

Sri Saideep Vemulapalli
Srivemulapalli36@gmail.com
937-802-0408
Java Developer

PROFESSIONAL SUMMARY:

- Having around 4 years of strong experience in the IT industry with **Highly Dynamic, Challenging Environment, Diversified Exposure** in design, development, and deployment of Web-Based and Client-Server business applications.
- Implemented modules using **Java collection, Java 8** (Streams), **Java 16, Java 17** multi-threading and object-oriented design.
- Experience with all phases of **Software Development Life Cycle (SDLC)** which includes, **requirement analysis, modeling, design, architecture, development, integration, documentation, testing, and deployment.**
- Strong experience in **Spring Framework** modules such as **Spring MVC, IOC, AOP, JDBC, JTA, IO, Spring Dashboard, Spring Boot, Spring Microservices, Spring REST, Spring Eureka, Spring Ribbon, Spring Netflix, Spring Zuul Proxy**
- Integrated Azure Storage solutions, such as Blob Storage and Azure SQL Database, into Java applications for efficient data storage and retrieval.
- Used software development methodologies like **Agile methodologies, TDD.**
- Extensive experience in developing **JAVA** based applications using **JAVA, JEE, JDBC, EJB, Servlets, JSP, JSF, JMS and Web services.**
- Developed Rich Internet Applications using Spring Framework modules such as **Spring Boot, Spring MVC, IOC, JDBC, JTA, IO, Spring Boot, Spring Web Flow, Spring Security.**
- Worked on Core Java concepts like **Multi-threading, Inheritance, Abstraction, Encapsulation, Polymorphism, Exception Handling, Collections and Frameworks.**
- Integrated RESTful APIs with React.js components, facilitating efficient communication between the frontend and backend systems.
- Adapted to emerging trends in JavaScript development, staying updated with the latest ECMAScript standards and incorporating modern JavaScript features into the codebase.
- Used **NodeJS** as a proxy to interact with **RESTful** services and interact with **MongoDB.**
- Experience with Java 8 features like **Date Time API, Optional, Streams API, Parallel Stream** has and filters through lambda expressions.
- Actively participated in test-driven development (TDD) processes, writing unit tests before coding to maintain code quality and achieve higher test coverage.
- **Agile sprint** backlog grooming, sprint planning and sprint review in sprint retrospective.
- Proficient in **Java/J2EE** Design Patterns including singleton, Factory, Model View Controller (MVC), Data Access Object (DAO), and Business Delegate. Well versed with core Java concepts like collections, multithreading, serialization, Java beans.
- Deployed **Spring Boot** based **Microservices Docker** container using **Amazon EC2** container services and using **AWS** admin console.
- Working experience of Relational Database Management Systems (RDMS) like **Oracle, SQL Server, MySQL, DB2 and Non-Relational Databases (NoSQL) like Cassandra.**
- Good experience in using Amazon Web Services like **RDS, EC2, Red shift, Dynamo DB, RDS, Route 53 Cloud Watch and S3.**
- Hands on experience with logging tools like **Log4J, Kibana.**
- Hands on experience with version control systems like **GIT, Stash, and Bitbucket.**
- Developing scripts for build, deployment, maintenance, related tasks using **Maven, Gradle, and ANT.**
- Used Continuous delivery / Continuous Integration (CD/CI) tools like **Team City.**
- Worked on IDEs such as **Eclipse 3.0, Eclipse Juno, NetBeans, RAD and JBuilder X.**

Technical Skills:

J2ee Technologies	Java, J2EE, Struts, Spring, Servlets, JDBC, JNDI, Java beans, Web Services, Hibernate JPA, JMS, MVC, EJB, ESB, JSF, LDAP, JWT, JMX and MQ Series
Micro Services	Spring Boot, Netflix Stack, Pivotal Cloud Foundry, OAuth2.
Web Technologies	HTML 5.0, CSS3, Java Script, jQuery, Bootstrap, AngularJS (v13.0), D3.js, React.js, Knockout.js, Rest AJAX, JSON, XHTML, Ice Faces, JSF and AWS
Continuous integration	Jenkins, Docker
Cloud	AWS (Amazon Web Services), Microsoft Azure
Build Tools	Gradle, MAVEN, ANT
Databases	SQL Server, PL/SQL, Oracle11g/12c, Postgres, MYSQL
Application Servers	Web Logic 12c, Web Sphere 6.1/7.0, Apache Tomcat
Version Control	Subversion, ClearCase 7.0, RTC 3.0, GIT, CVS, CA SCM

EDUCATION:

- Masters in Computer Science, University of Dayton, Dayton, OH.

