SUMMARY

Software Developer with **3+** years of experience and a Master's degree in Computer Science. Building full-stack applications using React, Node.js, Python, and Java, with strong RESTful API and microservices experience. Brings hands-on expertise in AWS cloud deployments, Docker, and LLM-based architectures using AWS Bedrock and RAG pipelines. A strong communicator who thrives in agile, cross-functional teams.

PROFESSIONAL EXPERIENCE

Charles Schwab - Software Engineer (Contract), San Francisco, CA

May 2026 - Present

- Contributing to **Java Spring Boot** microservices and **PostgreSQL**-backed **REST APIs** supporting investment research applications, assisting with backend performance tuning and **SQL** query optimization that improved API response times by approximately 8–12% for targeted service endpoints.
- Developing automated test suites and backend validation tooling using **JUnit** and **Mockito**, leveraging **Claude Code** to accelerate debugging, test generation, and code reviews while improving **CI/CD** validation and reducing manual testing effort.
- Collaborating with architecture and platform engineering teams on legacy-to-cloud migration initiatives, contributing to **Spring Boot** service refactoring and **OpenTelemetry**-based instrumentation, structured logging, and production monitoring to improve observability and production diagnostics across backend services.

Azul Arc - Software Engineer (Contract), Atlanta, GA

Nov 2025 - Feb 2026

- Engineered full-stack features for Casehub, a multi-tenant case management platform serving Wisconsin state agencies, translating **Figma** designs into **React** and **TypeScript** user experiences while building **Node.js/Express APIs** and **PostgreSQL**-backed backend functionality.
- Integrated **Okta** Single Sign-On using **OAuth 2.0** and **OpenID Connect**, implementing role-based access control across admin, agency, and public portal user types to enforce permission boundaries for government agency data.
- Established backend integrations with third-party services using **REST APIs** and **webhook**-driven workflows, and optimized **PostgreSQL** queries and indexing strategies, reducing API response times by approximately 25% for high-volume case management operations.
- Streamlined build and deployment pipelines using **Docker** and **Jenkins** while supporting **AWS**-hosted production environments, improving deployment consistency and reducing release-related issues.

JP Morgan Chase- AI Software Engineer (Contract), New York, NY

Jun 2025 - Nov 2025

- Contributed backend features to JP Morgan Chase's internal LLM platform serving 230,000+ employees, using **Python**, **FastAPI**, **Django**, **AWS Bedrock**, **DynamoDB**, and **Kubernetes** to support document search, research summarization, and employee productivity workflows.
- Helped design retrieval and context generation workflows using **Amazon OpenSearch Service** for enterprise knowledge sources, contributing to the team's broader effort to improve response relevance for internal research and document analysis use cases.
- Enhanced prompt templates and response processing pipelines for **Claude** based applications, implementing structured JSON outputs and document chunking strategies to improve downstream processing reliability.

Airpay Financial Technologies - Software Engineer, Mumbai, India

Sep 2021 - Jul 2023

- Developed and implemented **GraphQL APIs** using **Node.js** and **Python** for mobile and web applications supporting Domestic Money Transfer (DMT) and Cash Management Service (CMS) modules on Airpay Vyaapaar's platform, with **JWT**-based authentication to secure merchant-facing APIs.
- Integrated third-party banking APIs to extend payment functionality across online and offline merchants.
- Migrated transaction logging from **Azure Functions** to **AWS Lambda** in 3 days, reducing log lookup and debugging time by approximately 25% and ensuring consistent reliability for RBI-regulated financial transactions.
- Built and maintained **React** frontend components for merchant facing workflows and contributed to an internal admin portal using **PHP** and **Laravel**, introducing a generic component library for CRUD operations that cut new feature development time by approximately 30%.
- Worked across **MySQL**, **MariaDB**, and **MongoDB** for data modeling, and deployed and monitored services using **AWS EC2**, **S3**, **SQS**, **CloudWatch**, and **Jenkins**-based **CI/CD** pipelines.

- Assisted in implementing backend features for JioSaavn and JioMeet using **Java**, **Spring Boot**, **REST APIs**, and **Spring JPA**, supporting high-traffic consumer applications and new product capabilities.
- Built reusable **React** components and integrated them with backend APIs, applying modern frontend development practices to deliver responsive user experiences across multiple application modules.
- Improved backend performance through optimized API implementations, **SQL** queries, and database interactions, contributing to an approximate 25% reduction in response latency during peak traffic.
- Maintained event-driven backend services using **Apache Kafka**, **Redis**, and **PostgreSQL**, leveraging **Datadog APM** to investigate production bottlenecks and improve system performance.
- Expanded automated test coverage with **JUnit** and **Mockito**, participating in **TDD** workflows, **Jenkins**-based **CI/CD** pipelines, and **SonarQube** code quality reviews to strengthen release confidence.

PROJECTS

Edusummarizer (Python, Cerebras API, FAISS, Next.js, MongoDB, TypeScript) [GitHub](#)

- Built LLM-powered RAG platform for semantic search over lecture transcripts.
- Implemented vector embeddings with FAISS for similarity-based retrieval and designed a multi-stage prompt orchestration framework covering transcription, summarization, and interactive Q&A with streaming responses.

AI Prompt Gateway (Go, Gin, PostgreSQL, Redis)

- Built a Go REST API that routes prompts across multiple LLM providers with concurrent fan-out using goroutines, Redis caching, and PostgreSQL-backed request logging.

TECHNICAL SKILLS

- **Programming Languages:** Java, Go, Python, JavaScript, TypeScript, C, C#, SQL, HTML, CSS
- **Frameworks & Libraries:** Spring Boot, Spring JPA, Hibernate, Gin, FastAPI, Django, React, React Native, Node.js, Express.js, Next.js, PHP, Laravel
- **Tools:** MySQL, PostgreSQL, MariaDB, MongoDB, Redis, Git, Jenkins, Maven, Docker, Kubernetes, GraphQL, Jira, ClickUp, Figma, Postman, Linux
- **Cloud & AI:** AWS (EC2, S3, SQS, Lambda, Bedrock, DynamoDB, OpenSearch, CloudWatch), Azure, RAG Pipelines, FAISS, Cerebras API, Claude Code, Kafka, OpenTelemetry, Datadog
- **Testing & QA:** JUnit, Mockito, Jest, Supertest, SonarQube, TDD
- **Security & Auth:** Okta SSO, OAuth 2.0, OpenID Connect, RBAC, JWT

EDUCATION

California State University Long Beach

Aug 2023 - May 2025

Master of Computer Science

University Of Mumbai

Aug 2016 - Oct 2020

Bachelor of Engineering in Information Technology
