PROFESSIONAL SUMMARY

Data professional with experience in analytics, machine learning, and AI, developing predictive models, scalable data solutions, and intelligent automation systems. Proficient in Python, SQL, TensorFlow, Scikit-learn, AWS, Kafka, Power BI, Tableau, and modern LLM frameworks including Claude and OpenAI. Experienced in building data pipelines, real-time analytics systems, anomaly detection models, and RAG applications. Skilled at transforming complex data into actionable insights that support data-driven decision-making.

EDUCATION

University of Texas at Dallas, Dallas

Master of Science, Computer Science

May 2026

GPA 4.0/4.0

(Coursework: Machine Learning, Natural Language Processing, Big Data, Statistical Methods for Data Science, Database Design, Design and Analysis of Algorithms)

Gujarat Technological University, Ahmedabad

Bachelor of Engineering, Information and Communication Technology

May 2024

GPA 3.72/4.0

SKILLS

Programming: Python, SQL, R, REST APIs

Frameworks & Libraries: Django, Streamlit, TensorFlow, Keras, PyTorch, scikit-learn, OpenCV

Cloud & Databases: AWS (EC2, Lambda, Glue, Athena), Azure, Docker, Apache Spark, Kafka, MongoDB, MySQL, Firebase, Snowflake

Tools: Git, Jira, Visual Studio Code, Microsoft Office 365, Canva, Figma, Tableau, Power BI, Databricks

Soft Skills: Leadership, Time Management, Critical Thinking, Multi-Tasking, Problem Solving, Quick Learner

EXPERIENCE

Tridhya Tech, India

May 2024 – June 2024

Data Analyst Intern

- Analyzed datasets from 20+ companies across multiple industries using Python and SQL to support strategic planning and market insights.
- Built interactive Power BI dashboards to visualize key metrics, improving reporting efficiency and stakeholder decision-making.
- Cleaned, transformed, and validated large datasets using Python and SQL, ensuring high data quality and consistency for accurate analysis.
- Generated actionable insights by identifying cross-industry trends and patterns, to make data-driven decisions and improve strategic planning.

BISAG-N, India

January 2024 – May 2024

Machine Learning Intern

- Improved demand forecasting accuracy by 10% using predictive models (XGBoost, Random Forest) on large-scale retail datasets efficiently.
- Built a real-time monitoring system using Python and Streamlit to track shelf data and enhance operational visibility significantly.
- Designed and automated data pipelines for continuous data processing reducing manual effort and improving workflow efficiency consistently.
- Achieved Validated model outputs and optimized system performance to ensure reliability, scalability, and consistent results effectively.

RadicalX, India

November 2023 – January 2024

Artificial Intelligence Engineer Intern

- Built scalable data processing workflows using AI tools (OpenAI, LLaMA 2, TensorFlow) for structured and unstructured data efficiently.
- Developed application components for text processing and classification, improving efficiency of data-driven workflows significantly.
- Led end-to-end feature development, aligning technical implementation with project requirements and business objectives clearly.
- Improved system performance through debugging, testing, and iterative optimization of data processing pipelines effectively.

PROJECTS

LLM-Based Anomaly Detection System

April 2026

- Developed an explainable intrusion detection system using the NSL-KDD cybersecurity dataset, applying data cleaning, one-hot encoding, feature scaling, and binary attack classification to prepare network traffic data for analysis.
- Built XGBoost, CNN, and Autoencoder models within a hybrid voting framework that achieved highest detection accuracy, integrating SHAP explainability and Gemini 2.5 Flash to generate human-readable threat interpretations.

Global Education Trends Analysis – Indian Students Abroad

March 2026

- Collected, cleaned, and transformed international student mobility data from government reports and PDF sources using Python and Pandas, creating an analysis-ready dataset to evaluate study-abroad trends across major destination countries.
- Developed interactive Tableau dashboards featuring trend analysis, country comparisons, and COVID-19 impact visualizations, uncovering key insights on student migration patterns, destination preferences, and the influence of visa policies and affordability factors.

Gamora Labs - AI Academic Assistant and Mentor Platform

April 2025

- Developed an AI-powered academic assistant using Gemini 1.5 Pro, Python, and MySQL that converted natural language queries into SQL and retrieved real-time academic information through Nebula API integration.
- Built a secure Streamlit-based platform with bcrypt authentication, query validation, and SQL injection protection, while designing a mentor-mentee matching and scheduling system that centralized academic support and improved student collaboration.

Real-Time Stock Market Data Analysis

November 2024

- Engineered a real-time financial data pipeline using Apache Kafka, Python, AWS S3, Glue, and Athena to ingest, process, and store high-frequency stock market data for scalable analytics and reporting.
- Designed automated ETL workflows and cloud-based data lake architecture, enabling low-latency querying, trend analysis, and near real-time insights into market movements and trading activity.

CERTIFICATIONS

Data Science Specialization, IBM ([Coursera](#))

August 2024

Machine Learning Specialization, Stanford ([Coursera](#))

September 2022
