Summary

Data Analyst with **5+ years** building and analyzing data across e-commerce, higher education, and enterprise IT services, specializing in pipeline infrastructure (**Snowflake, dbt, Airflow**), forecasting (**Python, XGBoost**), and cross-functional reporting (**SQL, Tableau, Power BI**). Built and maintained large-scale data pipelines processing **10TB+ daily** while applying machine learning to improve promotional demand forecasting and pricing experimentation. Redesigned SLA and defect-tracking dashboards adopted across **six client teams**, and automated reporting workflows that cut manual processing time by up to **30%**. Bridges execution-focused analyst work with advanced statistical training to deliver modern, pipeline- and ML-driven analytics that turn fragmented data into decisions stakeholders can act on.

Skills

Data Analytics & Visualization: Tableau, Power BI, Looker, Excel, PowerPoint, Data Storytelling, KPI Design, Dashboard Automation

Programming & Data Science: Python (pandas, NumPy, scikit-learn, XGBoost, matplotlib, seaborn), R (tidyverse), SQL (MySQL, Snowflake, BigQuery, Redshift)

Data Engineering & Pipelines: dbt, Airflow, ETL/ELT Design, Data Modeling, Data Warehousing, API Integration, CI/CD (Git, GitHub)

Machine Learning & Experimentation: Predictive Modeling, Forecasting, Uplift Modeling, Regression Analysis, Clustering, A/B Testing (t-tests, significance testing), Model Validation (MAE, RMSE, Backtesting)

Cloud & Big Data Platforms: AWS (S3, Lambda), GCP (BigQuery, Cloud SQL), Azure (Data Factory), Snowflake

Data Governance & Collaboration: Data Quality Validation, Metric Standardization, Stakeholder Alignment, Agile Scrum, Jira, Confluence

Professional Experience

Product Data Analyst (Contract) | Instacart | USA

Aug 2025 – Present

Support fulfillment quality and marketplace performance across Instacart's four-sided grocery delivery platform, working at the intersection of data pipeline infrastructure and cross-functional analytics

- Monitored operational fulfillment metrics across delivery zones and dug into routing and slot allocation anomalies through root cause analysis on operational data, helping surface fixes that contributed to a **9% reduction** in cancellations
- Built and maintained data pipelines in **Snowflake, dbt, and Airflow**, staging raw event files via **AWS S3** ahead of ingestion, supporting reliable processing of **10TB+** of daily order data across the fulfillment and pricing domains
- Applied **Python (XGBoost, scikit-learn)** to build and backtest promotional demand forecasting models, validating accuracy through MAE and RMSE benchmarking as part of a broader shift toward AI-assisted forecasting workflows
- Defined new data schemas linking fulfillment and pricing datasets, partnering with Engineering on recurring pricing experiment instrumentation and using **SQL-based A/B testing** to translate results into actionable recommendations
- Presented data-driven insights and recommendations to cross-functional stakeholders across Product, Engineering, and Operations on a **weekly review cadence**, using data storytelling to support source-of-truth dashboarding
- Maintained version control and CI/CD hygiene for pipeline code using **Git**, working within an Agile sprint structure alongside PMs and Data Engineers to keep analytics priorities aligned

Instructional Assistant (Analyst) | Clark University | USA

Jan 2025 – Jul 2025

Supported institutional analytics for student performance and academic assessment while completing an MS in Data Analytics, working alongside faculty and academic staff on data-informed decision making

- Streamlined grading and reporting workflows for **2,000+ student records** by automating repetitive data-entry and validation steps in **Python** and **Excel**, cutting manual turnaround time and freeing up faculty capacity
- Developed equity-focused performance dashboards in **Power BI**, giving faculty earlier visibility into at-risk student trends before end-of-term outcomes were finalized
- Validated assessment design using statistical methods, including z-scores, variance, and correlation analysis, to confirm that assessment questions were actually measuring their intended learning outcomes
- Partnered with faculty to translate learning outcome data into pacing adjustments across supported course sections, contributing to an **8% lift** in average course performance
- Supported budget and resource forecasting across recurring departmental planning cycles, helping tighten allocation accuracy through more consistent underlying data
- Maintained consistent data-quality standards across grading and assessment reporting pipelines to ensure accuracy held up to institutional scrutiny and review

Data Analyst | TCS | India

Jun 2020 – Nov 2023

Delivered data analytics and quality reporting for enterprise client accounts within TCS's IT services and consulting practice, working across QA, Engineering, and client stakeholder teams

- Consolidated fragmented SLA and defect-tracking views into a unified **Tableau** dashboard suite that QA and Engineering could actually use together, driving adoption across **six client teams** for shared sprint reporting
- Engineered **SQL-based** automation to process **100K+ issue logs** every month, cutting manual reporting cycles by **30%** and freeing analyst time for deeper trend investigation
- Mined defect and incident trends using **Python (pandas, matplotlib)**, applying root cause analysis techniques that contributed to a **15% drop** in repeat issues over time
- Standardized data extraction and reconciliation across varied client source systems, including **AWS S3** and **BigQuery**, reducing inconsistencies in cross-project reporting
- Built a KPI framework for release quality and tied it directly into **Jira** and **Confluence**, giving distributed teams a shared, consistent language for measuring sprint performance
- Delivered defect analysis and sprint findings directly to client stakeholders on a recurring cadence, translating technical patterns into concrete backlog and roadmap recommendations
- Coached two junior analysts on SQL query optimization and dashboard design fundamentals, contributing to a measurable lift in their output quality over time

Education

Master of Science in Data Analytics | Clark University | Worcester, Massachusetts, USA (GPA: 3.78/4)

Dec 2025
