PROFESSIONAL SUMMARY

Data Analyst with 3 years of experience in extracting, cleaning, and transforming complex datasets to drive data-driven decision-making. Skilled in developing analytical models and insightful reports for e-commerce and marketplace platforms. Proficient in Python (Pandas, NumPy), R (dplyr, ggplot2), SQL, and data visualization tools like Tableau and Power BI. Experience includes optimizing data pipelines and supporting business intelligence initiatives to enhance operational efficiency and customer understanding. Applies analytical techniques to uncover trends and patterns, delivering actionable insights for stakeholders.

TECHNICAL SKILLS

Programming & Scripting: Python, R, SQL, Pandas, NumPy, dplyr, ggplot2
Data Analysis & Spreadsheets: Amplitude, Google Analytics, Excel (Pivot Tables), Excel (Formulas), Excel (VLOOKUP), Excel (Data Validation), Excel (Conditional Formatting), Excel (Data Analysis ToolPak), Excel (VBA/Macros), Excel (Solver), Excel (Power Query)
Data Warehousing & Databases: Snowflake, BigQuery, Redshift, MySQL, PostgreSQL, SQL Server
Business Intelligence & Reporting: Tableau, Looker, Mode, Power BI, Google Data Studio
E-commerce & Marketplace Platforms: Shopify

WORK EXPERIENCE

Brandless, Data Analyst	Feb 2022 to Present
- Developed interactive marketing dashboards using Tableau and Google Data Studio, providing clear visualization for key performance indicators and campaign effectiveness to stakeholders. - Interpreted complex customer behavior datasets using SQL to identify key purchasing trends and segmentations on the e-commerce platform for strategic planning. - Performed deep-dive analyses on product performance and sales velocity, utilizing Shopify data and SQL to inform critical inventory management decisions. - Identified opportunities for supply chain optimization by analyzing logistics data, which helped improve overall efficiency for direct-to-consumer delivery processes. - Built and maintained robust data models using SQL, ensuring data accuracy and consistency for various cross-functional reporting requirements and subsequent analyses. - Presented actionable insights and data-driven recommendations to leadership, effectively informing strategic decisions across marketing, product, and operational departments. - Designed data requirements for A/B tests and accurately measured the impact of various product and marketing initiatives using Google Analytics. - Contributed to the continuous improvement of Brandless's data infrastructure, tools, and processes, enhancing overall analytical capabilities for the platform. - Analyzed marketing campaign effectiveness and customer acquisition costs using Google Analytics, which optimized ad spend and user engagement strategies. - Performed ad-hoc statistical analyses using Python and R to gain deeper insights into customer churn and lifetime value metrics.	
Faire, Data Engineer	Jun 2022 to Jul 2023
- Managed complex SQL queries to extract and transform retailer behavior data from Snowflake, supporting detailed product feature analyses effectively. - Created interactive dashboards in Looker and Tableau, visualizing key retailer acquisition and engagement metrics for various business teams. - Analyzed A/B test results for new marketplace features using Python, influencing product development decisions and optimizations with data. - Built robust data models in BigQuery to predict retailer lifetime value, supporting strategic planning for growth initiatives with precision. - Implemented robust data validation processes for incoming wholesale transaction records using SQL, ensuring high data quality for downstream analytics. - Generated comprehensive reports in Excel with pivot tables and formulas, presenting key financial summaries for retailer payout reconciliation. - Modeled detailed data structures to support key performance indicators for local community engagement, utilizing PostgreSQL for scalability requirements. - Assisted senior analysts with exploratory data analysis, identifying significant trends in retailer purchasing behavior across various product categories using R. - Produced dashboards in Power BI, visualizing trends in brand onboarding efficiency and seller performance to inform operational improvements. - Documented data dictionaries and analytical methodologies for internal data assets, improving knowledge transfer and maintaining data integrity standards.	

EDUCATION

Masters in Information Technology Management

Saint Francis College

CERTIFICATIONS

My SQL Basics certification
Python Fundamental Course
Cyber Security certification
Pre-Conference Tutorial on "UI DEVELOPMENT USING ANGULAR JS AND ANGULAR"