PROFESSIONAL EXPERIENCE:

Client: Stifel Financial Corp, St. Louis, MO

Sep 2021 – Present

Role: Java Developer

Responsibilities:

- Designed and developed Micro services business components using Spring Boot to consume **REST** based Micro services with Rest template based on **RESTful** APIs.
- Implemented features such as routing, data binding without a page refresh using Angular 6.
- Effectively utilized Jira as a project management and issue tracking tool, ensuring streamlined communication and collaboration within development teams.
- Designed and developed **Microservices** business components using **Spring Boot** and used various component classes to customize the monitoring of **Microservices**.
- Proficient in navigating and administering Linux-based servers for tasks such as log analysis, system monitoring, and performance tuning.
- Designed and developed **Restful APIs** for different modules in the project as per the requirements.
- Implemented Unit Tests and **API** Integration Tests for new features in the product.
- Implemented and exposed service layer using **Spring Boot**, Annotations and controller using **Spring MVC**
- Used **Java 11** new features like **HTTP Client, Nested Based Access Control, Java String Methods, Local Variable Syntax**.
- Designed and implemented robust security solutions using Spring Security framework to safeguard web applications against various security threats.
- Created independent services using **Spring** and **microservice** architecture.
- Used **Spring Kafka API** calls to process the messages smoothly on **Kafka Cluster** setup.
- Selecting the appropriate **AWS** service based on compute, data, or security requirements.
- Integration of **Amazon Web Services (AWS)** with other applications infrastructure.
- Conducted code reviews and collaborated with team members to ensure consistent coding standards and high-quality React.js components.
- Developed application using **Multithreading, Serialization, Externalization, Collections** and **Generics**.
- Developed Rest Controller for mapping requests to generate **Restful APIs**.
- Used **Hibernate** annotation to control data fetching and cascading type and batch size to improve the data

access performance.

- Participated in the optimization of web application performance through efficient use of JavaScript, minimizing load times and enhancing responsiveness.
- Developed business components using **Java8** concepts like **lambda**, date, functional interfaces and classes like Inheritance, Polymorphism, Collections, Serialization and Multithreading.
- Proficient in creating and implementing container-based production clusters, employing technologies such as Docker, Kubernetes, Docker Swarm, OpenShift, and possessing familiarity with Apache Mesos.
- Utilized Azure Monitor and Application Insights for real-time monitoring, logging, and diagnostics of Java applications running on the Azure platform.
- Built relational databases (Oracle) to query and maintain the database.
- Implement JPA repository to access data as DAO.
- Integrated unit testing into the continuous integration (CI) pipeline using tools like Jenkins, ensuring automated testing as part of the build process.
- Utilized the features of **Angular 8** to present effective web design using the angular effects.
- Configured Spring Security to grant permissions for different level resources.
- Implemented DAO layer using **Spring JDBC Template and Hibernate Template API**.
- Established a CI/CD system using Jenkins within Google's Kubernetes container environment. Leveraged Kubernetes and Docker in the runtime environment for building, testing, and deploying within the CI/CD system.

