EDUCATION

- International Institute of Information Technology** Bhubaneswar, Odhisa
Bachelor of Technology - Information Technology; GPA: 8.05 Aug 2019 - Aug 2023
Courses: Operating Systems, Data Structures, Analysis Of Algorithms, Computer Architecture, Networking, Databases

SKILLS SUMMARY

- Languages:** C++, JavaScript, Typescript, SQL, Python
- Frameworks & Libraries:** React, React Native, Next, NodeJS, Express, MongoDB
- Tools & Platforms:** Git, Vercel, AWS, MySQL, SQLite, RabbitMQ
- AI & LLMs:** Prompt Engineering, OpenAI APIs, LangChain (basic), LLM integration
- Soft Skills:** Leadership, Mentorship

EXPERIENCE

- Samwell.AI** Remote
Full Stack Enginner (Contract) April 2025 - present
 - Developed the **AI Tutor** module — a personalized learning system that generates full-fledged course plans based on user-defined goals, topics, and education level.
 - Engineered dynamic roadmaps and modular study plans including notes, checkpoint questions, and interactive quizzes to support progressive learning.
 - Integrated a smart chat assistant that clarifies user doubts and acts as an on-demand tutor throughout the learning journey.
- VE.AI (formerly Huemn)** Hyderabad, Telangana
Software Engineer July 2023 - April 2025
 - Led and built **ve.ai** from scratch to MVP stage — an All in one AI platform capable of replacing multiple traditional SaaS products.
 - Architected and developed key features including:
 - An AI wrapper layer providing complete ChatGPT capabilities on top of our microservice-based automation engine.
 - Voice integration enabling users to perform operations through natural language (chat/voice).
 - An AI-driven workflow builder allowing users to visually design automation flows and custom triggers using modular nodes.
 - Notion-style task and notes management, AI-assisted calendar, AI web page builder and several other AI productivity tools.
 - Developed VE, a cross platform mobile app that replicates all the features of our main SaaS application (app.huemn.com), enabling users to conveniently access and use the platform on their phones. This innovation eliminates the need for large screens and currently serves approximately 1,200 users.
 - Developed various dashboards and Android, iOS, and PWA applications based on business requirements, automating multiple business workflows to enhance efficiency and streamline operations.
- Propelld** Bangalore, Karnataka
Software Engineer Intern Jan 2023 - July 2023
 - Revamped the Redux architecture, boosting app performance by 8% and enhancing overall efficiency.
 - Engineered an innovative micro-service for data-driven report generation, empowering the sales team to target potential users more effectively, resulting in a 15% increase in sales..
 - Significantly enhanced the loan allocation process and implemented a feature to clearly state the reason for loan request rejections, which helped the operations team quickly identify and resolve issues, improving overall efficiency.
 - Developed complete WhatsApp chatbot architecture and backend using Gupshup, enabling rapid user application generation in minutes and accelerating the loan journey.
- Relevel By Unacademy** Remote
Full Stack Course Instructor May 2022 - Jan 2023
 - In my capacity as an instructor, I've had the privilege of shepherding more than 300 students on a journey through the intricate realms of data structures, algorithms, and full-stack development
 - Through a blend of structured lessons and interactive problem-solving sessions, I've cultivated an environment that nurtures curiosity and practical exploration. By facilitating regular doubt-clearing sessions, I've empowered students to confront challenges head-on, master intricate concepts, and emerge as adept software developers poised to make meaningful contributions to the tech landscape
