Phone: +1 469-929-3528

<https://www.linkedin.com/in/varaprasad39mm8190/>

PROFESSIONAL SUMMARY:

Java Full Stack Developer with 5+ years of experience in designing, developing, and deploying enterprise-scale, cloud-native, and microservices-based applications for LabCorp and Mastercard.

Expertise in Java, Spring Boot, Spring Cloud, and RESTful APIs, delivering scalable and high-performance solutions in healthcare and finance.

Proficient in microservices architecture, ensuring modularity, scalability, and fault tolerance with Spring Boot and Spring Cloud.

Developed and secured RESTful APIs using OAuth2, JWT, and RBAC, implementing Spring Security for robust authentication and authorization.

Experienced in AWS cloud computing, managing Lambda, API Gateway, S3, RDS, and IAM, while deploying resources with Terraform and AWS CloudFormation.

Built and automated CI/CD pipelines using Jenkins, GitLab, Docker, and Kubernetes, enabling seamless integration, testing, and deployment.

Skilled in frontend development, building dynamic and responsive UIs with ReactJS, Angular 8, JavaScript, and Redux for an enhanced user experience.

Designed and optimized SQL (PostgreSQL, MySQL) and NoSQL (MongoDB, DynamoDB) databases, ensuring data integrity and query performance.

Implemented event-driven architectures using Apache Kafka and AWS Kinesis, enabling real-time data processing and streaming.

Developed serverless architectures with AWS Lambda and API Gateway, reducing infrastructure overhead while improving cost efficiency and scalability.

Configured API Gateways for rate limiting, throttling, and OAuth2 authentication, enhancing security and access control.

Managed high-volume data processing with Spring Batch, ensuring fault tolerance and efficient resource utilization.

Monitored and optimized application performance using AWS CloudWatch, Dynatrace, and SonarQube, implementing alerts and dashboards for proactive issue resolution.

Built real-time messaging systems with AWS SNS, SQS, and Apache Kafka, enabling asynchronous microservices communication.

Followed Agile methodologies (SCRUM), actively participating in daily stand-ups, sprint planning, and retrospectives to align with business goals.

Created and maintained technical documentation using Swagger/

OpenAPI

, Confluence, and TDD, ensuring seamless development and operational integration.

Optimized backend performance using multi-threading, caching strategies, and parallel processing, reducing API response times.

Implemented Infrastructure as Code (

IaC

) using Terraform, ensuring scalable and reusable cloud resource management.

Applied best security practices with AWS IAM, API Gateway security policies, and OAuth2, ensuring compliance with HIPAA and PCI-DSS.

Conducted load testing and performance tuning using Apache JMeter, identifying and resolving system bottlenecks under high-traffic conditions.

Managed version control with Git, GitLab, and GitHub, enforcing branching strategies, code reviews, and best practices.

Resolved production incidents and system failures by monitoring PagerDuty alerts and leveraging observability tools to minimize downtime.

Mentored junior developers, providing code reviews, pair programming, and guidance on best practices and design patterns.

Passionate about continuous learning, staying updated on Java, Spring Boot, AWS, and DevOps to drive innovation and efficiency.

TECHNICAL SKILLS:

Languages	Java 8/11, SQL, PL/SQL
Frontend Technologies	ReactJS, Angular 8, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, JSP
Backend & J2EE Technologies	Java Beans, Servlets, JSP, JDBC, Multi-Threading, RESTful APIs, SOAP, GraphQL
Frameworks & Libraries	Spring Boot, Spring Cloud, Spring MVC, Spring Batch, Spring Security, Hibernate, JPA, Struts
Microservices & Messaging	Spring Boot Microservices, Apache Kafka, AWS SNS, AWS SQS, Spring Cloud Stream
Databases	PostgreSQL, MySQL, MongoDB, DynamoDB
Cloud Platforms & DevOps	AWS (Lambda, API Gateway, S3, RDS, IAM, CloudWatch), Terraform, Pivotal Cloud Foundry (PCF), Jenkins, GitLab CI/CD

Containerization & Virtualization	Docker, Kubernetes
Web & Application Servers	Apache Tomcat, JBoss, IBM WebSphere
CI/CD & Automation	Jenkins, GitLab CI/CD, AWS Code Pipeline, Terraform
Version Control & Configuration Management	Git, GitLab, GitHub, Bitbucket, SVN, Ansible, Terraform
Testing & Performance Optimization	JUnit, Mockito, Cucumber, Apache JMeter, SonarQube
Monitoring & Logging	AWS CloudWatch, Dynatrace, ELK Stack (Elasticsearch, Logstash, Kibana)
IDEs & Development Tools	IntelliJ IDEA, Eclipse, Visual Studio Code
Operating Systems	Windows, Linux (Ubuntu, Red Hat)

Education:

Master’s in Data Science

– University of Wisconsin-Milwaukee

Bachelor’s

in Electronics and Communication Engineering

– Lovely Professional University

, India

PROFESSIONAL EXPERIENCE:

Client: LabCorp - Burlington, NC Java Full Stack Developer May2024 – Till date

Roles &Responsibilities:

Developed and maintained Java applications using Spring Boot, Hibernate, and JPA, ensuring clean, modular, and scalable code that met performance standards and industry best practices.

Designed and implemented RESTful APIs with Spring Boot, integrating OAuth2 and JWT authentication to ensure secure and efficient data exchange.

Managed and deployed cloud-native applications on AWS, leveraging Lambda, S3, RDS (PostgreSQL), and API Gateway for high availability and security.

