EDUCATION

University of Minnesota-Duluth

Aug 2021 - May 2023

Masters of Computer Science

R.V.R & J.C College of Engineering

Aug 2013 - Apr 2017

Bachelor of Technology in Computer Science and Engineering

EXPERIENCE SUMMARY

- 5+ years of experience in Software Analysis, Design, Development, Implementation and Testing of Object-Oriented Applications and Web based Enterprise Applications using Java/J2EE.
- Hands-on experiences with Core Java with Multithreading, Concurrency, File Handling I/O, Generics, Data Structures and Collections, Garbage Collection.
- Proficient in cloud computing services, specifically AWS (Amazon Web Services) and GCP (Google Cloud Platform), including expertise in Compute Engine, Google Kubernetes Engine, and BigQuery. Skilled in developing CI/CD pipelines within agile frameworks and knowledgeable in the implementation of APIGEE gateway.
- Experience in Java 1.8 features like Parallel Streams, Lambdas, functional interfaces, and filters.
- Experience in designing and developing Frontend using JSP, HTML5, CSS3, JavaScript, Ajax, jQuery, AngularJS, Angular 2/4/6/8/9, Node.js, ReactJS, Typescript, Bootstrap, XML, Json.
- Experience in Java Technologies using Core Java, Java Beans, J2EE (JSP, Servlets), EJB, JMS, JNDI, JSF, Struts, Spring, Hibernate, JDBC, XML, Web Services and Design Patterns.
- Hands-on Experience in using different Spring modules like Spring Core, Spring MVC, Spring Boot, Spring AOP, Spring Cloud, Spring Security, Spring Data and Spring ORM.
- Hands-on experience in Microservices, Spring Boot with the cloud technologies such as Pivotal Cloud Foundry (PCF) etc.
- Possess extensive experience and expertise in the GCP(Google Cloud Platform) environment, with a strong focus on leveraging key services such as Google BigQuery, Google Pub/Sub, Google Spanner, Dataflow, Compute Engine, and Google Storage for optimal cloud solution implementation and data management.
- Proficient in deploying and managing Java applications on Google Cloud Platform (GCP), specializing in Compute Engine and Kubernetes Engine. Demonstrated expertise in containerization and orchestration, ensuring scalable and efficient application deployment.
- Skilled in integrating Apache Kafka with Google BigQuery for advanced data streaming and analytics within Java applications. Expertise in handling real-time data processing, contributing to the development of high-performance, data-driven applications.
- Experienced in developing Restful Services using JAX-RS specification like Jersey and Rest Easy to implement REST based Application.
- Expertise in implementing Service Oriented Architectures (SOA) using XML based Web Service such as SOAP, UDDI and WSDL.
- Experience in development and deployment of applications using JBoss, Web Logic Application Server, IBM WebSphere Application and Apache Tomcat.
- Expertise in developing applications with React-JS implementing Redux Patterns.
- Designed and implemented Single Page Application with React-JS and Spring Framework using Agile Methodology.
- Experience in developing applications with use of different Architectures and Frameworks like Model View Controller (MVC), Data Access Object (DAO), Data Transfer Object and POJO.
- Good experience on Design Patterns (J2EE) like Singleton, Factory, DAO, Session Facade, Front Controller, and Delegate Pattern.
- Experience on various IDEs like Eclipse, Spring Tool suite, Net Beans, IntelliJ, and Visual Studio Code (VSC).
- Experience in working with relational databases like SQL, MySQL, Oracle, PostgreSQL for Queries, Stored procedures, and transactions.
- Experience on NoSQL databases like MongoDB, Cassandra.
- Experience in AWS cloud tools like EC2, S3, VPC, RDS, Elastics Search, Route53, EBS, ELB, Cloud Formation, Cloud Watch, Auto Scaling.
- Experience in using Swagger to interact with API endpoints of microservices.
- Expertise in DevOps, Release Engineering, CI/CD by using various tools like Jenkins, Docker, Bitbucket, Terraform, Chef, Ansible, Docker, ELK, Kubernetes, Nagios.
- Proficient in utilizing GitHub for comprehensive version control and continuous integration, adept in managing source code through branching, merging, and pull requests, and automating build and testing processes to streamline Java development workflows and

enhance code quality.

