

Shivani Jilukara

+1 (737) 340-8010 | jilukara.shivani.19@gmail.com | [LinkedIn](#)

Backend-leaning full-stack Software Engineer with 4+ years of experience designing and owning RESTful APIs, relational data models, and service-oriented architectures across Python (Django, FastAPI), React, and TypeScript in AWS and Azure environments. Skilled at translating ambiguous requirements into technical designs, owning features end to end, and collaborating across engineering, product, and business stakeholders.

EXPERIENCE

Software Developer – T-Mobile

Jan 2026 – Present

- Own the design and delivery of RESTful APIs and service modules using Python, FastAPI, and PostgreSQL, defining data models, query patterns, and service boundaries for transactional workloads relied on by multiple operational teams.
- Partner with backend engineers, product, and business stakeholders in Agile Scrum ceremonies to convert ambiguous feature requirements into clear API contracts and technical designs, applying data-informed judgment to prioritize work by business impact.
- Write and optimize SQL queries, relational schemas, and validation logic to improve response times, data reliability, and scalability of high-traffic endpoints running in a distributed AWS (EC2, S3) environment.
- Drive source control, release, and CI/CD practices with Git, GitHub, GitHub Actions, and Docker, establishing code review and pull-request standards adopted across the team.

Software Developer – Revive Software Systems Inc.

Feb 2025 – Dec 2025

- Built full-stack product features end to end using Python (Django, Django REST Framework), React.js, and TypeScript, designing secure, service-oriented REST APIs with authentication and request validation against PostgreSQL across multiple product modules.
- Developed reusable, responsive React components using React Hooks and modern JavaScript (ES6+), improving UI performance and consistency across the application's front-end surfaces.
- Collaborated with product, design, and engineering stakeholders to scope API and UI changes, taking ownership of feature tradeoffs and iterating based on usage patterns and stakeholder feedback.
- Deployed and operated services on Microsoft Azure using Git, GitHub, Docker, and GitHub Actions, automating build validation, integration testing, and production release pipelines.

Graduate Assistant – Texas A&M University

Mar 2023 – Dec 2024

- Built and enhanced a faculty management web application using React.js, TypeScript, Python, and REST APIs backed by a relational SQL database, owning scalable features for managing faculty records and academic data.
- Refactored legacy modules into reusable, object-oriented components and streamlined API communication and state management, improving front-end performance, maintainability, and overall system design.
- Partnered directly with faculty stakeholders using Git, Postman, and Agile Scrum practices to clarify ambiguous requirements, validate functionality, and ship iterative improvements to production.

Application Development Associate – Accenture

Dec 2021 – Dec 2022

- Built responsive business applications with React.js, JavaScript, HTML5, and CSS3, integrating REST APIs to surface real-time business data and improve the end-user experience.
- Developed reusable, object-oriented UI components following software engineering best practices, using Git for version control within cross-functional Agile Scrum teams.
- Partnered with QA analysts and business stakeholders to analyze requirements, troubleshoot issues, and validate functionality, delivering reliable releases through structured, iterative problem-solving.

PROJECTS

- **FileStack Application** (Feb 2025) – Secure file management app built with Python, TypeScript, and PostgreSQL, implementing authentication, relational data modeling, and a responsive UI on a service-oriented REST API layer.
- **Campus Companion** (Feb 2024 – Apr 2024) – Student management application for academic planning and GPA tracking using Spring Boot REST APIs, React, and MySQL, applying OOP principles and relational database design.

EDUCATION

Texas A&M University

Master of Science in Computer Science – GPA: 3.8

TECHNICAL SKILLS

Backend & APIs: Python (Django, Django REST Framework), FastAPI, REST API Design, Service-Oriented Architecture, OOP, JSON

Databases: PostgreSQL, MySQL, Relational Data Modeling, SQL Querying, Transactional Data Modeling, Relational Database Design

Frontend Development: React.js, React Hooks, TypeScript, JavaScript (ES6+), HTML5, CSS3, Responsive Web Design, Component-Based Architecture

Cloud & DevOps: AWS (EC2, S3), Microsoft Azure, Docker, GitHub Actions, CI/CD Pipelines, Distributed Systems

Version Control: Git, GitHub, Branching, Pull Requests, Code Review

Testing & Tools: Postman, Jest, React Testing Library, Debugging

Methodologies: Agile Scrum, SDLC, Technical Design & Documentation, Cross-Functional Collaboration, Metrics-Driven Iteration
