

Seid Zerihun

Quality Assurance engineer

Tell: 2404236866

Email: seid.zerihun99@gmail.com

Diligent and result oriented software tester 6 years of experience in both Manual and Automation testing seeking opportunities to deploy my skill set corroborated by the strong work ethic harnessed through previous work experience. I make it my personal goal to create the best result for a company and I am constantly striving to learn innovative technologies and look for ways to better myself in this rapidly changing industry.

Professional Summary:

- Extensive experience in developing test plans, test scenarios, test cases, test matrices, test reports, and documentation of manual and automated tests on the waterfall and agile methodologies.
- Prepared and maintained Requirements Traceability Matrix to verify test coverage.
- Expertise in Smoke Testing, Sanity Testing, Integration Testing, Regression Testing, Positive Testing, Negative Testing, durability Testing, Load Testing, Performance and System Testing of client-server and web-based applications using different tools.
- Experienced in performing definition of user functional requirements by translating development and/or maintenance requirements into specifications; creating data file and database designs.
- Experienced in manual and automated testing. Expertise in using automated testing tools such as UFT/QTP (Quick Test Professional), selenium and POSTMAN/Runscope for web service testing.
- Executed automated test scripts to validate test scenarios in the regression suite.
- Assisted business users for core UAT regression testing with the help of DATA Validation.
- Worked extensively on JEE, SOA (Service-oriented Architecture) including SOAP, REST API, Web Services validation.
- Automated test cases for Functional and Regression testing using Selenium Web driver.
- Conducted Performance, Stress and Load testing using java and JMeter
- Tested and validated the database tables using SQL queries and Stored Procedures and performed Data Validation and Data Integration
- Performed the Backend Testing to ensure data consistency on the front end by writing and executing SQL Statements on the database
- Experience in developing and maintaining Test Scripts, analyzing bugs and interacting with development team members in fixing the defects using QC /ALM/JIRA

Technical Proficiency

- Version Control: **GitHub, SVN, TFS**
- Bug Reporting Tools: **Rally/Jira**
- Databases: MS SQL Server, PostgreSQL
- Defect management tool: Jira, Rally, QC/ALM
- Performance tools: JMeter
- Other tools: **Maven**(building tool), **Jenkins**(CI) and **GitHub**(code collaboration)
- Cloud services: AWS, Azure
- Testing software: **Selenium Web driver, UFT, selenium grid, Soap UI, Mocha, Chai, Cypress, playwright**
- Programming Languages: **Java, JavaScript, python, SQL**, visual basics
- Operating Systems: Windows/2000/XP/vista/7/8, Linux
- Web service tools: **Postman, SOAPUI, Rest assured API**

Professional work experience

Client: Codoxo

Position: Quality Assurance Engineer

March 2022 - Present

Responsibilities:

- Actively involved in all phases of software development life (SDLC)
- Participated in sprint planning, daily scrum, and retrospective in agile scrum environment
- Designed and developed test plan, test cases, and automated test scripts
- Performed smoke, functional, integration, system, user acceptance, regression, positive, negative and GUI testing on frauds scope web application
- build and enhanced automated test framework using Cypress and page object models concepts
- Ensure automated script works properly locating using CSS selector, x-path
- Created Cypress projects in command line, and bitbucket repository to manage codes
- Developed test cases and performed integration testing of the combined software modules
- Performed end to end testing considering all interfaces and subsystems for functional and non-functional testing
- Used standard SQL functions and commands to develop SQL queries
- Building cypress framework from scratch, add new tests and connect to CI/CD bitbucket pipeline

Client : NCR

Position: Quality Assurance Engineer

March 2021 - March 2022

Responsibilities :

- Create and maintain automated test cases that ensure comprehensive testing according to system specifications and user stories
- Perform all aspects of verification, including functional, regression, load and system testing as well as documentation review
- Develop logging and reporting of automated test execution and results
- Create detailed test designs, conditions and execute them
- Identify, document, and communicate all issues discovered during test case creation and test execution following documented issues reporting procedures and processes
- General comprehension of the software testing process and methodology from Unit Testing through User Acceptance to include: Functional/Manual, System and Integration, Regression, Automation, Load and Performance and Stress testing
- Develop and maintain automation tests for the features added on the sprint using Playwright

Environment: PostgreSQL, Playwright, javascript, agile methodology

Client: Priority Payments system

Position: Quality Assurance Engineer

Sept 2018 – March 2021

Responsibilities:

- Participate in requirement & design document review sessions to evaluate requirements & design documents from a quality testability standpoint.
- Perform functional, regression and integration testing of web based, POS and mobile applications involved in testing applications of different platforms such as IOS and android devices.
- Execute manual and automated functional testing based on analysis and understanding of the requirements and deploy environment.
- Perform regression tests and validation on new releases on the production environment after each deployment.
- Provide functional and integration testing to insure futures are complete and function as expected
- Created and maintain Test Automation Framework with **Cucumber** and **Selenium WebDriver with JavaScript** for UI automation
- Mocha-chai framework for API automation testing
- Design and develop automated tests using Postman and Runscope for web service/API tests.

- Prepare Test plans and Test Cases based on the functional specifications and requirements.
- Prepare Test scenarios to make sure all parts of features and functionalities are covered.
- Participate in sprint planning, sprint review and retrospective meetings.
- Interact with the development team to resolve technical issues and investigate software faults.
- Execute **SQL** and elastic search queries in the database to conduct data integrity testing by checking the data tables on the server.
- Update managers and QA lead on test report analysis results for various tests.
- Review and ensure that all defects are entered into the defect tracking tool (JIRA)

Environment: JAVA/JavaScript, Selenium, SQL, Mocha, Chai, GitHub, and cucumber.

Bank of Hope, Annandale, VA

Quality Assurance Analyst

June 2016 - July 2018

Responsibilities:

- Set up a testing environment, generate datasets, strategy document, and methodologies
- Frequently update and develop excited test plan documents and share the report with the development team.
- Created various types of scenarios to write down detail test cases and designed detail test steps using Quality Center and Test rail.
- Created test data and preparation of RTM to make the traceability Matrix for requirement and test case coverage.
- Assisted product owner in analyzing and expanding the business requirement
- Assisted business users for core UAT regression testing with the help of DATA Validation.
- Frequently involved in **agile** ceremonies like sprint planning, daily standup, grooming, and sprint demo meetings.
- Implemented API testing using Soap UI for data driven verification form sender and responder files.
- Executed CRUD operations to verify REST endpoints and validate the response JSON/XML file using POSTMAN as a rest client.
- Created automation test scripts for the corresponding test cases using selenium Web driver with java.
- Execute automated scripts for test validation and report bugs using JIRA.
- Pulled data from different servers to prepare test data to do the loan mapping with the production for the validation of Business users test purpose.

Environment: PostgreSQL, selenium, Java, Eclipse, Ms Office suite, agile methodology

Educational background

- B.Sc. Process engineering, Bahir Dar University, Ethiopia

Certificate : Digital craft Full stack boot camp certificate