- Demonstrated expertise in employing TDD for robust and reliable coding, and adept in various design patterns including Singleton, Factory, Observer, and Strategy, enhancing code efficiency, scalability, and maintainability.
- Expertise on implementations of Java Message Service (JMS) by using ActiveMQ, Rabbit MQ, Kafka.
- Proficient in authentication and authorization with Spring Security in the mode of LDAP, OAuth2, SAML, Web Application Security, JWT (JSON Web Token).
- Good experience to set up, configure continuous build processes using Maven, Ant, Gradle.
- Hands-on experience in code review tools like SonarQube, PMD, Find Bugs.
- Experience in developing test cases using JUnit, MOCKITO for Unit testing, and logging using Log4j.
- Experience in using bug/issue tracking, project Tracking and Management tool JIRA.
- Experience in using various testing tools like Junit, Jasmine, Karma, Protractor, Cucumber, Postman, Selenium, TestNG.
- Experience in using version control and configuration management tools like GIT, SVN and CVS.
- Experience in multiple operating systems including Linux, UNIX, Sun Solaris, and Windows.
- Experience in working on Software Development Life Cycle (SDLC) with a blend of proficiency and leadership in AGILE-SCRUM and Test-Driven Development (TDD), BDD.

TECHNICAL SKILLS

Languages	JAVA 1.8/8/11, Python, PL/SQL, UNIX, C, C++
Java/Web Technologies	JSP, Servlets, JNDI, JDBC, JMS, JPA, JSON, jQuery, Bootstrap, HTML5, DHTML, JavaScript, Angular JS, Angular 2/4/6/7/8/9, Vue.js, React.js, Redux, Flux, Node.js, AJAX, CSS3.
Xml Technologies	XML, XSL, XSLT, SAX, DOM, AXIS, Castor, XML Beans and JAXB
Web/App Servers	Apache Tomcat, Web Logic, Web Sphere, JBoss, IIS
IDEs	Eclipse, Net Beans, Red Hat Developer Studio, WSAD.
Messaging Services	Apache Kafka, Rabbit MQ, Active MQ, JMS, IBM MQ
Tools	TOAD, Ant, MAVEN, JUnit, JIRA, and Drools
Databases	RDBMS: Oracle, SQL, MySQL, DB2, NoSQL – MongoDB, Cassandra
Frameworks	Struts, Microservices, Spring (Spring MVC, Spring Core, Spring Context, Spring AOP, Spring DAO, Spring Security, Spring IOC, Spring JDBC, Spring Boot), Hibernate, JSF, JPA.
Version Control	Rational Clear Case, CVS, VSS, SVN, Git.
Methodologies	Waterfall, Agile and Scrum, TDD.
Services	SOA Architecture, RESTFUL/SOAP, Microservices, Axis 2, Apache CXF, Swagger
Cloud Technologies	Azure, PCF, AWS, GCP(Google Cloud Platform),Compute Engine, Big Query, Kubernetes Engine, CloudFront, EC2, S3, VPC, RDS, Auto Scaling, Cloud Watch, Aurora, Redis, Jenkins.
Operating Systems	Windows, UNIX, Linux, Sun Solaris
Authentication Protocols	OAuth2, OpenID Connect, SAML, OWASP
Security	OWASP Top Ten, Cross-Site Scripting (XSS), Cross-Site Request Forgery (CSRF), SQL Injection

