

# GUVVALA SAITEJA | Software Developer

Location: CA | Phone: +1 669-264-6457 | Email: saitejaguvvala.work@gmail.com | LinkedIn

## SUMMARY:

Software Developer with 5 years of experience building scalable backend systems, AI-driven platforms, and secure cloud solutions across networking, healthcare, and digital engineering domains. Skilled in Python, FastAPI, Flask, Kafka, Spark, MLflow, PostgreSQL, Redis, Kubernetes, and ELK, with a strong focus on real-time data processing, API development, and workflow automation. Known for improving system performance, enhancing data accuracy, and delivering measurable impact while collaborating closely with cross-functional teams including security, DevOps, product, and ML engineering. Proven ability to support enterprise-grade platforms and deliver solutions that align with business and technical goals.

## TECHNICAL SKILLS:

|                                                  |                                                                                                               |
|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| <b>Programming &amp; Core Technologies:</b>      | Python, FastAPI, Flask, SQL, PostgreSQL, Redis, Kafka, Apache Spark, Celery, Elastic Search, Bash             |
| <b>Cloud, Containers &amp; Deployment:</b>       | Docker, Kubernetes, CI/CD (GitHub Actions, Jenkins), Linux Environments                                       |
| <b>Data Engineering &amp; ML Ecosystem:</b>      | Pandas, NumPy, Scikit-learn, MLflow, ETL Pipelines, Feature Engineering                                       |
| <b>System Design &amp; Backend Architecture:</b> | REST API Design, Event-Driven Architecture, Messaging Systems, Caching Strategies, Schema Design              |
| <b>Security &amp; Compliance:</b>                | Zero-Trust Concepts, IAM Practices, Secure API Development, HIPAA-aligned Workflows, Threat-Intel Integration |
| <b>Monitoring, Logging &amp; Observability:</b>  | ELK Stack, Distributed Tracing, Log Analysis, Performance Diagnostics                                         |
| <b>Collaboration &amp; Agile Delivery:</b>       | Cross-Functional Communication, Requirements Analysis, Sprint Planning, Peer Reviews, Documentation           |

## EXPERIENCE:

### Software Developer | Cisco Systems, CA

Feb 2025 - Present

- Enhancing core backend modules for Cisco's cloud-based network analytics platform using Python, improving real-time device telemetry, fault visibility, and operational insights across routers, switches, firewalls, and edge devices.
- Building scalable, low-latency API endpoints with FastAPI, enabling seamless delivery of configuration updates, device-state queries, and security event retrieval for enterprise customers across distributed environments.
- Optimizing high-throughput telemetry pipelines using Kafka, re-architecting consumer groups and partition logic to handle multi-million message streams while boosting processing stability by 27%.
- Automating compliance and configuration drift checks with Python and Redis caching layers, reducing manual operational audits by ~40 hours per month and improving response time for device state lookups.
- Integrating external threat-intel feeds into Cisco's security engine using Elastic search, strengthening anomaly detection and accelerating identification of suspicious traffic behaviors and compromised endpoints.
- Improving the integrity of device and telemetry data by refining schema rules, normalization logic, and validation flows in PostgreSQL, reducing ingestion errors by 19% across multiple tenants.
- Collaborating closely with Zero-Trust architects to embed identity-based access policies, ensuring platform features align with Cisco's enterprise security posture and compliance mandates.
- Working with DevOps teams to deploy micro services on Kubernetes, troubleshooting rollout issues, enhancing service reliability, and ensuring smooth upgrade cycles in multi-cluster environments.

### Software Developer | Cybage Software, India

Aug 2021 - Jun 2024

- Worked across the full lifecycle of an AI-driven analytics platform using Python, enhancing data transformation pipelines, batch/stream workflows, and feature extraction logic for large-scale AdTech and Hi-Tech datasets.
- Designed modular, reusable ML components with Scikit-learn, enabling flexible experimentation, rapid prototyping, and reducing end-to-end model training time by 28% for behavioral prediction use cases.
- Built and optimized FastAPI-based REST services for ML inference, improving latency, adding load-balanced routing, and supporting thousands of daily prediction requests from downstream systems.
- Implemented distributed data ingestion workflows using Apache Spark, improving processing speed across millions of event logs and ensuring reliable ETL operations across diverse structured and semi-structured datasets.
- Added robust experiment tracking and model lifecycle controls via MLflow, enabling version comparison, parameter tracing, production rollbacks, and organized experiment workflows across multiple ML teams.
- Improved dataset quality by developing Python-based anomaly detection, missing-value heuristics, and rule-driven validation, reducing data-related failures by 31% in production pipelines.
- Coordinated with product managers, ML researchers, and DevOps engineers to rescue failing jobs, resolve pipeline bottlenecks, refine business requirements, and successfully roll out new AI features to global digital clients.

**Software Developer | Hexaware Technologies, India****Jun 2020 – Jul 2021**

- Contributed to the development of digital patient-care workflows using Python, building backend logic for onboarding, appointment scheduling, EMR access, and clinical data retrieval for high-volume healthcare systems.
- Engineered secure, HIPAA-aligned REST APIs with Flask and PostgreSQL, ensuring encrypted patient data exchange, faster clinical record lookups, and smooth integration with EHR platforms.
- Automated processing, validation, and standardization of physician notes, lab results, and diagnostic data using Python scripts, reducing data inconsistency rates by ~35% and improving accuracy of clinical reporting.
- Introduced an asynchronous, event-driven messaging workflow using Celery, powering appointment reminders, discharge notifications, and follow-up alerts, leading to a 22% increase in patient engagement.
- Strengthened system observability by implementing structured logs, distributed tracing, and API-level performance diagnostics using the ELK stack, significantly reducing incident root-cause identification time.
- Partnered with QA teams, clinical stakeholders, and product owners to refine digital-care workflows, debug production issues, test new releases, and ensure stable deployments across a multi-hospital environment.

**EDUCATION:****Bachelor of Technology, Bapatla Engineering College| Andhra Pradesh, India****Jun 2015**
