

Shila Bhandari

Phone: 469-844-3782

Email: bhandarishila804@gmail.com

Professional Summary:

- 5+ years of experience working as a **Java /J2EE** developer in **designing, developing, deploying, and maintaining web-based, client/server applications along with Enterprise and Distributed applications.**
- Hands-on experience in developing applications using various Front-End frameworks like **Angular, React, JQuery, HTML5, CSS.**
- Expertise in Java programming and have good understanding on **OOPs, Collections, Exceptions Handling, Input/output (I/O) System, Annotations, Concurrency, Multi-Threading, Lambda and Generics.**
- Expert level experience with Web based Application design & development using Java/ J2EE Technologies like **JSP, JSF and JMS.**
- Experience on Object Oriented Design Patterns such as **Singleton Pattern, MVC Pattern, Factory Pattern, Façade Pattern and DAO Pattern.**
- Good experience working with **Java 1.8** for implementing the new features like **Lambda Expressions, Streams, Java Time API.**
- Good experience in various modules of Spring framework like **Spring IOC, Spring MVC, Spring Batch, Spring ORM, Transaction Management, Spring Security and Spring Boot, Spring Data.**
- Expertise in implementing the persistence logic using **JDBC, JPA, Spring JDBC, Hibernate framework.**
- Extensively worked on **Micro Services** using **Spring Boot, Spring Data and REST**
- Expertise in implementing Service Oriented Architecture by using **RESTful** web services.
- Worked with Jersey API to implement **RESTful** web services, strong knowledge on JAX-RS annotations.
- Hands-on experience in Amazon Web Services (AWS), services like **EC2, S3, ELB** (Load Balancers), **RDS, Cloud Watch, Auto-Scaling using Cloud Formation** etc.
- Experience with AWS Cloud formation and launch configurations to automate repeatable provisioning of AWS resources for applications.
- Deep hands-on experience on building scalable web service architectures with various relational databases like **MySQL, Oracle DB.**
- Having knowledge on **NoSQL** databases like **MongoDB, Neo4J and Cassandra.**
- Experience with messaging systems like **Kafka, Kafka event sourcing, ActiveMQ and RabbitMQ.**
- Experience in creating and handling real time data streaming solutions and handling messaging services using Apache Kafka.
- Experience in configuring and deploying Web Applications using **IBM WebSphere server, JBoss, Tomcat server and Apache.**
- Experience in using IDE tools like **Eclipse, NetBeans, IntelliJ IDEA**
- Experience in using **Ant, Maven, Gradle** build tools.
- Used **JUnit** Framework to perform Unit testing of the application.
- Performed unit and integration test by writing **JUnit** test cases using Junit Frameworks like **Mockito.**
- Good experience working with **Continuous Integration and Deployment (CI/CD)** tools like **Jenkins, Docker.**

Educational Details:

Bachelor's in Computer Science

Tribhuvan University, Kathmandu, Nepal (May 2016)

Technical Skills:

Languages	Java 8, Java/J2EE, C++, JDBC, JavaScripts, SQL and PL/SQL
Mark-up/XML Technologies	HTML, CSS, JavaScript, JQuery, AJAX, AngularJS, Bootstrap, XML, XSD, XSL/XSLT, SAX/DOM, JSON.
Tools & Framework	Struts, Spring, Hibernate, Spring MVC, Spring IOC, Spring AOP, Spring Boot, JUnit, SOAP UI, ANT, Maven, Jenkins, Apache Active MQ
Web services	SOAP, Restful, Micro services, AWS (Amazon Web Services).
Web/App Servers	Apache Tomcat, JBoss, Web Logic Server
Database	Oracle, SQL-Server, MySQL server, MongoDB
IDEs	Eclipse, IntelliJ, Spring Tool Suite(STS)
Design Patterns	MVC, Factory, Singleton, and DAO patterns
Testing Tools/ Others	JUnit, Soap UI, Postman
Build Tools	Maven, Gradle
Version Control	Tortoise SVN, Git, GitHub.
OS & Environment	Windows, Mac, UNIX, Linux.

Professional Experience:

Church Mutual Insurance, Merril, WI

April 2021 – Till date

Role: Full Stack Java Developer

Responsibilities:

- Involved in design, development and testing of software development life cycle
- Responsible for requirement gathering from the Business Analysts and for preparing the **API specification document**.
- Implemented **Spring Boot Microservices** to divide the application into various sub modules using **Spring Data Rest**.
- Using the Microservices architecture, introduced **Restful Web Services** to access data from the client side.
- Involved in developing code for obtaining bean references in spring framework using **Dependency Injection (DI)** or **Inversion of Control (IOC)** using annotations. This functionality is implemented by developing **RESTFUL** web services using spring boot
- Implemented **Authentication & Authorization** with **Spring Security**.
- Used Java 1.8 features like **stream**, **lambda expressions**, **functional interface**, **collections**, **Date/Time** changes and type annotations.