WORK EXPERIENCE

Fidelity Investments
Senior Java Developer

Oct 2023 - Present

- Involved in various phases of Software Development Life Cycle (SDLC) such as requirements gathering, modeling, analysis, design, development, and testing.
- Followed Agile/Scrum methodology that included iterative application development, weekly Sprints, and stand-up meetings.
- Developed internal coding using J2EE technologies based on the MVC Architecture.
- Core Java with Concurrent API is used extensively for parallel processing and chunk processing of data and converted into JSON and stored in the NoSQL database MongoDB.
- Used Java 1.8 features like Lambda expressions and Stream API to support functional-style operations on streams of elements.
- Worked on the Spring framework like Spring IOC and Spring DAO.
- Developed UI using web technologies like JSP's, HTML5, CSS3, Bootstrap, AJAX, JavaScript, Typescript, and jQuery.
- Implemented Angular 9 custom services to implement dependency injection and used pipes to transformations.
- Developed http requests using Rxjs observables to communicate between server and client with Angular 9.
- Utilized Java 8 features such as lambda expressions, method references, and default interface methods for efficient backend development, enhancing application performance and maintainability.
- Used Spring Boot which is radically faster in building cloud Microservices and developing Spring based applications with very less configuration.
- Used JSF UI component to develop front-end web pages; have used faces-config.xml to manage faces servlet and managed beans.
- Experience in Normalization and performance tuning with Oracle DB.
- Developed Microservices & APIs using Spring Boot, Spring MVC and Spring Integration.
- Implemented authentication and authorization of the application using Spring Security and OAuth2.
- Implemented Apache Kafka producer and consumer for asynchronous stream processing, and search APIs using data indexing on the ElasticSearch.
- Used Splunk for Log monitoring in our application
- Build RESTful Web services using JAX-RS API.
- Implemented modules into Node.js to integrate with designs and requirements.
- Designed and implemented SAML-based Single Sign-On (SSO) solutions for multiple web applications, enabling seamless authentication with various identity providers.
- Integrated OAuth2-based authorization workflows for securing APIs and enabling fine-grained access control to resources.
- Designed and implemented OIDC-based Single Sign-On (SSO) solutions for web applications.
- Integrated OIDC authentication with OAuth2 to ensure secure user identity exchange.
- Collaborated with the development team to implement secure coding practices and integrate security into the SDLC.
- Configured and monitored web application firewalls (WAFs) and intrusion detection systems (IDS) to protect against attacks.
- Designed Frontend within object-oriented JavaScript Framework with Angular.js.
- Involved in consuming SOAP based web services so that the business application can integrate with legacy applications and facilitates future applications.
- Build and maintain code repositories and code migrations using CI/CD strategies (GIT, SVN, CSV, Jenkins).
- Deployed Code into Git environment and applied some hooks to automate the process of Continuous Integration and Continuous deployment (CI and CD).
- Designed and developed cloud-based solutions on Microsoft Azure platform using Azure PaaS and IaaS services.
- Designed and implemented Kubernetes-based solutions for containerized applications, ensuring scalability, high availability, and fault tolerance.
- Created Test automation framework using Cucumber and Selenium web driver.
- Implemented CI/CD pipelines for automated build, test, and deployment of Kubernetes applications using tools like Jenkins or GitLab CI.
- Proficient in building data pipelines, integrating data sources, and implementing data transformations using Azure Data Factory and Azure Databricks.
- Implemented CI/CD pipelines using Azure DevOps, enabling automated build, test, and deployment processes.
- Implemented SonarQube for continuous code quality analysis and tracking, significantly improving code maintainability and reducing technical debt.
- Developed and maintained multiple Vue.js-based web applications for clients in various industries.
- Implemented responsive UI components and optimized the applications for better performance.
- Collaborated with back-end developers and designers to deliver seamless user experiences.
- Used PL/SQL for views, indexes and stored procedures in oracle databases using TOAD and Query optimization.
- Responsible for React UI and architecture. Building components library, including Tree, Slide-View, and Table Grid.
- Involved in using React Components for UX-Library consisted of Button, Checkbox, Input, Icons, Toggle Button, Dropdown, Multi-Level Dropdown and many more.

