted prescription demand trends using historical data and statistical models, improving inventory planning accuracy by 20%.
- Implemented AI-driven anomaly detection for real-time prescription data, improving processing efficiency by 40%.
- Built interactive Tableau dashboards monitoring medication utilization, contributing to a 30% reduction in off-label prescription patterns.
- Strengthened data lineage and governance practices, improving data accuracy and traceability by 25%.
- Conducted root cause analysis on data inconsistencies, resolving 95% of issues within SLA timelines.
- Managed informatics project tasks in Jira, improving sprint delivery efficiency by 20%.

Pristen IT

Nov 2021 – Jul 2022

Data Analyst

Hyderabad, India

- Reduced data quality issues by 40% through automated data cleansing, validation frameworks, and metadata management.
- Increased data accuracy by 50% by redesigning validation rules supporting downstream reporting pipelines.
- Conducted end-to-end analysis on large datasets to identify inconsistencies and optimize data workflows.
- Automated reconciliation processes, improving audit accuracy by 30% and reducing manual effort.
- Developed Tableau and Excel dashboards providing real-time visibility into data quality and operational metrics.
- Translated business requirements into technical specifications to support analytics and informatics solutions.

Divis Laboratories

Oct 2020 – Sep 2021

Quality Assurance Supervisor

Hyderabad, India

- Oversaw quality operations in a GMP-regulated pharmaceutical environment, ensuring strict adherence to

SOPs and regulatory standards.

- Performed in-process checks and final inspections, reducing batch deviations by 18% through improved documentation accuracy.
- Led root cause investigations and implemented CAPA actions, reducing recurring quality issues by 25%.
- Monitored critical quality parameters across production lines, reducing rework by 15%.
- Trained staff on GMP, data integrity, and safety protocols, reducing documentation errors by 20%.
- Maintained audit-ready documentation, contributing to zero major audit observations.

ACADEMIC PROJECTS

Hofstra University

Dec - 2023

Tableau Dashboard for the Cancer Drugs

Hempstead, NY

- Analyzed and visualized cancer drug data, creating an interactive Tableau dashboard to track patient impact across different cancer types.
- Processed and cleaned 100,000+ patient records, ensuring data accuracy and consistency for clinical trial comparisons.
- Reduced data retrieval time by 30% by optimizing queries and structuring the dashboard for real-time updates.
- Compared clinical trial results, adverse reactions, and dosage administration of the top 10 cancer treatment drugs, providing actionable insights for healthcare professionals.
- Enhanced data-driven decision-making by integrating advanced visualizations that highlight treatment efficacy and patient outcomes.
- Improved report generation efficiency by 40%, enabling faster analysis for medical researchers

PUBLICATIONS

"Litchi Chinensis as a Functional Source Of Phytochemical Naturally Dynamic Constituents In Various Pieces Of Lychee: A Run Down And Description Of Pharmacological Activities Including Hypoglycemic Encephalopathy And Review Of Patents"
[<https://www.wjpr.net/> Volume 9, Issue 4, 385 402.]

Description: In spite of the fact that writing exhibits the natural movement of Litchi segments in diminishing tumor cell suitability in vitro or in vivo models, information about the biochemical systems answerable for these impacts are very fragmentary. This audit specifically portrays, in a far-reaching examination, the antitumor properties of the various pieces of Litchi and features the principle biochemical instruments involved. Though it contains numerous valuable properties, it is unsafe to under sustained youngsters which causes hypoglycemic encephalopathy which is talked about beneath

EDUCATION

Hofstra University

Dec 2024

Masters in Health Informatics

Hempstead, NY

CGPA:3.85
