SUMMARY

Backend-focused Software Engineer with experience building Java and Spring Boot services, REST APIs, and database-backed systems. Developed scalable backend features, optimized data pipelines, and collaborated cross-functionally to deliver reliable, maintainable software. Strong interest in data-driven and healthcare-focused systems, with a growth mindset and eagerness to learn distributed backend technologies.

EDUCATION

Ball State University

Bachelor's in Computer Science, Concentration in Data Analytics & ML

Muncie, IN

Expected May 2026

EXPERIENCE

Software Developer Intern (Client Project)

May 2025 – July 2025

Play By Play – Sports Prediction App

Muncie, IN

- Implemented core gameplay logic and backend data pipelines across Solo, Group, and Studio modes, contributing to **10+ production features**.
- Optimized Firebase queries, filtering pipelines, and caching strategies, improving backend responsiveness by **30–50%**.
- Collaborated with developers through Git workflows and CI pipelines while supporting **150+ beta users** across mobile and web platforms.

Teaching Assistant — Design and Analysis of Algorithms

Aug 2025 – Present

Ball State University

Muncie, IN

- Mentored **70+ students** implementing and optimizing algorithms in Java, including recursion, dynamic programming, and graph traversal.
- Designed and graded **65+ labs and assignments**, emphasizing correctness, efficiency, and clean code.

Undergraduate Research Assistant — Backend & Web Systems

Aug 2025 – Present

Center for Business and Economic Research (CBER)

Muncie, IN

- Maintained backend and web components across **10+ deployed sites**, resolving production issues related to APIs, caching, and data pipelines.
- Integrated external datasets and deployed versioned releases using Git-based workflows.

PROJECTS

Opportune – Job Application Platform | *Java, Spring Boot, PostgreSQL, Redis, AWS, Docker, React*

- Developed **Java-based REST APIs** for authentication, job-tracking workflows, and organization-level tools using Spring Security, JWT, and JPA.
- Designed and optimized PostgreSQL schemas with Flyway migrations, improving query performance by **40%**.
- Implemented **Redis caching** for search and session data to reduce database load under concurrent access.
- Built secure resume upload pipelines using AWS S3 signed URLs and asynchronous processing. Built UI components and dashboards in **React** with reusable components, protected routes, and API integration.
- Wrote unit and integration tests using JUnit, Mockito, and TestContainers; documented APIs with Swagger/OpenAPI.

MovieMood – Mobile Movie Discovery App | *React Native, TypeScript*

- Built cross-platform mobile application features using React Native and TypeScript.
- Implemented authentication, watchlists, and reusable UI components with clean state management.

TECHNICAL SKILLS

Java Backend: Java, Spring Boot, Spring Security, JPA/Hibernate, JWT, REST APIs, Maven, Swagger/OpenAPI, JUnit, Mockito, TestContainers

Databases: PostgreSQL, Redis, SQL, Flyway

Cloud / DevOps: Docker, AWS (S3, EC2, RDS), GitHub Actions, CI/CD, asynchronous processing

Frontend & Mobile: React, React Native, TypeScript, Tailwind **Tools:** Git/GitHub, Postman, Firebase, Appwrite
