Summary

Data Analyst with 4+ years of experience across financial, retail and enterprise operations, delivering improvements in fraud detection, revenue optimization, and process efficiency. Proficient in SQL and Python for analysis, with hands-on experience building data pipelines using Snowflake, AWS Glue, S3, and Redshift. Developed dashboards using Power BI and QuickSight, and supported self-service analytics via Looker to track business-critical metrics. Skilled at solving high-impact business problems and delivering data-driven analytical solutions.

Technical Skills

- Programming & Data Analysis:** Python, Excel (VBA, Power Query, Pivot Tables), SQL (Joins, CTEs, Window Functions, Aggregates)
- Data Visualization & Reporting:** Power BI, Tableau, QuickSight, Looker
- Big Data & ETL:** AWS (S3, Lambda, EC2), AWS Glue, Redshift, Snowflake
- Project Management & Collaboration:** JIRA, Confluence, Agile & Scrum Frameworks
- Version Control & DevOps:** Git, GitHub, CI/CD

Professional Experience

Data Analyst, Northwest Bank	May 2024 - Present Remote, USA
- Integrated transactional data from PostgreSQL, batch files, and vendor APIs into AWS S3 and Redshift via Glue and SQL staging scripts, producing analysis-ready datasets for fraud detection and compliance reporting. - Optimized large-scale transaction processing in Redshift using sort keys, compression encodings, and materialized views, reducing query execution time by 40% and accelerating investigations. - Performed data profiling, statistical analysis, and data modeling using Python (Dask, Pandas, NumPy, SciPy, statsmodels), flagging unusual transaction patterns and reducing false positives in fraud alerts. - Built fraud feature datasets in Glue and loaded into Redshift for downstream Python-based anomaly detection, using SQL window functions and grouped aggregations, cutting manual review effort by 35% and improving team efficiency. - Designed QuickSight dashboards showing fraud KPIs using parameters, cascading controls, drill-down, and trend lines, enabling investigators to act faster and executives to monitor risk exposure in real time. - Scheduled and monitored data pipelines using AWS Glue Workflows and CloudWatch Events, with built-in alerting and retry logic, achieving a 94% on-time refresh rate in QuickSight dashboards. Collaborated with fraud operations and compliance teams to integrate anomaly detection outputs into Redshift and QuickSight, helping prioritize high-risk alerts and improving case resolution efficiency.	
Data Analyst, HCL Tech	Jan 2020 – Dec 2022 Hyderabad, India
- Built and managed a cloud-native data pipeline using AWS S3, Snowflake, and Snowpipe to ingest sales transactions, product catalog data, and inventory feeds from 100+ stores and e-commerce. - Implemented Medallion Architecture (Bronze–Silver–Gold layers) in Snowflake, with streams and tasks for handling incremental point-of-sale (POS) updates, and stored procedures to automate promotional discount logic and stock adjustments. - Created ETL transformations in Snowflake using SQL for parsing semi-structured clickstream data (JSON), combining with structured sales and product metadata through joins, filters, and aggregations to support multi-layered analytics. - Optimized query performance using clustering keys on high-volume SKU tables, partition pruning, and result caching, reducing average dashboard refresh times by 35%. - Integrated Snowflake with Power BI to deliver dashboards on daily sales trends, inventory turnover, and margin performance, using DAX calculations and drill-down filters, enabling category managers to track profitability. - Built self-service dashboards in Looker using Explores, joins, and dashboards on Snowflake data (sales, inventory, promotions), reducing ad-hoc analyst requests and enabling business users to explore insights independently. - Partnered with Supply Chain and Marketing to define KPIs, identify fulfillment bottlenecks and underperforming SKUs, contributing to a 14% increase in inventory availability.	

Education

Master of Science, University of North Texas	Denton, TX, USA
Business Analytics	Jan 2023 – Dec 2024

Certifications

- Google Data Analytics Professional Certificate
 - AWS Certified Data Engineer - Associate
 - Microsoft Certified: Power BI Data Analyst Associate (PL-300)
 - Oracle Cloud Infrastructure Gen AI Professional
- Course Certificates:**
- SQL championship Program: SQL Fundamentals
 - SQL championship Program: SQL Commands and Constraints
 - SQL championship Program: SQL Advanced Filtering
