

Ashwin Pal

Data Analyst | BI Analyst | Data Scientist

Vancouver, Canada | +1 (778) 388-5849 | ashwinpraneelpal@hotmail.com | [LinkedIn](#) | [GitHub](#) | [MIT E-Portfolio](#)

PROFESSIONAL SUMMARY

Data Analyst and BI-focused analytics professional with 5+ years of experience supporting mission-critical financial systems, analyzing workflow and incident data, improving ETL reliability, and translating operational data into dashboards, KPIs, and actionable insights. Strong hands-on background in SQL, Python, Power BI, Tableau, Splunk, Grafana, ETL/ELT, data validation, and stakeholder-facing technical documentation. Completed MIT programs in applied data science and data engineering, with project experience across predictive modeling, data warehouses, streaming pipelines, and BI reporting.

TECHNICAL SKILLS

Data Analysis & BI: SQL, Python, Excel, PivotTables, Power Query, Power Pivot, advanced formulas, XLOOKUP, Pandas, NumPy, Power BI, Tableau, Jupyter Notebook, Google Colab, KPI reporting, dashboards, data validation, data cleansing, trend analysis

Statistics & Analytics: Descriptive statistics, probability, hypothesis testing, regression analysis, statistical inference, statistical analysis, forecasting, A/B testing, model evaluation

Databases & Data Modeling: PostgreSQL, SQL Server, MySQL, SQLite, MongoDB, Cassandra, Redis, Firebase, relational modeling, reporting schemas

Data Engineering & Automation: ETL/ELT, Apache Spark, PySpark, Kafka, Airflow, NiFi, Hadoop, Debezium, CDC, Docker, CI/CD, Git, GitHub

Monitoring & Operations: Splunk, Grafana, Control-M, Dollar Universe, ServiceNow, PagerDuty, Azure DevOps, incident analysis, workflow reliability, production support

Machine Learning: Scikit-learn, TensorFlow, Keras, regression, classification, clustering, NLP, time-series forecasting, recommendation systems

EXPERIENCE

Analyst / Specialist | Vancity Credit Union, Vancouver, BC

May 2022 - Present

- Analyzed workflow, incident, application, and systems data across enterprise batch processes to identify recurring failures, root causes, processing delays, data-quality issues, and operational risk trends.
- Monitored system, application, and workflow data through Splunk and Grafana, reviewing performance trends, security events, processing failures, availability indicators, and exceptions across 10+ critical financial platforms.
- Investigated ETL, Azure Pipeline, and BI workflow failures by reviewing logs, validating dependencies, tracing upstream/downstream impacts, identifying root causes, and reducing incident triage time by 30%.
- Built and maintained operational dashboards, monitoring views, support procedures, and incident-response documentation to improve visibility into batch processing, workflow health, and recurring production issues.
- Automated and maintained enterprise workflows using Control-M and Dollar Universe, coordinating schedules, dependencies, batch processing, releases, maintenance activities, and vendor-supported upgrades while reducing manual monitoring effort by 25%.
- Tracked incidents, resolutions, service interruptions, recurring failures, and workflow trends through ServiceNow and PagerDuty, improving escalation visibility by 20% and supporting faster business and technical decision-making.

PROJECTS

Machine Learning Decision-Support System | Python, Scikit-learn, TensorFlow, Pandas, Power BI

- Prepared and analyzed 50K+ structured records using Pandas, NumPy, and statistical techniques; engineered 25+ features for classification, regression, clustering, and model evaluation workflows.
- Trained 8 predictive models and achieved 88% accuracy, then translated outputs into Power BI dashboards with 10+ KPIs, risk scores, trends, model insights, and decision-support recommendations.

Healthcare Data Warehouse | Python, SQL, PostgreSQL, Power BI

- Processed and refined 2.1M+ inpatient discharge records using PostgreSQL and advanced SQL, applying validation and cleansing logic to improve data integrity, consistency, and query efficiency.
- Composed reporting schemas and performance-tuned SQL views to support BI consumption, reducing manual reporting effort by 10+ hours/week through reusable modeled datasets.

Real-Time Data Engineering Pipeline | Python, Kafka, Spark, Airflow, NiFi, Docker, Debezium

- Designed a batch and streaming pipeline using Kafka, Spark, Airflow, and NiFi, processing 100K+ records through orchestration, transformation, validation, and real-time data workflows.
- Implemented 6 containerized services with Docker, change-data capture using Debezium, and automated CI/CD workflows through GitHub Actions, reducing deployment effort by 40%.

EDUCATION

Professional Certificate in Data Engineering | Massachusetts Institute of Technology (MIT) | 2025 - 2026

Coursework: ETL/ELT, Spark, Kafka, Airflow, NiFi, Docker, CDC, Debezium, REST APIs, SQL/NoSQL, CI/CD, REST APIs SQL/NoSQL, CI/CD

Applied Data Science Program Certificate | Massachusetts Institute of Technology (MIT) | 2024 - 2025

Coursework: Machine Learning, Deep Learning, Statistics, probability, hypothesis testing, regression analysis, model evaluation, NLP, Transformers, Generative AI, RAG, Forecasting, Computer Vision

Data Analytics Diploma | Lighthouse Labs | 2024

Coursework: Python, R, SQL, Excel analytics, PivotTables, Power Query, statistical analysis, ETL, PostgreSQL, PySpark, Power BI, Tableau, TensorFlow, Scikit-learn

Computer Information Systems Administration Diploma | British Columbia Institute of Technology (BCIT) | 2020 - 2022

Coursework: Python, Linux, PowerShell, Windows Server, AWS, Azure, Virtualization, Networking, SIEM, System Security