Automated CI/CD pipelines using Jenkins, GitLab, and Docker, reducing manual effort and deployment times.

Conducted unit and integration testing using JUnit and Mockito, ensuring code reliability and performance.

Implemented Spring Security with JWT tokens and role-based access control (RBAC) to secure RESTful services.

Orchestrated containerized microservices using Kubernetes, managing deployments, scaling, and fault tolerance.

Followed Agile methodologies, using JIRA for task tracking and Confluence for documentation.

Implemented Infrastructure as Code (

IaC

) using Terraform, automating AWS resource management.

Built and optimized ReactJS front-end applications, implementing Redux state management and reusable UI components for a seamless user experience.

Designed and managed API Gateways, enforcing rate limiting, throttling, and OAuth2 authentication for secure microservices access.

Utilized AWS SNS and SQS for reliable messaging patterns, enabling asynchronous communication and improved system scalability.

Developed real-time data processing pipelines using Apache Kafka and AWS Kinesis, optimizing streaming data analytics.

Created and maintained technical documentation for APIs, database schemas, and deployment pipelines, ensuring clarity for development and operations teams.

Implemented serverless architectures using AWS Lambda and API Gateway, reducing infrastructure management overhead.

Configured AWS CloudWatch and Dynatrace for proactive application monitoring, setting up alerts and dashboards to detect and resolve performance bottlenecks.

Conducted performance testing with Apache JMeter, optimizing applications to handle peak traffic loads efficiently.

Utilized Spring Cloud for service discovery, load balancing, and centralized configuration, simplifying microservices communication.

Participated in sprint reviews and retrospectives, gathering feedback and identifying actionable improvements for continuous development enhancements.

Environment: Java, Spring Boot, RESTful APIs, OAuth2, JWT, ReactJS, Redux, JavaScript, PostgreSQL, MongoDB, DynamoDB, AWS (Lambda, API Gateway, S3,

RDS), Docker, Kubernetes, Terraform, Jenkins, Spring Security, AWS CloudWatch, SonarQube, Apache Kafka, AWS SNS, AWS SQS,

JUnit, Mockito, Cucumber, Apache JMeter, Agile (SCRUM), CI/CD, JIRA, Confluence.

Company: Fulcrum Digital

Client: Mastercard Java Developer May 2019-Aug 2023

Roles & Responsibilities:

Designed and developed the "Pay by Account (PBA)" payment application at Mastercard, ensuring compliance with industry standards and best practices.

Analyzed client requirements, designed scalable solutions, and participated in all phases of the SDLC, including development, testing, deployment, and support, focusing on MVC architecture and REST APIs.

Designed and implemented CI/CD pipelines using Jenkins and Git, automating build, test, and deployment processes, reducing manual effort and improving reliability.

Developed and optimized RESTful web services using Spring Boot, integrating OAuth2 and JWT-based authentication for secure access control and data exchange.

Built modular front-end applications using Angular 8, utilizing HTTP Client for CRUD operations, improving user experience and performance.

Developed responsive web interfaces with Angular, jQuery, and Bootstrap, ensuring cross-device compatibility and enhanced UI/UX.

Designed and developed microservices using Spring Boot, enabling scalability and maintainability, utilizing Spring Cloud for service discovery, load balancing, and centralized configuration.

Utilized Java 8 features such as Streams API, Lambda Expressions, and Functional Interfaces to optimize data processing and improve efficiency.

Applied Spring Core, IoC, AOP, ORM, and Eureka, integrating Spring Security for role-based access control (RBAC) and API security.

Designed and optimized MySQL database schemas, including tables, views, indexes, and triggers, improving data retrieval speeds and transaction integrity.

Developed real-time data processing pipelines using Apache Kafka, enabling efficient streaming data handling and event-driven microservices.

Created and executed JUnit test cases for unit testing, ensuring code reliability and maintainability.

Configured API Gateway for centralized API management, implementing rate limiting, throttling, and OAuth2 authentication to protect APIs from misuse.

Monitored application performance using AWS CloudWatch, setting up alerts and dashboards to proactively identify and resolve bottlenecks.

Utilized Spring Batch for large-scale data processing, ensuring resource efficiency and fault tolerance.

Followed Agile methodologies, actively participating in daily stand-ups, sprint planning, reviews, and retrospectives, improving team collaboration and iterative development.

Created and maintained API documentation using Swagger/

OpenAPI

, ensuring clarity in API usage and seamless integration for developers.

Managed version control using Git, following best practices for branching, merging, and pull requests to maintain a clean and structured codebase.

Participated in backlog grooming and sprint planning, refining user stories, estimating efforts, and prioritizing tasks for timely feature delivery.

Environment: Java, Spring Boot, Spring Cloud, Microservices, RESTful Web Services, Struts Framework, MVC, Angular 8, JSP, HTML, CSS, JavaScript, jQuery,

Bootstrap, MySQL, Jenkins, Git, AWS (Lambda, API Gateway, CloudWatch), Spring Security, OAuth2, JWT, Apache Kafka, JUnit, TDD (Technical

Design Document), Swagger/OpenAPI, Rational Rose, Agile (SCRUM), CI/CD, JIRA, Confluence.

Projects and Workshops

Analysis of Road Accidents for Road Safety (Sep 2023- dec 2023)

Analyzed and interpreted Chicago traffic crash data from data.gov using Power BI to derive meaningful insights.

Identified key performance metrics to enhance data-driven decision-making processes for road safety improvements

.
