SUMMARY

Data Engineer and Analyst with 2+ years of experience building and optimizing Azure Data Factory pipelines, transforming data using Python and SQL, and delivering insights through Power BI, Tableau, and Excel. Skilled in ETL optimization, automation, incident handling, and cross-team collaboration, with a focus on creating reliable, scalable data solutions that strengthen reporting, analytics, and decision-making.

SKILLS

- **Programming & Data Processing:** Python, SQL, Azure Logic Apps Automation, Data Cleaning, Data Transformation
- **Data Engineering & Infrastructure:** Azure Data Factory, Azure Analysis Services, Azure Virtual Machines, Azure Storage, ETL Development & Optimization, Data Ingestion & Orchestration, RabbitMQ, Data Validation, Query Optimization
- **Databases & Analytics:** MS SQL Server, Relational Data Modeling, SQL Server Data Marts, Power BI, Tableau, Advanced Excel, KPI Development, Exploratory Data Analysis
- **DevOps & Collaboration:** Pipeline Monitoring, Alert Automation, Incident Management, Release Support, On-call Operations, Git, JIRA, Requirements Analysis, Technical Documentation, Cross-team Collaboration

EXPERIENCE

Data Science Intern | Sports Media Inc.

August 2025 – Present | Colorado, USA

- Built an end-to-end analytics project to identify the best youth sports for an educational cartoon series using multi-source public datasets (Google Trends, YouTube Kids engagement, and youth sports participation reports).
- Cleaned, transformed, and modeled data in Python and Power BI; engineered features including participation growth, normalized search interest, and engagement rate across 7 sports.
- Developed a scoring model combining participation trends, digital engagement, and search behavior to objectively rank sports and guide content strategy decisions.
- Designed 2 interactive Power BI dashboards highlighting youth engagement insights, search patterns, and a data supported recommendation of basketball, soccer, and volleyball as top sports for cartoon content.
- Created character concept profiles and storyline ideas driven by insights from the analysis, demonstrating analytics applied to media planning and audience engagement strategy.

Software Engineer | Gap Inc.

June 2022 – Dec 2023 | Client Location: San Francisco, CA

- **Plan Reporting - Data Engineering**
- Supported large-scale reporting pipelines by developing and maintaining Azure Data Factory workflows, improving pipeline stability and reducing recurring failures by about 20 percent.
- Added 15 new business attributes across ingestion and transformation layers while ensuring proper mapping, validation, and smooth integration into DataMart workflows.
- Optimized ETL logic in ADF by refining dependencies and sequencing, leading to faster runtimes and improved data availability for analytics teams.
- Automated pipeline monitoring using Azure Logic Apps that delivered activity reports and error alerts to Teams and Slack, reducing manual checks by 5+ hours per week.
- Automated weekend pipeline schedules and maintained Azure Virtual Machines, reducing unnecessary compute usage and manual support efforts during off-hours.
- Enhanced .NET-based integrator services that supported data ingestion, validation, and orchestration across environments.
- Collaborated with BI and DataMart teams on schema updates and data validation, ensuring consistent reporting outputs.
- Performed on-call DevOps tasks including pipeline monitoring, triaging incidents, managing JIRA tickets, and coordinating production deployments.
- Contributed to cloud cost optimization initiatives that helped the Plan Reporting team earn recognition for excellence in cost management.

Software Intern | Simplify Workforce Pvt Ltd.

August 2021 - April 2022 | Remote

- Analyzed existing web application workflows and features to understand functional requirements, helping the team document end-to-end process logic for future enhancements and system integrations.
- Collaborated with product managers and engineers to gather and refine requirements, translating business needs into structured documentation that improved development clarity and reduced rework.
- Assisted in creating and refining UI components for the internal application, ensuring alignment with functional requirements while improving usability and consistency for end users.
- Performed detailed functional testing and validation of new features, identifying defects, edge cases, and data inconsistencies, and documenting findings to support engineering and QA teams.
- Prepared technical documentation by mapping data inputs, user interactions, and system behavior, enabling clearer understanding of workflows across teams.

- Supported cross-team communication by summarizing analysis findings, organizing requirements, and assisting with release documentation and user guides.

EDUCATION

Masters in Computer Science | Oregon State University

Coursework: Database Management Systems, Deep learning, Data Analysis

Jan 2024 – June 2025 | Corvallis, OR

GPA: 3.62/4.00

Bachelors in Computer Science | CVR College of Engineering

Coursework: Machine Learning, Database Management Systems

August 2018 – May 2022 | India

CGPA: 8.46/10

PROJECTS

British Airways Review Dashboard

[Tableau Public Link](#)

- Created an interactive Tableau dashboard to analyze customer sentiment from 15,000+ British Airways reviews.
- Cleaned and modeled data to visualize rating trends, sentiment by location, and overall satisfaction.
- Used filters, KPIs, and custom charts to enable dynamic insights

Real-Time Road Damage Detection Using YOLOv8

Oregon State University | 2025

- Designed a deep learning system using YOLOv8 to detect road damage, processing over 47,000 images.
- Built data preprocessing pipelines with Python, Pandas, and NumPy, achieving 60.06% test accuracy.
- Technologies: YOLOv8, Python, Pandas, NumPy, Matplotlib.

Spam Email Detection System

CVR College of Engineering | 2021

- Built a spam detection machine learning model using Python and Scikit-learn.
- Focused on text preprocessing, feature extraction, and classification to accurately predict spam emails.
- Technologies: Python, Scikit-learn
