

Shubham Sunil Jain

Location: NJ, USA | Mobile: 801-210-1548 | Email: shubhamsjain143@gmail.com

SUMMARY:

Python Developer and Data Engineer with Around 7 years of experience building scalable ETL/ELT pipelines, RESTful APIs, and cloud-based applications using Python, AWS, and tools like Snowflake and Airflow. Successfully optimized system performance, reduced deployment times by up to 70%, and enhanced data pipeline efficiency by 30%. Skilled in Agile methodologies, CI/CD workflows, and cloud infrastructure management, delivering high-quality, business-aligned IT solutions. Key achievements include cutting data processing costs by 40% and improving BI reporting speed by 35%. Proficient in Python (Pandas, PySpark, Flask, Django), AWS, Terraform, and Git, focusing on maintainable code and operational efficiency.

SKILLS:

Programming Languages: Python (Pandas, NumPy, PySpark, Flask, Django), SQL, Java, Bash
Data Engineering: ETL/ELT Pipelines, Data Warehousing (Snowflake, Redshift, BigQuery), Apache Airflow, Apache Kafka
Cloud Platforms: AWS (S3, Lambda, Glue, Redshift, Athena), Azure (Data Factory, Databricks), Google Cloud Platform
Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Oracle
Big Data Tools: Hadoop, Hive, HDFS, Databricks
Data Visualization: Tableau, Power BI, Matplotlib, Seaborn
DevOps & CI/CD: Docker, Kubernetes, Jenkins, Git, Terraform
Machine Learning: Scikit-learn, TensorFlow, Feature Engineering, Model Deployment
Other Tools: RESTful APIs, GitHub, Jira, Agile/Scrum Methodologies
Soft Skills: Problem-Solving, Team Collaboration, Communication, Time Management

EDUCATION:

Master of Science Computer Engineering University of Florida, Gainesville, Florida	May 2023
Bachelors in Electronics and Communication Engineering B V Bhoomaraddi College of Engineering & Technology, India	May 2016

EXPERIENCE:

Tata Consultancy Services, USA | Aug 2023 – Current | Python Developer

- Developed high-quality code adhering to best practices and established coding standards, ensuring robust and maintainable Python applications.
- Designed and built robust IT solutions to address core business functions, delivering scalable and efficient systems.
- Debugged existing codebases to identify and resolve issues, ensuring optimal functionality and performance.
- Developed technically sound solutions for complex challenges, maximizing the value of IT investments.
- Coordinated with offshore development teams to set priorities, manage project scope, and ensure timely delivery of projects.
- Developed data migration and system integration strategies to ensure seamless data flow and optimized system interactions.
- Leveraged AWS services to design, deploy, and manage over 10 scalable and reliable cloud applications, achieving 99.9% uptime and reducing infrastructure costs by 20% through optimization strategies.
- Leveraged AWS tools for CI/CD to enhance development workflows, enabling faster and more reliable deployments.
- Monitored and managed AWS infrastructure to ensure high availability and optimal application performance.
- Designed and implemented Azure Data Engineering solutions, utilizing Azure Data Factory, Azure Databricks, and Azure Synapse Analytics to build scalable data pipelines, achieving a 30% efficiency improvement in data processing workflows.
- Optimized data integration and ETL processes on Azure, ensuring seamless data transformation and storage for business intelligence and analytics.
- Collaborated with cross-functional teams to integrate Azure-based data solutions with existing systems, enhancing data accessibility and usability.

Virtual Infotech Solution, India | Oct 2020 – July 2021 | Python Developer & Data Engineer

- Designed and implemented scalable ETL/ELT pipelines using Python (Pandas, PySpark) and Apache Airflow, processing over 10TB of data daily, improving data pipeline efficiency by 30% for real-time analytics on AWS (S3, Glue, Redshift).
- Developed and deployed RESTful APIs using Flask and Django, integrating with PostgreSQL and MongoDB databases, enabling seamless data access for cross-functional teams and reducing API response time by 25%.
- Orchestrated data workflows on AWS and Azure (Data Factory, Databricks), migrating legacy Hadoop-based systems to cloud-native solutions, achieving a 40% reduction in data processing costs.
- Built and optimized data warehousing solutions on Snowflake and BigQuery, implementing complex SQL queries and data models to support business intelligence dashboards in Tableau and Power BI, enhancing reporting speed by 35%.
- Leveraged Docker and Kubernetes for containerized deployment of machine learning models (Scikit-learn, TensorFlow), enabling scalable model serving on AWS Lambda, which improved prediction turnaround time by 20%.
- Automated infrastructure provisioning using Terraform and set up CI/CD pipelines with Jenkins and Git, reducing deployment time by 50% and ensuring consistent environments across development and production.
- Collaborated in Agile/Scrum teams, utilizing Jira for task management and GitHub for version control, delivering high-quality data engineering solutions under tight deadlines, contributing to a 15% increase in team productivity.

Gowma Non-Leather Pvt. Ltd, India | July 2016 - Sep 2020 | Python Developer

- Used Agile methodology throughout the project and managed weekly and daily releases.
- Created customized development frameworks for customers based on specific business goals and budgetary constraints for the developers.
- Developed and implemented workflow templates, prioritizing efficiency and ease of use for end-users of a software project.
- Designed and configured database and backend applications and programs, contributing to operations continuity and increasing efficiency by 14%.
- Proactively monitor system performance to identify and resolve issues during deployment. This ensures new systems function optimally and delivers the expected benefits to the organization.
- Worked on selecting the new systems and software initiatives.
- Collaborated with upper management to drive strategy and implement new processes.
- Involve in designing and deploying a multitude of applications utilizing almost all the AWS stack, including EC2, S3, VPC, IAM, Load Balancer, and Cloud Watch
- Consolidated and refactored the legacy program module of an external app, improved code maintainability, and cut deployment time by 70%
- Used GitHub for source code version control.