- Implemented Node JS as a server-side proxy for observing various response times.
- Used ReactJS to create views to hook up models to the DOM and synchronize data with the server as a SPA.
- Used the Node Package Manager (NPM) to install libraries like angular-cli, typescript etc., which are required for developing an angular application in Node.
- Worked on Java functional programming concepts like Streams, Functional Interfaces, new date time API and lambda expressions.
- Extensively Used Jenkins as Continuous Integration tool to deploy Spring Boot Microservices to Pivotal Cloud Foundry (PCF) using build pack.
- Deploy Open stack environments through automated tools, Ansible / custom pipeline.
- Worked with OpenShift platform in managing Docker containers and Kubernetes Clusters.
- Worked in a highly dynamic AGILE environment and participated in scrum and sprint meetings.
- Explore single-page asynchronously data-driven UIs using REACT JS, REDUX and NODE JS.
- Changing the AWS infrastructure Elastic Beanstalk to Docker with Kubernetes.
- Involved in Logging and Monitoring with ELK, Kibana.
- Integrated Junit and SonarQube plugins in Jenkins for automated testing and for Code quality check.
- Developed Swagger UI documentation for the REST API's.
- Developed Angular Components, Services, and Filters and took part in developing unit test and integration test cases using Jasmine, Karma.

Environment: Java 1.8, JavaScript, Hibernate, Kafka, GitHub, Spring Boot, Spring Batch, Eclipse, Unix, JUnit, Log4J, Angular 8/9, HTML5, CSS3, and Bootstrap, Docker, AWS, PCF, Swagger, Microservices, JIRA, Jenkins, SOAP, WebSphere, MongoDB, NoSQL, Log4j, Jenkins, Jasmine, Karma, JIRA, GIT, Maven, SonarQube, Agile.

Wells Fargo

Full Stack Java Developer

Jun 2022 - Sep 2023

- Involved in all phases of Software Development Life Cycle (SDLC) including analysis, design, development, and testing of the project.
- Used Spring MVC framework for implementing Model-View- Controller (MVC) architecture at the Web tier level to isolate each layer of the application so that complexity of integration will be reduced, and maintenance will be very easy.
- Planning, analysis, design and implementation of different modules using Agile (Scrum) Methodology.
- Designed and developed using the Java collection API with Java 1.8 features and for Authentication and authorization extensively Spring Security is used.
- Developed the backend using Spring Boot, Spring, JPA query factory, Restful API.
- Gained hands-on experience with Vue.js, Vuex, and Vue Router while working on internal projects.
- Contributed to bug fixes and UI improvements for existing web applications.
- Implemented OIDC-based user authentication for client web applications.
- Integrated identity providers (IdPs) such as Okta and Auth0 to enable secure SSO functionality.
- Utilized JSON Web Tokens (JWT) for secure user identity and access management.
- Used ReactJS in components like JSX, creating React components, Virtual DOM, React Props, Lifecycle methods, working with React States and Events.
- Used React.js for developing UI using sorting, pagination and rendering for searching the statements on the webpage.
- Implemented SQL Queries stored procedures and triggers using PostgreSQL.
- Responsible for implementing PL/SQL queries and utilizing MySQL stored procedures and built-in functions for efficient data retrieval and updates, ensuring seamless database interactions within the application environment.
- Proficient with Shell, Python, Ruby, Perl, PowerShell, JSON, YAML, Groovy scripting languages.
- Developed and then implemented user interface by using the ReactJS to handle cross browser compatibility issues in different browsers.
- Developed Google DataFlow jobs using Apache Beam for efficient data transfer between BigQuery and Spanner, as well as from Google Pub/Sub to BigQuery, ensuring seamless data integration and management.
- Crafted and deployed microservices using Spring Boot on OpenShift, designed to query data effectively from Google Spanner and BigQuery, enhancing data accessibility and application responsiveness.
- Developed bootstrap UI JS using with AngularJS, Hibernate4 , NOSQL
- Implemented the Drag and Drop functionality using React-Draggable.
- Created and maintained JSP and HTML to render and display the Content and reports on UI.
- Created HTML, CSS, JavaScript, TypeScript, ECMAScript, Bootstrap, Ajax, jQuery and React.JS to develop and customize the User Interface to show the reports in various dimensions.

