PROJECTS

Thrift-a-Ticket:

- Allowed the user to look up tickets based of venue, artist, or location
- Used, Javascript/HTML along with CSS for the GUI customization
- Written in Java and utilized a SQL database on the backend
- Spring Boot was used for frontend to backend connectivity
- Used the Discovery API to pull data on purchasable tickets and their prices

AI Loan Predictor Model:

- Written in Python, it allowed the processing of a csv file to determine the likelihood of an individual getting their loan approved based on certain metrics
- Utilized 3 models for accuracy comparison: Decision Tree, Random Forest, and Logistic Regression
- Created data visualization to show the accuracy comparison of each of the models

Amilia Activity Checker for the City of Escondido:

- Developed a robust GUI application using Tkinter for validating date ranges and cost data in Excel files
- Built dynamic data validation algorithms to check activity start/end dates and costs
- Integrated Excel data handling using pandas for efficient data processing
- Ensured user-friendly error handling with detailed feedback for invalid inputs or missing data
- Used Flask to aid with department wide deployment

BeatCraft:

- Designed and implemented a Kotlin-based Android application using Android Studio
- Integrated the Gemini API to fetch and process data for personalized song recommendations based off 3 questions asked of the user
- Created an intuitive user interface to collect user inputs and display playlists dynamically