- Developed **Angular services, controllers** and created models for two-way databinding and worked on **Angular 6/8 frameworks**.
- Designed user Interface using **Angular UI** components such as tabs, grids, dropdowns and configured the routing service using **Angular router**.
- Worked on NoSQL databases like **MongoDB and Cassandra** where data storage was scaled rapidly.
- Strong Database design and development experience, which includes developing **Stored Procedures**, functions using **SQL**.
- Implemented **Kafka producer** and **consumer** applications on **Kafka** cluster setup with help of **Zookeeper**.
- Used **Apache Kafka** for distributed publish-subscribe messaging system that is for alerting and reporting on operational metrics to **Kafka producers and consumers**.
- Used **Elasticsearch** for powering **search, logging and monitoring** systems end to end.
- Wrote **Docker** files for **microservices**, also dockerized testing environment for those services.
- Used **Jenkins** pipelines to drive all micro services builds out to the **Docker registry** and then deployed to **Kubernetes**, created Pods, and managed using **Kubernetes**.
- Developed **Git** controls to track and maintain the different versions of the project.
- Extensively used **log4j** to log regular debug and exception statements.

Environment: Java, J2EE, Hibernate 4.3, Spring, Spring Boot, Micro Services, Angular, HTML, CSS, Java Script, REST Web Services, MongoDB, ELK Stack, Kafka, Docker, Kubernetes, AWS S3, RDS, MySQL , Maven, JUnit, JMS, Jenkins, JIRA, Git.

Scripps, San Diego, CA

July 2019 – March 2021

Role: Java Developer

Responsibilities:

- Followed agile software development practice paired programming, test driven development and scrum status meetings
- Configured local Maven repositories and multi-component Ant projects with Nexus repositories and scheduled projects in **Jenkins** for continuous **integration/continuous deployment(CI/CD)**.
- Worked extensively on Spring boot for building web services
- Designed and implemented **Spring-Security** for the application for authentication process.
- Involved in designing and implementation of **MVC** design pattern using spring framework for Web-tier
- Implementation of **Spring Restful** web services which produces JSON
- Implemented the business logic using **Java, Spring Boot, Spring MVC , Restful API, Spring DataJPA**.
- Used Spring Declarative Transaction Management to manage request transactions.
- Spring batch jobs built for importing XML data into the database and for email alerts.
- Developed applications in Java based UI within **Angular 2.0** framework and **Node.js**, integrated with **Typescript**
- Used JavaScript, jQuery for user interactions in pages. Creating a responsive web application integrating Twitter Bootstrap with Angular 4.0 and media queries
- Expert in using Angular 2 as main front-end framework using features like **components, pipes, modules, custom directives, templates, data binding, dependency injection, routing** and **Angular CLI**
- Worked on creating various types of indexes on different collections to get good performance in **Mongo** database
- Writes **SQL** scripts and builds underlying storage tables with dynamic business processes. Participated in the use of web-services utilizing **SOAP**, which enabled the business application to be merged with the legacy applications and encouraged potential applications.
- Configured Kafka to read and write messages from external programs.

- Developed API for using **AWS Lambda** to manage the servers and run the code in AWS
- Selecting the appropriate **AWS service** based on compute, data, or security requirements
- Experience in Integration of Amazon Web Services **AWS** with other applications infrastructure
- Used **Microservices** to communicate using synchronous protocols **HTTP** and **REST** for implementing **SOA** approach
- Implemented **Multithreading, Concurrency, Exception Handling, Generics and Collections** whenever necessary.
- Used **GIT** for version control for maintaining files in repositories.
- Used **log4j** to log regular debug and obtained output without any errors.

Environment: Java/J2EE, Spring 3.5, Spring MVC, Spring Security, Hibernate 4.0, Rest, JSP, HTML, CSS, Java Script, OpenShift, Cassandra, RabbitMQ, Datadog, Junit, Mockito, Gradle.

EPAM Systems, NYC, NY

October 2017 – June 2019

Role: Java Developer

Responsibilities:

- Involved in complete software development life cycle with object-oriented approach of client's business process and continuous client feedback. Worked on designing and developing a complete service-oriented system based on **SOA** principles and architecture in an agile development environment.
- Employed Agile Model and best practices for software development.
- Involved in developing the **CSS** sheets for the UI Components.
- Developed web-based application using spring framework for **MVC** architecture.
- Setting up the basic project set-up from scratch of Spring-Hibernate App based on Design.
- Used **Spring Framework AOP** Module to implement logging in the application to know the application status. Used **Spring DAO** Module along with Hibernate Framework to deal with Database.
- **Spring MVC Framework IOC** (Inversion of Control) design pattern is used to have relationships between application components. It is also used to separate the application configuration and dependency specification from the actual application code.
- Extensively worked on JPA as persistence layer, involving Hibernate to persist the Java objects as Entities in the database.
- Involved in development of REST Web Services using **SPRING MVC** to extract client related data from databases and **SOAPUI** tool is used for testing **RESTFUL API** web services.
- Familiarity with Service oriented architecture (SOA) by developing and consuming Restful web services based on Jersey.
- Wrote corresponding one-one REST methods to implement respective change requests (change appliers)
- Tested **REST** services using google chrome's **POSTMAN** plugin.
- Deployed the application in **JBoss** Application Server.
- Worked on Junit for creating test cases for all the Business Rules and the application code.
- Called external vendor applications using Web Services for delivering notifications.

Environment: HTML, jQuery, JavaScript, Apache, Servlets, Spring 3.2, Hibernate 3.5, Spring MVC, SOA, RESTful, Junit, Web Services, Junit, Agile.