- Used AJAX to call the REST API methods and connect to the backend. Restful web services have been used to retrieve and update the data using this AJAX.
- Implemented complex business rules and decision-making logic using Drools Rule Language (DRL) and decision tables.
- Configured Maven dependencies for application building processes that created Pom.xml files.
- Worked on different Automation tooling techniques to support reporting/development and the CI/CD pipeline.
- Developed Helm charts for packaging and deploying applications on Kubernetes, streamlining application releases and updates.
- Worked closely with DevOps teams to integrate Kubernetes deployments with infrastructure automation tools and streamline the overall deployment process.
- Built data pipelines using Azure Data Factory and implemented data transformations using Azure Databricks for efficient data processing and analytics.
- Collaborated with DevOps team to establish CI/CD pipelines using Azure DevOps, enabling continuous integration, testing, and deployment.
- Developed microservices architecture using Rest APIs, spring boot and pivotal cloud foundry (PCF).
- Implemented modules into Node.JS to integrate with designs and requirements.
- Analyzed the Node.JS server structure in legacy project, then mimicked the REST service by using java JAX-WS API and did the corresponding configurations.
- Created a set of classes using DAO pattern to decouple the business logic and data.
- Created POC for Spring Batch for running batch jobs. Documented how Spring Batch is useful for the current project.
- Developing Rest Services using Rest Template with Spring Boot and Gradle.
- Implemented SOA to develop REST Based Web services using Apache Tomcat.
- Implemented and used Rest Web Services with the help of JAX-RS to get updates from third parties.
- Used Spring ORM Hibernate Template as the ORM tool to communicate with the database.
- Involved in creating and extracting data from databases using SQL Queries, PL/SQL Stored procedures, triggers, and packages on Oracle database.
- Involved in designing the database migration from DB2 to Azure Cosmos DB for transferring data.
- Created plugins to extract data from multiple sources like Apache Kafka, Database and Messaging Queues.
- Used Docker to provide virtual deployment containers and push the code to the cloud using PCF.
- Implemented Log4J for Logging Errors, debugging and tracking using loggers, appends components.
- Performed GitHub/GitHub-Desktop bash and Terminal commands to clone, fetch, merge and push the code and created pull requests for changes that are made.
- Proficient in using XML/JSON and AJAX to link with back-end applications.
- Used JIRA tool for Issue/bug tracking, monitoring of work assignment in the system.
- Developed test cases and performed unit testing using Junit and writing the test cases for front end using Jasmine and Karma.

Environment: Java 1.8, Spring, Spring Boot, Spring MVC, Microservices, Azure, Google Cloud Platform - GCP(Google BigQuery, Google Spanner, Google Pubsub, Google DataFlow),PCF, Kafka, Hibernate, React.js, Redux, Flux, Bootstrap, Node.js, HTML5, CSS3, JavaScript, Rest, Swagger, WebSphere, JSON, AJAX, Apache Tomcat, SQL, PL/SQL, Oracle, MongoDB (NoSQL), Docker, Jenkins, Maven, Git, Agile.

