

SATHWIKA MARRI | SOFTWARE ENGINEER

Valparaiso, IN • +1 219-707-7468 • marrisathwika934@gmail.com

PROFESSIONAL SUMMARY

Software Engineer with **3+ years** building, testing, and shipping web and cloud applications across consulting and IT services. Strong with **Java, JavaScript/TypeScript, C#, SQL**, and modern stacks (**Spring Boot, .NET, React, Node**) on **AWS/Azure**. Comfortable owning features end-to-end API design, data modeling, CI/CD, automated testing, and production support while working in **Agile/Scrum/SAFe** teams. Former U.S. Army NCO; brings bias for action, clear communication, and reliability under pressure.

TECHNICAL SKILLS

Languages: Java, JavaScript/TypeScript, C#, Python, SQL

Frameworks: Spring Boot, .NET (ASP.NET Core), React, Node/Express, REST, GraphQL

Cloud/DevOps: AWS (EC2, EKS, S3, RDS), Azure (App Service, AKS, SQL), Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Git

Data: PostgreSQL, SQL Server, MySQL, MongoDB, Redis; ER modeling, query tuning, indexing

Testing/Quality: JUnit, NUnit/xUnit, Jest, Cypress, Selenium, Postman, Pact (contract tests), SonarQube, OWASP

Practices: Domain-driven design, microservices, event-driven architecture, CI/CD, trunk-based development, code review, observability (OpenTelemetry, Prometheus, Grafana)

EXPERIENCE

Grant Thornton — Software Engineer
Dallas, TX

Jul 2025 – Present

- Built and scaled **Spring Boot** microservices exposing REST endpoints used by internal finance apps; reduced average API latency **28%** via caching, pagination, and SQL query optimization.
- Implemented **role-based access** and input validation aligned to **OWASP** guidelines; cut auth-related defects **to near zero** across two quarterly releases.
- Containerized services with **Docker** and deployed to **AWS (EKS, RDS, S3)** via **Terraform** and **GitHub Actions**; standardized pipelines trimmed release times **35%**.
- Added **JUnit + Pact** tests and **Cypress** for UI flows, lifting regression coverage from **48% to 82%** and preventing rollbacks.
- Partnered with product and data teams to define contracts and **event-driven** patterns (SQS/SNS), eliminating brittle cron jobs and improving retry behavior.
- Instrumented **OpenTelemetry** traces and **Prometheus** metrics; mean time to identify incidents dropped from hours to **under 15 minutes**.

3i Infotech — Application Developer

Jan 2022 – Jul 2023

- Built customer-facing modules in **ASP.NET Core/C#** and **SQL Server** for insurance and banking clients; refactored data access to async patterns, raising throughput **22%**.
- Authored **stored procedures**, indexes, and partitioning for high-volume transactions; stabilized nightly batch jobs and cut timeout incidents **by half**.
- Created **REST APIs** and integrated third-party payment/KYC services with robust retry/backoff and idempotency keys, reducing reconciliation issues.
- Automated **NUnit/xUnit** and **Selenium** tests in CI; release regressions dropped **>30%**.
- Stood up dashboards in **Grafana** over application metrics and logs; enabled proactive alerting on error budgets and saturation.
- Collaborated closely with business analysts to translate requirements into epics and acceptance criteria that developers could actually build.

3i Infotech — Software Engineer Intern

Jun 2021 – Dec 20

- Contributed features to an internal **React** tool backed by **Node** and **MySQL**; closed accessibility gaps and simplified form validation.
- Wrote **Postman** collections and **Jest** unit tests; helped document API contracts and error codes for team onboarding.
- Assisted with **SQL** data cleanup and migration scripts; eliminated duplicate records ahead of a minor version release. Participated in sprint planning, daily standups, and demos; incorporated code review feedback to raise code quality.

EDUCATION

Valparaiso University, Valparaiso, IN | **Master of Science in Information Technology**

May 2025

Vignan Institute of Technology and Science, India | **Bachelor of Technology in Computer Science**

July 2023

PROJECTS

Personal: Incident Timeline Service (Java, Spring Boot, PostgreSQL, Docker, AWS Fargate) REST API that ingests events and produces point-in-time service timelines; CI/CD with GitHub Actions; **90%** unit test coverage.