Environment:

Bootstrap4.0, HTML5, CSS3, AWS, Java 1.11, Spring Boot2.1.1, Spring5.x, Spring AOP, IOC, Kibana, Cloud Foundry, Restful, Typescript, Maven, Lambda, Hibernate5.0.2, REST Web service

Client: Deloitte (Remote)

Role: Java Developer

Jan 2019 – Dec 2020

Responsibilities:

- Executed the application development through the **Agile Development methodology**, incorporating daily scrum calls, two-week iterations, user story planning, retrospective meetings, and code reviews.
- Utilized Angular-CLI with webpack for performing builds, generating production-ready code for deployment.
- Worked on spring modules like **Dependency Injection (DI)**, **Aspect Oriented Programming(AOP)** and **Spring JMS**.
- Leveraged Jira reporting features to generate and analyze project metrics, providing valuable insights into team performance and project health.
- Collaborated on the ISO parser tool within Pivotal Cloud Foundry (PCF) and underwent training in Technical Essentials and Architecture with Confidential (AWS).
- Work closely with other Software and Quality Engineers to develop and maintain **UI** and **API** test automation.
- Working with java objects (**DTO**) with database entities to store, maintain and query the data on the oracle database using **SQL** developer.
- Applied Java8 features, including the Streams API, Date Time API, Optional, and Lambda Expressions in the development process.
- Developed Java **SOAP** webservices to expose store procedures and functions.
- Extensively worked on **Hibernate mappings, HQL, Query, Lazy loading Transactions and Locking**.
- Experience in **Hibernate5.0.2** which includes integrating legacy databases, writing custom **CRUD statements**, integrating stored procedures, functions, performed polymorphic associations.
- Deployed and managed Java applications on Linux servers, ensuring optimal performance and reliability in a Linux environment.
- Worked on **Hibernate Relational** mappings like **One-To-Many, Many-To-Many, Many-To-One**.
- Coded web services to expose **Oracle DB Functions** and **Stored procedures** and involved in data migration.
- Implemented application using **Spring Boot, Spring MVC, Spring IOC, Spring Annotations, Spring AOP**.
- Used Spring Annotations to simplify business logic for creating **Spring MVC Restful** web services.
- Used JDBC connection pooling for establishing connecting with the database for better performance of the system.
- Utilized JavaScript for asynchronous programming, making efficient AJAX calls to interact with RESTful APIs and fetch dynamic data for real-time updates.

- Implemented fail safe and **Circuit Breaker Patterns** in **Spring Boot** Micro Service applications using **Hysteric** and monitored the services using **Hysteric** Dashboard.
- Involved in converting **SQL** queries into **Apache Spark** transformations using Apache Spark RDDs and **Scala**.
- Hands-on experience in server-side Java (JEE) and/or **Scala** development.
- Actively contributed to the establishment and maintenance of coding standards and practices, emphasizing the importance of unit testing.
- Implemented REST **Microservices** using **Spring Boot**.
- Involved in automation process through **Jenkins CI and CD**.
- Worked on **Spring Cloud** like **Spring Eureka**, **Cloud Foundry** for **Routing**, **Service-to-Service calls**.
- Designed and developed **Microservices** business components using **Spring Boot**.
- Developed **Angular** functionality in the application to provide two-way binding to the system.
- Worked extensively on various **GCP Services** like **GCE**, **GKE**.
- Used **Postman**, **Rest Client**, **Spring Mock MVC**, **Spring 4JUnit** for testing the web services.
- Implemented **RESTful** Web services to expose and process data.
- Used customized services and directives in **Angular.JS** to develop dynamic and responsive webpages.
- Worked on creating the **Docker Containers**, **Consoles** for managing the application life cycle.
- Used **JIRA** tool for tracking stories progress, follow agile methodology and sprint planning.
- Setup the **Continuous Integration (CI)** and **Continuous Development (CD) process** for the application using the **Docker**, **Maven**.
- Used **GitHub**, **Bitbucket** to maintain the version of the files and took the responsibility to do the code merges.
- Used **Microservice** architecture with **Spring Boot-based services** interacting through a combination of **REST** and **Apache Kafka** message brokers.
- Enhancing existing application for new business requirement using **REST Services** and **MVC & Angular.js**.

Environment:

Java 1.8, Spring Boot, AWS, Spring MVC, Spring4.x, Spring AOP, IOC, Kibana, Cloud Foundry, RESTful, Maven, Lambda, Hibernate5.0.2, REST Webservice, SQL, Oracle12c, GIT, Team City, Log4j, GCP, GKE.