American Express

Full Stack Java Developer

Apr 2018 - May 2021

- Used Agile methodology and effectively took part in Scrum gatherings to deliver quality deliverables within time.
- Designed dynamic and browser compatible pages using HTML5, CSS3, jQuery, Ajax, Bootstrap, LESS, ES6 and JavaScript.
- Developed Single page application (SPA) development by using React.JS, Redux, ES6, Node, Babel and Webpack.
- Implemented Google Maps API in a multi-threaded environment to efficiently extract latitude and longitude details from addresses, optimizing data retrieval and processing speed.
- Responsible for leveraging Splunk for efficient log management and analysis, ensuring real-time monitoring and rapid troubleshooting of Java applications, which contributes to enhanced system reliability and operational efficiency.
- Accountable for utilizing Dynatrace for application performance monitoring (APM), focusing on optimizing Java application performance by analyzing system metrics, user experience, and application dependencies.
- Involved in working with Babel and Webpack in application build and deployment processes.
- Developed the administrative UI using React.js, Webpack and Node.js.
- Built an online system using XML, Javascript, AJAX, Struts 2.0, JDBC.
- Designed and implemented responsive user interfaces using HTML, CSS, and JSPs, coupled with expertise in using Java 8 diagnostic tools for in-depth analysis of heap and thread dumps.
- Successfully implemented the Hystrix circuit breaker pattern, enhancing system resilience and stability. Contributed to API

integration by parsing Swagger specifications. Improved code quality through the addition of comprehensive unit tests using JUnit and Mockito. Demonstrated proficiency in Version Control Systems (VCS) and actively engaged in peer code reviews for collaborative quality assurance.

- Utilized SonarQube to enforce coding standards and best practices, resulting in enhanced code reliability and adherence to industry standards in Java development.
- Developed and maintained web applications using secure coding practices and SAML-based SSO.
- Implemented secure token-based authentication using OAuth2 for web APIs.
- Designed and developed the login portal using framework Angular 2 along with HTML5, CSS3 and Typescript.
- Experience in developing Web based GUI using JSP, HTML, DHTML, CSS, JavaScript (and its frameworks like JSON),
- Action Script, DOJO, Node JS, Angular JS, JQuery, EXT JS and Ajax.
- Performed UNIX Shell scripting for the application.
- Involved in code reviews and unit testing using JUnit framework..
- Collaborated with cross-functional teams to provide technical guidance on SAML and OAuth2 best practices.
- Involved in developing Thread Safe blocks for multithread access and distributed transaction management.
- Created and injected spring services, controllers and DAOs to achieve dependency injection.
- Heavily used Spring Inheritance, Auto-wiring, Core Container, Security, AOP, Spring Quartz for scheduling tasks to generate reports and emails to clients.
- Developed Persistence layer using Spring Data to interact with the Database.
- Developed Spring Restful/Microservices and implemented Spring Restful/Microservices and Spring Eureka, Netflix, Ribbon as part of Services Discovery using Apache Axis.
- Implemented Spring MVC flow to interact with different modules and extensively used Spring AOP and Dependency injection during various modules of the project.
- Used the fundamentals of Java 1.8 features like parallel streams and filters through lambda expressions to handle searching.
- Collaborated with DevOps team to build CI/CD pipelines for seamless deployment of Kubernetes applications using Jenkins and GitLab.
- Utilized Mockito extensively for creating mock objects in unit testing, enhancing the testing framework for Java applications and ensuring thorough validation of code behavior under various conditions.
- Designed and implemented an IoT solution using Azure IoT Hub and Azure Functions.
- Developed cloud-native applications on Azure, utilizing Azure services for storage, computing, and networking.
- Experience in Creating, Dropping Indexes, Tables, Stored Procs and Views on Oracle DB..
- Collaborated with cross-functional teams to gather requirements and design solutions using Azure best practices.
- Integrated Azure Machine Learning for predictive analytics and anomaly detection.
- Developed with Spring Eureka to retrieve API routes for the entire cluster. Using this strategy each spring service in a cluster can be load balanced and exposed through one API gateway.
- Used Spring Boot framework to write Presentation Layer, Business Layers and Controller servlets.
- Employed Spring Boot for initializing and bootstrapping the build configuration for the boot-based web applications.
- Implemented Authentication & Authorization with SiteMinder and Spring security.
- Implemented REST based web services using JAX-RS annotations, Jersey provider and consumed using HTTP services from angular 2 modules.
- Implemented Micro Services using Spring Boot, Spring Cloud, and Spring Microservices.
- Used Amazon Web Services (AWS) like EC2, S3, cloud watch and Elastic Beanstalk for code deployment.
- Used AWS deployment services to quickly set up a dynamic website and configured virtual servers.
- Writing Entities in Java, Play Framework along with named queries to interact with databases.
- Developed code using Core Java to implement technical enhancement following Java Standards.
- Developed the Spring AOP programming to configure logging for the application.
- Amazon Web Services like EC2, S3, Amazon SimpleDB, Amazon RDS, Amazon Elastic Load Balancing, Amazon SQS, AWS Identity and access management, Cloud Watch, EBS and Cloud Front.
- Worked on creation of custom Docker container images, tagging, pushing images, integration of Spring boot.
- Worked with the Node package manager along with Karma, Jasmine, Grunt and Bower for test and build.
- Smoke Test and Acceptance Testing is performed with Selenium in multiple Java platforms.
- Used Maven and Jenkins to automate the build and deploy process and Git was used for project management and version management.

