PROFESSIONAL SUMMARY

Data Analyst with 4 years of experience in data analysis, reporting, and business intelligence across diverse datasets. Specializes in extracting actionable insights and developing comprehensive data solutions to support decision-making. Proficient with Python, SQL, Excel, and R for data manipulation, statistical analysis, and visualization. Skilled in creating interactive dashboards using Tableau and Power BI, along with experience in cloud platforms like GCP for data management. Contributes to enhancing operational efficiency and data-driven strategies through meticulous data collection, cleaning, and model development.

WORK EXPERIENCE

ZeOmega , Data Analyst	Jun 2023 to Present
- Developed SQL queries to extract and manipulate structured healthcare datasets for analytical projects, providing foundational support for data-driven insights. - Assisted in cleaning and validating complex healthcare data, ensuring accuracy and consistency for reporting and business intelligence initiatives using SQL. - Built data visualizations and basic dashboards using SSRS and Excel for tracking population health metrics, helping stakeholders understand key trends. - Performed initial exploratory data analysis on health plan data to identify emerging patterns and anomalies, contributing to broader analytical efforts and stakeholder insights. - Supported senior analysts by preparing data and preliminary reports for presentations, assisting in delivering insights to improve operational efficiency and decision-making. - Created and updated database views and stored procedures in SQL Server to streamline data retrieval for reporting purposes, improving data accessibility. - Maintained data integrity standards by documenting SQL query logic and data transformation processes for healthcare datasets, ensuring reliable analytics and reporting. - Utilized SSIS to develop packages for integrating data from multiple sources, contributing to a robust foundation for population health management analytics. - Analyzed performance metrics related to healthcare workflows using Excel and basic statistical functions, providing foundational support for data model development and insights. - Reviewed and optimized existing SQL Server queries to enhance the speed of data extraction for critical business intelligence reports, improving system responsiveness.	

InMarket , Data Engineer	Jun 2021 to Nov 2022
- Collected, cleaned, and validated diverse structured and unstructured datasets, including location and advertising interaction data, ensuring accuracy for consumer intelligence platforms. - Wrote complex SQL queries to extract and manipulate large-scale consumer behavior data for ad campaign performance analysis and audience segmentation. - Developed interactive dashboards and reports using Tableau for visualizing key performance indicators of digital advertising campaigns and market trends. - Performed exploratory data analysis to identify significant trends and patterns within advertising engagement data, supporting strategic decision-making for ad placements. - Assisted in building foundational data models and defining performance metrics for tracking advertising campaign effectiveness and consumer conversion funnels. - Maintained rigorous data integrity standards and documented analytical processes for consumer intelligence datasets, enhancing reliability of marketing insights. - Supported senior analysts by preparing detailed reports and data visualizations, contributing to actionable insights for optimizing digital advertising strategies. - Utilized Excel, including pivot tables and advanced formulas, to analyze specific advertising campaign segments and present findings on market responsiveness. - Developed Python scripts using Pandas and NumPy for advanced data manipulation and statistical analysis of audience demographic and behavioral data. - Interacted with relational databases like MySQL to retrieve and structure data supporting real-time advertising campaign monitoring and reporting needs.	

TECHNICAL SKILLS

Cloud Platforms: Google Cloud Platform (GCP), Google Cloud Storage (GCS)
Big Data Technologies: Spark, Hadoop
Programming & Scripting: Python, R, SQL, VBA
DevOps & Version Control: Git, Kubernetes, Docker
ETL & Data Orchestration: SSIS, Apache Airflow
Machine Learning Libraries: Scikit-learn, StatsModels
Databases & Data Warehousing: MySQL, PostgreSQL, SQL Server, BigQuery, SQL Server Management Studio (SSMS)
Data Analysis & Business Intelligence: Excel, Pandas, NumPy, Tableau, Power BI, SSRS, SSAS, Power Query, Power Pivot, Jupyter Notebooks

EDUCATION

Master of Science in Computer Science University of Massachusetts Lowell, MA, USA	Dec 2024
