

SUMMARY

Software Engineer with 4+ years of experience in designing and developing high-performance web applications using technologies like Node.js, Express.js, J2EE, Spring Boot, Spring MVC, Spring Security, Hibernate, and JPA. Adept at building scalable microservices architectures with secure authentication and robust data persistence using MongoDB, MySQL, and PostgreSQL. Proficient in developing and integrating RESTful APIs, with hands-on experience deploying cloud-native applications on AWS (EC2, Lambda, S3, RDS) and managing containerized environments using Docker and Kubernetes. Skilled in crafting responsive front-end interfaces using React.js, Next.js, Angular 10+, RxJS, Redux, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, and AJAX, ensuring cross-browser and device compatibility. Strong foundation in Object-Oriented Programming (OOP) principles and software development best practices.

SKILLS

Methodologies: SDLC, Agile/Scrum, Waterfall

Languages: TypeScript, JavaScript, Java, Python, SQL

Frontend Frameworks/Libraries: Angular 10+, React.js, Next.js, Redux, Bootstrap 5, jQuery

Backend Frameworks/Libraries: Node.js, Express.js, Django, J2EE

Web Technologies: HTML5, CSS3, Tailwind CSS, AJAX, JSON, XML

Cloud/Application Server: AWS (CloudFront, S3, Lambda, API Gateway, Amplify), GCP (Firebase, Cloud Functions, Storage)

Database: MongoDB, PostgreSQL, Firebase Realtime DB, DynamoDB, MySQL, SQL

Tools: Git, GitHub, Jenkins, Postman, Chrome DevTools, JIRA, Figma, Docker, VSCode, Atom

Testing & Debugging: Jest, Cypress, Enzyme, Lighthouse

Deployment & CI/CD: Netlify, Vercel, GitHub Actions, Docker, Kubernetes, Jenkins

Certifications: AWS Certified Solutions Architect - Associate (2025)

WORK EXPERIENCE

State Street Corporation, Kansas City, MO

Aug 2024 – Current

Software Engineer

- Redesigned legacy Spring-based microservices into modular, efficient Spring Boot 3 applications using Java 17, resulting in a 25% boost in API responsiveness and reduced memory consumption across core services.
- Orchestrated containerization of backend services using Docker, and established staging environments mirroring production, which reduced environment mismatch bugs and cut support tickets by 40% over three quarterly release cycles.
- Implemented CI/CD pipelines for Java-based microservices using GitHub Actions, leading to a 70% reduction in manual deployment errors across development, staging, and production environments.
- Developed automated testing frameworks using JUnit for backend logic and Cypress for UI flows, improving test coverage by 60% and significantly enhancing code quality and release confidence.
- Architected serverless solutions on AWS using Lambda, S3, and API Gateway to automate the loan document intake and classification process, eliminating repetitive tasks and saving over 12 hours of manual effort weekly.
- Established comprehensive observability using AWS CloudWatch, setting up real-time dashboards and tailored alarms that decreased mean time to resolution (MTTR) from over 3 hours to under 45 minutes for production issues.

Accenture, India

Jun 2021 – Jul 2023

Software Engineer

- Built modular and interactive UI components using React.js and Redux, optimizing performance through lazy loading and memoization, which enhanced application speed and increased client satisfaction by more than 35%.
- Constructed secure, scalable RESTful APIs using Node.js with Express, designed to handle high concurrency and integrate with external systems, sustaining over 10,000 requests per day with zero downtime for over six consecutive months.
- Spearheaded a large-scale UI migration project from outdated CSS to Tailwind CSS, establishing consistent design patterns and reducing frontend styling efforts by 40% across over five client-facing projects.
- Architected user-centric, component-based front-end solutions using Angular 10+ and TypeScript, streamlining complex workflows and improving task completion speed by 30% for 15,000 daily users while maintaining 99.95% application uptime.
- Engineered cron jobs for automating data aggregation, health checks, and reports, boosting reliability and cutting manual effort by 40%; collaborated via JIRA to manage priorities and align development with QA for timely delivery.

Accenture, India

May 2020 – May 2021

Junior Software Engineer

- Migrated and maintained frontend modules from AngularJS to Angular 6+, for employee-facing internal tools, enhancing accessibility and improving responsiveness for over 5,000 regular users.
- Collaborated with backend teams to refactor Node.js APIs and redesign MongoDB collections, ensuring compatibility with the upgraded Angular 6+ interface and improving data sync speed by 30%, enhancing user experience.
- Automated daily operational processes such as log backups, server health checks, and report generation using Python and Bash, saving nearly 60+ hours of manual work every month for the infrastructure support team.
- Participated actively in Agile ceremonies including sprint planning, backlog grooming, and team retrospectives, contributing to a 15% improvement in sprint velocity and achieving 95%+ sprint goal completion rate over 6 months.
- Designed and executed Postman test collections for API validation, integrating them into existing CI pipelines, which led to 30% earlier bug detection and reduced UAT cycle time by 25%, improving overall deployment efficiency.

EDUCATION

Master of Science in Computer and Information Systems

The University of Central Missouri - Lee's Summit

Coursework: Advanced Database, Advanced Algorithms and Computation, NoSQL Databases, Computer Networking, Data Mining