Environment: Java 1.8, Spring MVC, Spring Boot, Microservices, HTML5, CSS3, JavaScript, Node.js, Spring Data, MongoDB (NoSQL), ReactJS, Redux, Oracle 11g, Junit, Mockito, Git, Selenium, Scala, Drools, AWS, Google Cloud Platform - GCP(GoogleAPI),PCF, Docker, Spring Cloud, RESTful web services, Swagger, Apache Tomcat, Apache Kafka, Camel, Maven, Jenkins, Karma, Jasmine.

American Express

Full Stack Java Developer

Apr 2018 - May 2021

- Designed, coded, implemented, optimized, and tested new features and modules for the derivatives system as part of an Agile team and improved automation test suites.
- Developed web pages using JavaScript, HTML, CSS, jQuery, JSON, JSP, AJAX, Bootstrap.
- Used parsers like SAX and DOM for parsing xml documents and used XML transformations using XSLT.
- Took part in setting up the routing configuration using Angular 4 router for various views and sub views.
- Developed Web API using Node JS and hosted on multiple load balanced API instances.
- Implemented Java 1.8 features such as lambda expressions, filters, and Parallel operations on collections for effective sorting mechanisms.
- In depth exposure to creating API for internal and external application using REST and SOAP based design. Open source framework like Jersey used for create REST API.
- Developed Junit tests, integration test using Mockito.
- Used XML and JSON for transferring/retrieving data between different Applications...
- Developed Rest Web Services clients to consume those Web Services as well other Enterprise-Wide Web Services.
- Worked with Spring AOP module to perform logging operations.
- Managing Source code in CVS and SVN and Project Documents in Share Point.
- Used Spring Boot for initializing and bootstrapping the build configuration for the boot-based web applications.
- Development of cloud hosted web applications and REST APIs using Spring Boot with embedded Tomcat.
- Extensively Used Jenkins as Continuous Integration tools to deploy the Spring Boot Microservices to Pivotal Cloud Foundry (PCF) using build pack.
- Utilized Hibernate for Object Relational Mapping (ORM) purposes for persistence on to the database.
- Used Spring MVC, AOP, IOC and Hibernate to establish the Connection with Database for Stored Procedures.
- Created Web Services (SOAP) between different components and also exposed few web services to client apps get metadata for the specific entities and documents.
- Unstructured data was handled using Mongo DB and Mongoose Connector for connecting to database.
- Used CI/CD tools Jenkins, Git/GitLab's and Docker registry for configuration and automation using Ansible.
- Used Drools as rule engine to categorize salient level rule to every business rule based on the business needs.

Environment: Java 1.8, Microservices, HTML5, CSS3, Angular 4, Spring Boot, Spring AOP, Spring MVC, Hibernate, Node JS, JSON, Kafka, Ansible, Pivotal Cloud Foundry (PCF), Jenkins, GIT, Docker, Drools, MongoDB (NoSQL), Selenium, Apache Kafka, EC2, AWS.
