SUMMARY

Full Stack Developer with 3.5 years of experience in Finance, Healthcare, and Enterprise domains. Skilled in Java (8/17), Spring Boot, Hibernate, JPA, RESTful APIs, and microservices with Kafka/RabbitMQ. Proficient in frontend development using React.js, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, and Tailwind CSS. Experienced with MySQL, PostgreSQL, MongoDB, AWS (EC2, S3, RDS), Docker, Kubernetes, and CI/CD pipelines (Jenkins, GitHub Actions, GitLab). Strong knowledge of Spring Security, OAuth2, and JWT, ensuring secure, scalable applications. Well versed in Agile methodologies and the full Software Development Life Cycle (SDLC).

SKILLS

Programming Languages: Python, Java, C++, JavaScript, TypeScript, SQL

Databases: PostgreSQL, MySQL, MongoDB, SQLite, Redis

Frontend Technologies: React.js, Angular (12+), TypeScript, JavaScript (ES6+), HTML5, CSS3, Bootstrap, Tailwind CSS

Backend Technologies: Node.js, Express.js, Java (Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Apache Kafka, Microservices Architecture)

Version Control & Dev Tools: Git, GitHub, GitLab, Docker, VS Code, Maven, Gradle

Cloud & DevOps: AWS (EC2, S3, Lambda), CI/CD (GitHub Actions, Jenkins, Maven, Gradle, Kubernetes, OpenShift)

Testing & Quality: JUnit, PyTest, Selenium, Postman, Unit Testing, Mockito, TestNG

Security & API Management: Spring Security, OAuth2, JWT, RBAC, API Gateway Management

Agile & Collaboration: Agile/Scrum, Jira, Confluence

PROFESSIONAL EXPERIENCE

CVS Health, Irving, Texas May 2024 – Present

Full Stack Developer

- Designed and deployed RESTful APIs for appointment scheduling, patient records, and lab reports, implementing Postman driven API testing and query optimizations that improved response times by 25%, enhancing the healthcare experience for thousands of daily users and reducing system downtime.
- Enhanced patient care workflows by developing and scaling microservices with Spring Boot, Spring MVC, and Spring WebFlux, modularizing business logic and improving feature delivery by 30% across telemedicine, EMR/EHR, and patient management platforms, integrating legacy systems.
- Implemented security and compliance frameworks with JWT, OAuth2, and role based access control (RBAC), reducing unauthorized access incidents by 40% and ensuring HIPAA and HITRUST compliance, while integrating audit logs for regulatory reporting.
- Architected event driven pipelines using Kafka and RabbitMQ for real time patient monitoring, medical alerts, and billing workflows, processing 100,000+ events/hour and decreasing notification latency by 50%, improving overall operational efficiency.
- Migrated and containerized legacy monolithic healthcare systems into microservices using Docker, Kubernetes, and AWS ECS, improving fault isolation, reducing release downtime by 35%, and enabling faster deployment of critical patient facing features.
- Streamlined CI/CD pipelines with Jenkins, GitHub Actions, and Argo CD, automating build, test, and deployment workflows, reducing release cycles by 50%, and improving deployment reliability across staging and production environments.
- Optimized AWS cloud infrastructure (EC2, S3, RDS, Lambda, CloudWatch), implementing lifecycle policies, automated backups, and disaster recovery plans that reduced operational costs by 20%, while ensuring 99.9% uptime for essential healthcare systems during peak usage.
- Boosted database performance and migrated schemas from MySQL to PostgreSQL implementing advanced indexing, partitioning, and query tuning, which reduced data retrieval latency by 35% and improved analytics reporting accuracy for patient records and dashboards.

Hexaware Technologies, India

May 2021 – Jul 2023

Full Stack Developer

- Engineered backend microservices with Java 8/17, Spring Boot, Hibernate, and Node.js, processing over 3 million financial transactions annually, ensuring high availability, reducing failed transaction rates by 25%, and enabling seamless integration with core banking and partner investment systems.
- Fine Tuned PostgreSQL database, including advanced indexing, query tuning, and migration from legacy MySQL systems, supporting 15 TB+ of transactional and reporting data, reducing complex financial report generation time from 15 minutes to under 4.
- Applied real time processing pipelines using Apache Kafka, handling 50,000+ trade alerts, fund transfers, and transaction notifications per day, allowing traders and compliance teams to respond faster, reducing operational delays by 30%.
- Developed enterprise grade trading and investment portals with React.js, Node.js, TypeScript, and GraphQL, enabling 20,000+ daily users to track portfolios, execute trades, and generate financial reports, while reducing page load times by 35% and improving overall user satisfaction.
- Deployed containerized finance microservices on AWS (EC2, S3, RDS) using Docker and Kubernetes, ensuring 24/7 system availability across multiple regions, cutting downtime incidents by 60%, and maintaining SOC2 and PCI DSS compliance.
- Built RESTful APIs and GraphQL endpoints connecting banking systems, payment gateways, and investment platforms, securely managing 500,000+ customer records daily, eliminating manual reconciliations, and improving financial data accessibility.
- Automated CI/CD pipelines with Jenkins, GitHub Actions, and GitLab, enabling bi weekly releases for enterprise finance applications, cutting release downtime by 50%, improving deployment accuracy, and lowering operational risks across mission critical systems.
- Improved enterprise security frameworks using Spring Security, OAuth2, and JWT, implementing role based access controls, multi factor authentication, and audit logging, reducing unauthorized access incidents by 40% and ensuring SOX and FINRA compliance.
- Refined automated testing and API verification with JUnit, Postman, and Selenium, executing 4,000+ regression test cases per release cycle, reducing production defects by 35% and improving overall reliability of trading and banking applications.

PROJECTS

Food Delivery Web Application Technologies: *Java 8, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Maven, MySQL, RESTful APIs, React.js, HTML5, CSS3, JavaScript (ES6), Bootstrap, JUnit, Mockito*

- Constructed and deployed a full stack food delivery platform with Spring Boot microservices backend and React.js responsive frontend, enabling restaurant listings, real time order placement, and secure payment processing, significantly enhancing user engagement and overall customer satisfaction.
- Created, implemented, and integrated RESTful APIs for authentication, cart management, and order processing, consumed on the frontend using Axios for efficient real time updates, reducing API response latency and improving reliability and user experience.
- Formed MySQL database schemas using Spring Data JPA/Hibernate for customers, restaurants, and orders, improving query performance, ensuring seamless data consistency, and supporting scalable, high performance application workflows.

NBA Management System Technologies: *Java, JDBC, MySQL, HTML5, CSS3, Bootstrap, MVC Architecture*

- Built and deployed a full stack NBA management web application enabling comprehensive tracking of team and player statistics with real time CRUD operations, reducing manual data entry efforts by 40% and significantly improving operational efficiency.
- Executed, implemented, and automated an intelligent scheduling system to generate and update game schedules, cutting schedule creation time by 60% and ensuring accurate, timely match planning for teams and administrators.
- Applied secure role based authentication and executed parameterized JDBC queries to prevent SQL injection vulnerabilities, enhancing system security, ensuring reliable data integrity, and reducing unauthorized access attempts by 30%.

EDUCATION

Master of Science in Computer Science

Illinois Institute of Technology, Chicago, IL
